Efficient And Adaptive Estimation For Semiparametric Models:

   Efficient and Adaptive Estimation for Semiparametric Models Peter J. Bickel,Chris A.J. Klaassen,Ya'acov Ritov,Jon A. Wellner,1998-06-01 This book deals with estimation in situations in which there is believed to be enough information to model parametrically some but not all of the features of a data set Such models have arisen in a wide context in recent years and involve new nonlinear estimation procedures Statistical models of this type are directly applicable to fields such as economics epidemiology and astronomy   **Estimation in Semiparametric Models** Johann Pfanzagl,2012-12-06 Assume one has to estimate the mean J x P dx or the median of P or any other functional t P on the basis ofi i d observations from P Ifnothing is known about P then the sample mean is certainly the best estimator one can think of If P is known to be the member of a certain parametric family say Po E e one can usually do better by estimating first say by n and using J XPo n r dx as an estimate for J xPo dx There is an intermediate range where we know something about the unknown probability measure P but less than parametric theory takes for granted Practical problems have always led statisticians to invent estimators for such intermediate models but it usually remained open whether these estimators are nearly optimal or not There was one exception The case of adaptivity where a nonparametric estimate exists which is asymptotically optimal for any parametric submodel The standard and for a long time only example of such a fortunate situation was the estimation of the center of symmetry for a distribution of unknown shape   **Asymptotics, Nonparametrics, and Time Series** Subir Ghosh,1999-02-18 Contains over 2500 equations and exhaustively covers not only nonparametrics but also parametric semiparametric frequentist Bayesian bootstrap adaptive univariate and multivariate statistical methods as well as practical uses of Markov chain models   *Selected Works of Peter J. Bickel* Jianqing Fan,Ya'acov Ritov,C.F. Jeff Wu,2012-11-28 This volume presents selections of Peter J Bickel s major papers along with comments on their novelty and impact on the subsequent development of statistics as a discipline Each of the eight parts concerns a particular area of research and provides new commentary by experts in the area The parts range from Rank Based Nonparametrics to Function Estimation and Bootstrap Resampling Peter s amazing career encompasses the majority of statistical developments in the last half century or about about half of the entire history of the systematic development of statistics This volume shares insights on these exciting statistical developments with future generations of statisticians The compilation of supporting material about Peter s life and work help readers understand the environment under which his research was conducted The material will also inspire readers in their own research based pursuits This volume includes new photos of Peter Bickel his biography publication list and a list of his students These give the reader a more complete picture of Peter Bickel as a teacher a friend a colleague and a family man   **Identification and Inference for Econometric Models** Donald W. K. Andrews,James H. Stock,2005-07-04 This 2005 volume contains the papers presented in honor of the lifelong achievements of Thomas J Rothenberg on the occasion of his retirement The authors of the chapters include many of the leading econometricians of our

day and the chapters address topics of current research significance in econometric theory The chapters cover four themes identification and efficient estimation in econometrics asymptotic approximations to the distributions of econometric estimators and tests inference involving potentially nonstationary time series such as processes that might have a unit autoregressive root and nonparametric and semiparametric inference Several of the chapters provide overviews and treatments of basic conceptual issues while others advance our understanding of the properties of existing econometric procedures and or propose others Specific topics include identification in nonlinear models inference with weak instruments tests for nonstationary in time series and panel data generalized empirical likelihood estimation and the bootstrap

Zubizarreta,Elizabeth A. Stuart,Dylan S. Small,Paul R. Rosenbaum,2023-04-11 An observational study infers the effects caused by a treatment policy program intervention or exposure in a context in which randomized experimentation is unethical or impractical One task in an observational study is to adjust for visible pretreatment differences between the treated and control groups Multivariate matching and weighting are two modern forms of adjustment This handbook provides a comprehensive survey of the most recent methods of adjustment by matching weighting machine learning and their combinations Three additional chapters introduce the steps from association to causation that follow after adjustments are complete When used alone matching and weighting do not use outcome information so they are part of the design of an observational study When used in conjunction with models for the outcome matching and weighting may enhance the robustness of model based adjustments The book is for researchers in medicine economics public health psychology epidemiology public program evaluation and statistics who examine evidence of the effects on human beings of treatments policies or exposures **Asymptotic Statistics** A. W. van der Vaart,2000-06-19 This book is an introduction to the field of asymptotic statistics The treatment is both practical and mathematically rigorous In addition to most of the standard topics of an asymptotics course including likelihood inference M estimation the theory of asymptotic efficiency U statistics and rank procedures the book also presents recent research topics such as semiparametric models the bootstrap and empirical processes and their applications The topics are organized from the central idea of approximation by limit experiments which gives the book one of its unifying themes This entails mainly the local approximation of the classical i i d set up with smooth parameters by location experiments involving a single normally distributed observation Thus even the standard subjects of asymptotic statistics are presented in a novel way Suitable as a graduate or Master s level statistics text this book will also give researchers an overview of research in asymptotic statistics **Orthonormal Series Estimators** Odile Pons,2020-01-22 The approximation and the estimation of nonparametric functions by projections on an orthonormal basis of functions are useful in data analysis This book presents series estimators defined by projections on bases of functions they extend the estimators of densities to mixture models deconvolution and inverse problems to semi parametric and nonparametric models for regressions hazard functions and diffusions They are estimated in the Hilbert spaces with respect to the distribution function of the regressors and their optimal rates of convergence are proved Their mean square errors depend on the size of the basis which is consistently estimated by cross validation Wavelets estimators are defined and studied in the same models The choice of the basis with suitable parametrizations and their estimation improve the existing methods and leads to applications to a wide class of models The rates of convergence of the series estimators are the best

among all nonparametric estimators with a great improvement in multidimensional models Original methods are developed for the estimation in deconvolution and inverse problems The asymptotic properties of test statistics based on the estimators are also established   Statistical Inference for Ergodic Diffusion Processes Yury A. Kutoyants,2013-03-09 The first book in inference for stochastic processes from a statistical rather than a probabilistic perspective It provides a systematic exposition of theoretical results from over ten years of mathematical literature and presents for the first time in book form many new techniques and approaches   Asymptotic Analysis of Mixed Effects Models Jiming Jiang,2017-09-19 Large sample techniques are fundamental to all fields of statistics Mixed effects models including linear mixed models generalized linear mixed models non linear mixed effects models and non parametric mixed effects models are complex models yet these models are extensively used in practice This monograph provides a comprehensive account of asymptotic analysis of mixed effects models The monograph is suitable for researchers and graduate students who wish to learn about asymptotic tools and research problems in mixed effects models It may also be used as a reference book for a graduate level course on mixed effects models or asymptotic analysis
