 of Medicine London in September 1960 This book is a collection of selected reports from participating members of The
 International Society of Biometeorology The compendium covers a wide range of issues related to the study of the direct and
 indirect interrelations between the geophysical and geochemical factors of the atmospheric environment and living
 organisms plants animals and human The book is divided into four main sections themes are selected for the congress The
 first theme covers topics on high altitude bioclimatology such as the physiological aspects of life at extreme altitudes The
 second theme is about tropical bioclimatology or aspects of plant and animal life in tropical climates The third deals with
 bioclimatological classifications which is about the relations between the climate and the distribution of the living species on
 the Earth The fourth theme meteorological forecasting discusses the consequences of anticipated meteorological
 conditions and weather types on living organisms The text will be of use to biologists health professionals zoologists botanists

 Primault, 2012-12-06 Agrometeorology is a comparatively young science The beginnings of agrometeorological work came in
 the 20 s of this century when agrometeorology was a working branch of climatology In the years following 1950 it then
 developed widely to an independent science In this process agrometeorology has not only gained a vast knowledge of the
 influence of meteorological conditions on plants and livestock in agriculture and damage prevention but additionally evolved
 new advisory methods which are of great practical use in agriculture Up to the present time there has been practically no
 specific training for an agrometeorologist Agrometeorologists are drawn according to their training from the ranks of
 general meteorology or from agriculture and its related biological disciplines They must therefore themselves gather the
 knowledge for their agrometeorological work and combine for themselves the complex of agrometeorology from biological
 and meteorological information This is usually far from easy as the relevant literature is scattered among the most widely
 differing journals partly in little known foreign languages and is thus very difficult of access Comprehensive writings are to
 be found only in very few partial fields of agrometeorology The subject of training problems has thus been treated as of
 utmost importance at the meetings of the Commission for Agrometeorology CAgM of the World Meteorological Organization
 WMO especially as agrometeorology has won such great significance and usefulness not only in the so called
 underdeveloped countries in advancing a more productive agriculture but also in countries whose agricultural standard is
