Lipids in Health and Disease Peter Quinn, Xiaoyuan Wang, 2008-08-27 Lipids are functionally versatile molecules They have evolved from relatively simple hydrocarbons that serve as depot storages of metabolites and barriers to the permeation of solutes into complex compounds that perform a variety of signalling functions in higher organisms This volume is devoted to the polar lipids and their constituents We have omitted the neutral lipids like fats and oils because their

function is generally to act as deposits of metabolizable substrates The sterols are also outside the scope of the present volume and the reader is referred to volume 28 of this series which is the subject of cholesterol The polar lipids are comprised of fatty acids attached to either glycerol or sphingosine The fatty acids themselves constitute an important reservoir of substrates for conversion into families of signalling and modulating molecules including the eicosanoids amongst which are the prostaglandins thromboxanes and leucotrienes The way fatty acid metabolism is regulated in the liver and how fatty acids are desaturated are subjects considered in the first part of this volume This section also deals with the modulation of protein function and inflammation by unsaturated fatty acids and their derivatives New insights into the role of fatty acid synthesis and eicosenoid function in tumour progression and metastasis are presented

Fatty Acids in Foods and Their Health Implications Ching Kuang Chow,1992 Discusses the chemistry and composition of fatty acids in foods and their biological and health effects Includes such topics as fatty acid classification and nomenclature chemical and physical properties of fatty acids genetic alteration of food fats and oils effects of processing and storage on fatty acids in edible oils commercial applications of fatty acid derivatives fatty acids and membrane function biological effects of palm oil in humans fatty acids and cardiovascular diseases cancer renal disease etc

Nutraceutical and Specialty Lipids and their Co-Products Fereidoon Shahidi,2006-03-14 While certain saturated and trans fats continue to face scrutiny as health hazards new evidence indicates that in addition to supplying foods with flavor and texture fats also provide us with dietary components that are absolutely critical to our well being The importance of essential fatty acids and fat soluble vitamins and other minor

Handbook of Lipids in Human Function Ronald Ross Watson,Fabien De Meester,2015-12-09 Handbook of Lipids in Human Function Fatty Acids presents current research relating to health issues whose impact may be modified by adopting personalized diets and lifestyle interventions of the consumption of fatty acids Addressing cardiovascular and neurological diseases as well as cancer obesity inflammatory conditions and lung disease the authors correlate lipid sources with specific conditions providing important insights into preventative as well as response based actions designed to positively impact health outcomes The material is presented in 29 chapters and brings together the research and work of an international team of experts designed to bridge the gap between traditional approaches to dietary interventions and leading edge integrated health strategies Handbook of Lipids in Human Function Fatty Acids is a valuable resource for researchers and clinicians Discusses the importance of essential fatty acids in maintaining cardio and cerebro vascular health Explains the metabolic risks associated with deficiencies and or imbalance of essential fatty acids Explores the promise of essential fatty acids as adjuvants to pharmacopoeia Suggests interventions with personalized lipid diets

The Importance of Immunonutrition M. Makrides, J. B. Ochoa, H. Szajewska, 2013 A pediatric perspective Our daily food intake not only provides the calories and the macro and micronutrients necessary for survival nutrients also have a tremendous potential to modulate the actions of the immune system a fact which has a significant impact on public health and clinical practice This book presents the latest findings on how nutrient status can modulate immunity and improve health conditions in pediatric patients Divided into three parts it covers major aspects of the interplay between nutrients and the regulation of immunity and inflammatory processes Part one deals with the pharmaceutical value of specific amino acids arginine and glutamine and hormones for addressing immune disorders and infant development The second part revolves around gut function and immunity and the right balance of probiotics The final part explores the role of lipid mediators and how their types and proportions can tip the balance in favor of health and disease

Studies on Biomarkers and New Targets in Aging Research in Iran Paul C. Guest, 2021-07-31 The Middle East is known as the cradle of civilization It was the crossroads of ancient empires and the birthplace of major world religions Today it is the center of many world issues due to its economic religious and political importance Although it has lagged behind many other regions of the world in medicinal research this has increased dramatically in recent years with increasing numbers of relevant publications and the country of Iran has spearheaded this progress Much of the research has focused on increasing our understanding of the aging process and attempting to identify biomarkers and natural products to improve the human healthspan This book provides a comprehensive overview of the research conducted in the Middle East on the health benefits of curcumin a phytochemical derived from the famous spice turmeric Hundreds of studies have now been published describing the health benefits of this spice The importance of this research is exemplified by poor data regarding health and longevity as only 0.08% of the population in Iran consists of individuals over 90 years of age This is approximately 10 times lower than the percentage of this same age group in the United Kingdom and the United States of America and almost 20 times lower than that in Japan This book presents a series of reviews and meta studies describing

