Enough Genetic Engineering And The End Of Human Nature:

Enough Bill McKibben, 2003-06 Passionate succinct chilling closely argued sometimes hilarious touchingly well intentioned and essential Margaret Atwood The New York Review of Books Nearly fifteen years ago in The End of Nature Bill McKibben demonstrated that humanity had begun to irrevocably alter and endanger our environment on a global scale Now he turns his eye to an array of technologies that could change our relationship not with the rest of nature but with ourselves He explores the frontiers of genetic engineering robotics and nanotechnology all of which we are approaching with astonishing speed and shows that each threatens to take us past a point of no return We now stand in Michael Pollan's words on a moral and existential threshold poised between the human past and a post human future McKibben offers a celebration of what it means to be human and a warning that we risk the loss of all meaning if we step across the threshold Instantly acclaimed for its passion and insight this wise and eloquent book argues that we cannot forever grow in reach and power that we must at last learn how to say Enough

Enough Bill McKibben, 2003-04-02 They are joined by other engineers working in fields like advanced robotics and nanotechnology who foresee a not very distant day when people merge with machines to create a posthuman world *First Do No Harm* Sheila A. M. McLean, 2016-04-15 This collection brings together essays from leading figures in the field of medical law and ethics which address the key issues currently challenging scholars in the field It has also been compiled as a lasting testimony to the work of one of the most eminent scholars in the area Professor Ken Mason The collection marks the academic crowning of a career which has laid one of the foundation stones of an entire discipline The wide ranging contents and the standing of the contributors mean that the volume will be an invaluable resource for anyone studying or working in medical law or medical ethics

Mythologies of Transhumanism Michael Hauskeller, 2016-11-09 This book examines the dependence of transhumanist arguments on the credibility of the narratives of meaning in which they are embedded By taking the key ideas from transhumanist philosophy the desirability of human self design and immortality the elimination of all suffering and the expansion of human autonomy Michael Hauskeller explores these narratives and the understanding of human nature that informs them Particular attention is paid to the theory of transhumanism as a form of utopia stories of human nature the increasing integration of the radical human enhancement project into the cultural mainstream and the drive to upgrade from flesh to machine

Global Governance and the Quest for Justice - Volume IV Roger Brownsword, 2004-12-31 This book one in the four volume set Global Governance and the Quest for Justice focuses on human rights in the context of globalisation together with the principle of respect for human rights and human dignity viewed as one of the foundational commitments of a legitimate scheme of global governance The first part of the book deals with the ways in which globalisation impacts on established commitments to respect human rights When human rights are set against or alongside potentially competing priorities such as security or economy how well do they fare Does it make any difference whether human rights commitments are expressed in dedicated free standing

instruments or incorporated as side constraints or collaterally in larger multi functional instruments In this light does it make sense to view a trade centred community such as the EU as a prospective regional model for human rights The second part of the book debates the coherence of a global order committed to respect for human rights and human dignity as one of its founding principles If globalisation aspires to export and spread respect for human rights the thrust of the papers in this volume is that it could do better that legitimate global governance demands that it does a great deal better and that lawyers face a considerable challenge in developing a coherent jurisprudence of fundamental values as the basis for a just global order *Transformation* Eolene M. Boyd-MacMillan,2006 **When IVF Fails** K. Throsby,2004-08-19 In spite of the fact

that almost eighty percent of all IVF cycles are unsuccessful the dominant representations of the technology are of its success Based on extensive interviews with women and couples who have undergone IVF unsuccessfully and who have since stopped treatment and taking an overtly feminist approach the book explores the ways in which IVF failure is experienced and accounted for The book argues that IVF failure and the end of treatment have to be carefully managed over time in order to construct the self as normal in the profoundly gendered context of reproductive normativity Treatment failure is identified in the book not only as a central but largely excluded aspect of the experience of IVF but also of a proliferating range of new more controversial reproductive and genetic technologies **Non-Representational Theory** Nigel Thrift,2008-03-25

