*Einstein in Spain* Thomas F. Glick, 2014-07-14 From 1900 to 1924 Spain experienced a stage of vigorous academic freedom and unfettered scientific inquiry that strikingly contrasted with the repressive atmosphere of the periods before and after Thomas Glick explores this recovery of science by focusing on the national discussion provoked by Einstein's trip to Spain in 1923 His visit stimulated a debate on the nature and social value of science that was remarkable in a society so recently awakened to the scientific role in the process of modernization Einstein's universal appeal created the unlikely occasion for a fascination with science that cut across social classes and previously established domains of discourse The political Right which in other countries opposed relativity in the name of traditional Newtonian science backed the new theories with surprising enthusiasm Engineers a politically conservative group contributed much of the rank and file support for Einstein physicians who tended to the Left also eagerly embraced his ideas as did a host of mutually antagonistic political groups including anarcho syndicalists and bourgeois Catalan nationalists Professor Glick's analysis of this multidimensional scientific forum provides an unusual amount of information on science in Spain and an opportunity to contrast the Spaniards reception of Einstein's work and that of other nations during this historical period Originally published in 1988 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Feeling Strangely in Mid-Century Spanish and Latin American Women's Fiction** Tess C. Rankin, 2023-12-15 An Open Access edition of this book is available on the Liverpool University Press website and the OAPEN library as part of the Opening the Future project with COPIM The early twentieth century was awash in revolutionary scientific discourse and its uptake in the public imaginary through popular scientific writings touched every area of human experience from politics and governance to social mores and culture Feeling Strangely argues that these shifting scientific understandings and their integration into Hispanic and Lusophone society reshaped the experience of gender The book analyzes gender as a felt experience and explores how that experience is shaped by popular scientific discourse by examining the strange femininity of young protagonists in four novels written by women in Spanish and Portuguese Rosa Chacel's *Memorias de Leticia Valle* published in Argentina in 1945 Norah Lange's *Personas en la sala* Argentina 1950 Carmen Laforet's *Nada* Spain 1945 and Clarice Lispector's *Perto do cora o selvagem* Brazil 1943 It pairs each novel with a broad scientific theme selected from those that captured the contemporary popular imagination to argue that the young female protagonists in these novels all put forth visions of young womanhood as an experience of strangeness Building on Carmen Mart n Gait e's term *chicas raras* Rankin proposes this strangeness as constitutive of a gendered experience inextricable from affective and material engagements with the world

**Science, Religion and Nationalism** Jaume Navarro, Kostas Tampakis, 2024-01-16 Science and Religion have been two major elements in the building of modern nation states While contemporary historiography of science has

studied the interactions between nation building and the construction of modern scientific and technological institutions science and religion is still largely based on a supposed universal historiography in which global notions of science and of religion are seldom challenged This book explores the interface between science religion and nationalism at a local level paying attention to the roles religious institutions specific confessional traditions or an undefined notion of religion played in the construction of modern science in national contexts the use of anti clerical rhetoric as scapegoat for a perceived scientific and technological backwardness the part of religious tropes in the emergence of a sense of belonging in new states the creation of invented traditions that included religious and scientific myths so as to promote new identities the struggles among different confessional traditions in their claims to pre eminence within a specific nation state etc Moreover the chapters in this book illuminate the processes by which religious myths and institutions were largely substituted by stories of progress in science and technology which often contributed to nationalistic ideologies

**The Einstein Dossiers** Siegfried Grundmann, 2006-02-08 In 1919 the Prussian Ministry of Science Arts and Culture opened a dossier on Einstein s Theory of Relativity It was rediscovered by the author in 1961 and is used in conjunction with numerous other subsequently identified Einstein files as the basis of this fascinating book In particular the author carefully scrutinizes Einstein s FBI file from 1950 55 against mostly unpublished material from European including Soviet sources and presents hitherto unknown documentation on Einstein s alleged contacts with the German Communist Party and the Comintern Siegfried Grundmann s thorough study of Einstein s participation on a committee of the League of Nations based on archival research in Geneva is also new This book outlines Einstein s image in politics and German science policy It covers the period from his appointment as a researcher in Berlin to his fight abroad against the boycott of German science after World War I and his struggle at home against attacks on Jewish physics of which he was made a prime target An important gap in the literature on Einstein is thus filled contributing much new material toward a better understanding of Einstein s so rigorous break with Germany

China and Albert Einstein Danian HU, Danian Hu, 2009-06-30 China and Albert

Einstein is the first extensive study in English or Chinese of China's reception of the celebrated physicist and his theory of relativity. Tracing the influence of Jesuit missionaries in the seventeenth century and Western missionaries and educators in the nineteenth and twentieth centuries as they introduced key concepts of Western physical science and paved the way for Einstein's radical new ideas, Danian Hu shows us that Chinese receptivity was fostered by the trickle of Chinese students sent abroad for study beginning in the mid nineteenth century and by the openness of the May Fourth Movement 1916-1923. In a series of biographical studies of Chinese physicists, Hu describes the Chinese assimilation of relativity and explains how Chinese physicists offered arguments and theories of their own. Hu's account concludes with the troubling story of the fate of foreign ideas such as Einstein's in the Chinese Cultural Revolution 1966-1976 when the theory of relativity was denigrated along with Einstein's ideas on democracy and world peace. China and Albert Einstein is an important contribution to Einstein studies and a landmark work in the history of Chinese science.

