Health Risks from Dioxin and Related Compounds National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on EPA's Exposure and Human Health Reassessment of TCDD and Related Compounds, 2006-10-20 Although the U S Environmental Protection Agency presented a comprehensive review of the scientific literature in its 2003 draft reassessment of the risks of dioxin the agency did not sufficiently quantify the uncertainties and variabilities associated with the risks nor did it adequately justify the assumptions used to estimate them according to this new report from the National Academies National Research Council The committee that wrote the report recommended that EPA re estimate the risks using several different assumptions and better communicate the uncertainties in those estimates The agency also should explain more clearly how it selects both the data upon which the reassessment is based and the methods used to analyze them

Analysis of Chemical Contaminants in Food Claudio Medana, 2020-07-03 How many times have we thought with concern about the possible contamination of food Pollution agricultural treatments technological treatments and packaging are the best known human sources of toxic substances as food contaminants The present book contains 11 original research papers representing various approaches of identifying and measuring toxic residues in food materials The analytical determination of food contaminants is an indispensable tool in characterizing the adverse effects and unexpected toxicity related to food intake No risk assessment would be possible without data from the analysis of food contaminants This Special Issue is an interesting overview of recent methods and is highly representative of a broad worldwide outline collecting authors from ten different countries and four continents Very different toxics are described from volatile organic compounds to heavy metals and from highly polar chemicals to classical organic contaminants A wide range of analytical techniques are portrayed including sample preparation and clean up methodologies classical chromatographic and hyphenated spectroscopies and the latest high resolution mass spectrometry applications The presented works consider a varied selection of foods the studied matrices are meat fishery products fruits and miscellaneous beverages

Environmental Health Criteria ,1976 *Organochlorine* Aurel Nuro, 2018-10-24

Organochlorines OC are organic molecules with chlorine in their structure There is a large number of organochlorine compounds known Large amounts of chlorinated organic compounds are produced for industrial agricultural pharmaceutical household purposes etc In many studies the main focus is on OC that have been evaluated as environmental contaminants with toxic effects on humans Different types of organochlorines have been produced throughout the world Some of the most popular classes are organochlorine pesticides OCPs polychlorinated biphenyls PCBs dioxins chlorobenzenes chlorophenols chlorinated alkanes etc Organochlorine compounds are very stable Generally they are molecules of moderate polarity low solubility in water This makes OCs easily soluble in fats They are found in almost all environments air water soil sediments and biota samples They can spread out easily in different geographic altitudes and latitudes Volatile and semi volatile OCs have the ability to travel far distances from the place where they were used Some studies have reported some organochlorines in the North Pole at the same levels as the areas where they were produced or applied They have the ability to bioaccumulate easily in biota Passing through the food chain levels they increase their concentrations biomagnifying The main access pathways for OCs to the human body are through foods and exposures Generally they display their effects after a relatively long period of exposure This is the main reason why they were produced and used for a long time before their production and use was banned The most important health effects that organochlorines can cause are mutagenic endocrine disruptor carcinogenic and central nervous or peripheral disorders After identification of the consequences production of OCs and use was banned in many countries but their effects are still being seen many years later

Melber,J. Kielhorn,World Health Organization,International Program on Chemical Safety,1998 This book evaluates the risks to human health and the environment posed by exposure to polybrominated dibenzo p dioxins PBDDs and polybrominated dibenzofurans PBDFs Of no commercial use these compounds are generated as unwanted by products in various industrial and combustion processes and have been detected as contaminants in a number of brominated organic chemicals many of which are used as flame retardants Thermolysis of brominated flame retardants is an important source of emissions as is the incineration of products containing these flame retardants most notably scrap computers and business machines PBDDs and PBDFs have also been detected in emissions of motors using both leaded petrol and unleaded petrol with and without catalytic converters and in emissions of diesel engines In view of the complexity of these compounds the problems with analytical procedures and

substantial gaps in the experimental database the report makes a special effort to determine the extent to which the environmental behaviour and toxic effects of PBDDs and PBDFs resemble those of their better characterized chlorinated analogues polychlorinated dibenzo p dioxins PCDDs and polychlorinated dibenzofurans PCDFs An effort is also made to determine the extent to which PBDDs and PBDFs contribute to the overall hazard posed by environmental dioxins The Atmospheric Chemistry of Polybrominated Dibenzo-p-dioxins and Dibenzofurans Christopher Charles Lutes,1991
