Trudy i materialy nauchnykh kongressov i soveshchaniĭ, opublikovannye za rubezhom v ... gg, 1987 *Directory of Published Proceedings*, 1990 *Subject Guide to Books in Print*, 1997 *Eicosanoids, Apolipoproteins, Lipoprotein Particles, and Atherosclerosis* Claude L. Malmendier, Petar Alaupovic, 2012-12-06 Plasma lipoproteins constitute a unique macromolecular system of lipid protein complexes responsible for the transport of lipids from their sites of origin to their sites of utilization either as metabolic fuel or as structural components of cell membranes Although studies on the role of lipoproteins in the mechanism of lipid transport are meritorious in their own right the ever increasing interest in chemical and functional properties of this remarkable class of conjugated proteins stems from the impressive evidence of their direct involvement in the genesis and development of atherosclerotic lesions The initial emphasis on neutral lipids and phospholipids as the most characteristic constituents of operationally defined lipoprotein classes has shifted in recent years to their protein moieties or apolipoproteins The discovery of a number of apolipoproteins and characterization of familial hypolipoproteinemias as apolipoprotein deficiency disorders indicated that apolipoproteins play an essential role in maintaining the structural stability and integrity of lipoprotein particles In addition to their role in the formation of lipoproteins apolipoproteins were shown to perform a variety of functions in metabolic conversion of lipoproteins and their interactions with cellular surfaces Results from several laboratories have demonstrated that the chemical and metabolic heterogeneity of operationally defined lipoprotein classes is due to the presence of several discrete lipoprotein particles with similar physical properties but different and characteristic apolipoprotein composition Thus the apolipoproteins have emerged not only as essential structural and functional constituents of lipoproteins but also as unique chemical markers for identifying and classifying lipoprotein particles *Eicosanoids, Apolipoproteins, Lipoprotein Particles, and Atherosclerosis* Claude L Malmendier, Petar Alaupovic, 1989-02-01 **Lipoproteins and Atherosclerosis** Claude L. Malmendier, P. Alaupovic, 2012-12-06 Atherosclerosis which accounts in Western Europe for more than 40 % of deaths is a generalized disease that develops slowly and is symptomless until lesions have become sufficiently severe to cause myocardial or cerebral infarction Research on specific and precocious markers of atherosclerosis and the development of non invasive techniques for their early detection represent major challenges in biomedical field We hope that this volume of edited papers a consequence of the third international colloquium on atherosclerosis conducted at the University of Brussels Belgium through the support of the Fondation de Recherche sur l'AtherosclE rose will contribute to this goal Among the topics discussed the major ones were the mechanism of action of lipolytic enzymes the deficiency or dysregulation of cellular receptors the genetic deficiencies of apolipoproteins and the panoply of external factors as diet physical exercise drugs which modify the lipoprotein metabolism Special interest was also devoted to potent techniques as kinetic analysis of metabolic

tracers and use of monoclonal antibodies Their contribution to the detection and treatment of atherosclerosis will be obviously essential in the future

Structure and Function of Apolipoproteins Maryvonne Rosseneu,1992-08-14
Structure and Function of Apolipoproteins presents a comprehensive review of the primary and secondary structure of apolipoproteins The book discusses the structure of the apolipoprotein gene family and genetic variation occurring at the protein level Functional properties of apolipoproteins including lipid binding enzyme co factor activity antigenic properties and receptor ligand interactions are extensively described and analyzed in relation to their structural features Physiological properties of apolipoproteins and their role in biology and medicine are also examined Anyone who is interested in apolipoproteins or is conducting research on atherosclerosis should consider this volume an essential reference

Apolipoproteins in Lipid Disorders Maryvonne Rosseneu,Kurt Widhalm,Jochen Jarausch,2012-12-06 There is increasing evidence for the clinical value of the apo lipoprotein measurements Besides cholesterol in plasma and li poprotein fractions which is currently used as an indicator of cardiovascular risk the measurement of the AI and B apolipoproteins can provide additional information about the patients clinical status Several studies show that apo B is higher and apo AI is lower in patients with angiographically documented coronary heart disease than in symptomatic patients without coronary heart disease Moreover discriminant analysis indicated that the concentration of Apo AI and B in plasma are better discriminators than lipo protein cholesterol for identifying patients with coronary heart disease In some studies the apo B/apo AI ratio appears to be a more powerful predictor than individual lipoproteins In a recent study carried out in men apolipoproteins AI and B were better correlated with the severity of cardiovascular disease than HDL and LDL cholesterol The predictive power of apolipoproteins could however not be demonstrated in all studies and the value of apolipoprotein measurements in the field of clinical chemistry is still controversial This is probably due to discrepancies between the results of various studies arising from differences in the type of immunoassays the lack of universal reference materials differences between study protocols variations in the selection of patients and in the grading and interpretation of coronary lesions

Laboratory Markers of Risk for Cardiovascular Disease: Lipoprotein, an Issue of Clinics in Laboratory Medicine Donald Smith,2006 Development of new drugs and research on biology on the molecular level is developing so rapidly that many new techniques cannot be manually performed The assistance of laboratory robotics is essential to the future of processing lab specimens as well as giving tremendous benefits such as providing a completely sterile lab environment at all times and cutting down on problems that arise from human error This issue deals with many of these advantages in this small but quickly expanding area of Laboratory Medicine