**Einstein on the Road** Josef Eisinger, 2011-09-27

At the height of his fame, Albert Einstein traveled throughout the world from Japan to South America and many places in between. During these voyages between 1922 and 1933, he was in the habit of keeping travel diaries in which he recorded his impressions of people and events as well as his musings on everything from music and politics to quantum mechanics and psychoanalysis. These fascinating records are now here published in their entirety, painting an engaging personal portrait of Einstein the man. The author has created a vivid and entertaining narrative that brings Einstein's voice to the fore. During Einstein's travels far and wide, he meets with royalty, presidents, movie stars, and artists: Franklin and Eleanor Roosevelt, Winston Churchill, Charlie Chaplin, Fritz Kreisler, and Sinclair Lewis, as well as the most eminent scientists of the time, including Niels Bohr, Max Planck, Erwin Schrödinger, and Edwin Hubble. In his travel entries, we read his candid impressions of the Far East during a long sea voyage to Japan 1922, where Einstein is welcomed with enormous enthusiasm and steals the show at an imperial reception. He and Elsa visit and explore many Japanese cities as well as Singapore, Sri Lanka, Hong Kong, Shanghai, Barcelona, Madrid, and Jerusalem, where Einstein cogitates on Zionism and sees it in action. In 1931, the couple spends eight weeks in Pasadena, where Einstein enjoys fruitful interactions with scientists at Caltech and the Mount Wilson observatory. This portion of the diaries contains illuminating observations about American science and the Hollywood celebrities he encounters. He returns to Caltech two more times and enjoys two extended sojourns in another academic sanctuary, Oxford University. Back at home in Berlin, his diary shows his deep involvement with the academic, social, and cultural life of the German capital and with the politics of the Weimar Republic. He discusses books, dinner parties, plays, concerts, and sailing, but his greatest passion apart from physics is music; he is never happier than when playing chamber music, preferably Mozart, and he does so at every opportunity. A lifelong pacifist, he watches the rise of the Nazis with anxiety, and when Hitler gains control in 1933, he renounces pacifism and searches for a place of refuge. He finds it in Princeton, New Jersey, where he joins the newly created Institute for Advanced Study and becomes an American, never more to roam. Filled

with memorable vignettes this singular book provides a window into the thoughts and opinions of the twentieth century's most celebrated scientist and allows us to share in his exhilarating experiences

**Barcelona: An Urban History of Science and Modernity, 1888-1929** Oliver Hochadel, Agustí Nieto-Galan, 2016-04-14 The four decades between the two Universal Exhibitions of 1888 and 1929 were formative in the creation of modern Barcelona. Architecture and art blossomed in the work of Antoni Gaudí and many others. At the same time, social unrest tore the city apart. Topics such as art nouveau and anarchism have attracted the attention of numerous historians. Yet the crucial role of science, technology, and medicine in the cultural makeup of the city has been largely ignored. The ten articles of this book recover the richness and complexity of the scientific culture of end of the century Barcelona. The authors explore a broad range of topics: zoological gardens, natural history museums, amusement parks, new medical specialties, the scientific practices of anarchists and spiritists, the medical geography of the urban underworld, early mass media, domestic electricity, and astronomical observatories. They pay attention to the agenda of the bourgeois elites but also to hitherto neglected actors: users of electric technologies and radio amateurs, patients in clinics and dispensaries, collectors and visitors of museums, working class audiences of public talks, and female mediums. Science, technology, and medicine served to exert social control but also to voice social critique. *Barcelona: An urban history of science and modernity 1888-1929* shows that the city around 1900 was both a creator and facilitator of knowledge but also a space substantially transformed by the appropriation of this knowledge by its unruly citizens

*Impurity of Blood* Joshua Goode, 2009-12 *Impurity of Blood* analyzes the proposition of Spanish racial thought in the late 19th and early 20th centuries that racial strength came from a fusion of different groups rather than from a kind of racial purity. By providing a history of ethnic thought in Spain in the medieval and early modern era and by studying the formation of racial thought in Spain's nascent human sciences and its political and cultural manifestations leading into the Franco regime, it provides a new view of racial thought in Europe and its connections to the larger twentieth-century formation of racial thought in the West.

**Biographies in the History of Physics** Christian Forstner, Mark Walker, 2020-07-22 This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects, institutions, and concepts. What is a biography? Can biographies also be written for non-human subjects like scientific instruments, institutions, or concepts? The respective chapters of this book discuss these controversial questions using examples from the history of physics. By approaching biography as metaphor, it transcends the boundaries between various perspectives on the history of physics and enriches our grasp of the past.