research which has resulted in identification potential new biomarkers and drug targets for age related disorders All of the studies have focussed on the testing of curcumin and related products which have already shown some promising leads in age related conditions such as heart disease diabetes cognitive impairment and cancer The authors in this series come from different centers and cities of Iran including Mashhad Tehran Isfahan Ahvaz Birjand Quchan and Yazd and many of the chapters feature collaborations with other countries of the Middle East and throughout the world including Brazil Italy Mexico Oman Poland Switzerland the United Kingdom and the United States of America This underscores the emergence of the Middle East into this arena of research The book will be of high interest to scientific and clinical researchers in the subject of aging and age related disease and to physicians and pharmaceutical company scientists since it gives insights into the latest strategies biomarkers and targets involved in the mechanism of action of curcumin to promote healthy aging It will also provide important information on disease mechanisms related to age related disorders as each chapter will be presented in the context of specific chronic diseases

Intervention Effects of Food-derived Polyphenols and Bioactive Peptides on Chronic Inflammation Lei Zhang, Danila Cianciosi, Jiao Jiao Zhang, Md Obaidul Islam, 2024-10-01 The industrial revolution brought about significant changes in society the environment and lifestyle including a modern diet high in processed foods refined grains and low in fruits vegetables and fibers This dietary imbalance can alter the composition of the gut microbiota and immune epigenetics leading to low grade endotoxemia and chronic inflammation which can cause DNA damage dysfunctional telomeres epigenomic disruption mitogenic signals and oxidative stress This can ultimately lead to various diseases including cardiovascular disease cancer diabetes mellitus chronic kidney disease non alcoholic fatty liver disease autoimmune diseases and neurodegenerative disorders and can cause disability and mortality Many studies including multi dimensional and omics have investigated the links between chronic inflammation and disease risk The health benefits of polyphenols and bioactive peptides from food sources have been recognized for centuries and these compounds have been proven to have multiple health benefits and counteract chronic inflammation

The Fats of Life Glen D. Lawrence, 2013-02-26 Omega 3s trans fats polyunsaturated fatty acids linoleic acid research facts about fatty acids and their relationship to heart disease and atherosclerosis obesity cancer and neurological disorders abound Chemical names appear on every nutrition label But just what do these terms mean in health and disease The Fats of Life delineates the importance of essential fatty acids with a focus on distinctions between omega 3 and omega 6 fatty acid variants The chemical and biochemical characteristics of these fatty acids and their metabolism to a vast array of potent bioactive messengers are described in the context of their potential effects on general health and impact on various diseases and neurological disorders Glen D Lawrence addresses in detail the capacity for polyunsaturated fatty acids to influence asthma atherosclerosis heart disease inflammation cancer and immunity Lawrence makes clear that our understanding of the biochemical and physiological effects of dietary fats has advanced tremendously as a result of careful research but he also

Billman, The cardiovascular benefits of dietary omega 3 polyunsaturated fatty acids n 3 PUFA have been actively investigated for nearly 40 years Beginning with the pioneering studies of Bang and Dyerberg epidemiological data provide strong evidence for an inverse relationship between fatty fish consumption and cardiac mortality In contrast to these observational studies interventional studies using n 3 PUFAs for the secondary prevention of adverse cardiovascular events in patients with heart disease have yielded conflicting results some studies have reported reduced sudden cardiac death or mortality while other more recent studies have reported either no effect or an increase in adverse cardiac events Nevertheless the American Heart Association and the American College of Cardiology continue to recommend fish oils for the secondary prevention of coronary artery disease Based in part upon these recommendations consumer demand for n 3 PUFA products both nutritional supplements and foods enriched with these lipids has exploded In the United States alone it has been estimated that in 2004 5 10% of the adult U S population were taking a fish oil supplement with annual sales growth of 40% In fact the sales of these products are projected to exceed 7 billion dollars by the end of 2011 www.marketresearch.com product reports Despite the extensive marketing of fish oil products a scientific consensus on the effects of n 3 PUFA on cardiac rhythm has yet to be reached It is the purpose of this Research Topic to stimulate a discussion on the putative benefits of n 3 PUFAs on cardiac rhythm Authors are invited to submit clinical translational or experimental research articles reviews and hypotheses that address the actions of n 3 PUFA positive negative or neutral on cardiac rhythm and cardiac electrophysiology Studies that evaluate the effects of n 3 PUFA on myocyte electrical properties atrial fibrillation ventricular fibrillation and heart rate variability are particularly welcome