Written by a pioneer of non representational theories this astonishing book promises to question the whole direction of social sciences methodology and makes essential reading for social sciences and humanities researchers and postgraduates

Here be Dragons Olle Häggström,2016 There is a widely held conception that progress in science and technology is our salvation and the more of it the better This however is an oversimplified and even dangerous attitude While the future will certainly offer huge changes due to such progress it is far from certain that all of these changes will be for the better The unprecedented rate of technological development that the 20th century witnessed has made our lives today vastly different from those in 1900 No slowdown is in sight and the 21st century will most likely see even more revolutionary changes than the 20th due to advances in science technology and medicine Particular areas where extraordinary and perhaps disruptive advances can be expected include biotechnology nanotechnology and machine intelligence We may also look forward various ways to enhance human cognitive and other abilities using e g pharmaceuticals genetic engineering or machine brain interfaces perhaps to the extent of changing human nature beyond what we currently think of as human and into a posthuman era The potential benefits of all these technologies are enormous but so are the risks including the possibility of human extinction This book is a passionate plea for doing our best to map the territories ahead of us and for acting with foresight so as to maximize our chances of reaping the benefits of the new technologies while avoiding the dangers

Reading Veganism Emelia Quinn,2021-09-02 Reading Veganism The Monstrous Vegan 1818 to Present focuses on the iteration of the trope the monstrous vegan across two hundred years of Anglophone literature Explicating through such

monsters veganism's relation to utopian longing and challenge to the conceptual category of the human the book explores ways in which ethical identities can be written represented and transmitted Reading Veganism proposes that we can recognise and identify the monstrous vegan in relation to four key traits First monstrous vegans do not eat animals an abstinence that generates a seemingly inexplicable anxiety in those who encounter them Second they are hybrid assemblages of human and nonhuman animal parts destabilising existing taxonomical classifications Third monstrous vegans are sired outside of heterosexual reproduction the product of male acts of creation And finally monstrous vegans are intimately connected to acts of writing and literary creation The principle contention of the book is that understandings of veganism as identity and practice are limited without a consideration of multiplicity provisionality failure and insufficiency within vegan definition and lived practice Veganism's association with positivity in its drive for health and purity is countered by a necessary and productive negativity generated by a recognition of the horrors of the modern world Vegan monsters rehearse the key paradoxes involved in the writing of vegan identity

Ecologies in Southeast Asian Literatures: Histories, Myths and Societies Chi P. Pham, Chitra Sankaran, Gurpreet Kaur, 2019-09-09 Ecocriticism in relation to the Southeast Asian region is relatively new So far John Charles Ryan's Ecocriticism in Southeast Asia is the first book of its kind to focus on the region and its literature to give an ecocritical analysis that volume compiles analyses of the eco literatures from most of the Southeast Asian region providing a broad insight into the ecological concerns of the region as depicted in its literatures and other cultural texts This edited volume furthers the study of Southeast Asian ecocriticism focusing specifically on prominent myths and histories and the myriad ways in which they connect to the social fabric of the region Our book is an original contribution to the expanding field of ecocriticism as it highlights the mytho historical basis of many of the region's literatures and their relationship to the environment The varied articles in this volume together explore the idea of nature and its relationship with humans The always problematic questions that surround such explorations such as why do we regard nature as external or how is humankind a continuum with nature emerge throughout the volume either overtly or implicitly As Pepper 1993 points out what Karl Marx referenced as first or external nature gave rise to humankind But humanity worked on this first nature to produce a second nature the material creations of society plus its institutions ideas and values Pepper 108 Thus our volume constantly negotiates this field of ideas and belief systems in diverse ways and in various cultures attempting to relate them to the current ecological predicaments of ASEAN It will likely prove an invaluable resource for scholars and students of ecocriticism and more broadly of Southeast Asian cultures and literatures

Embodiment and the Meaning of Life Jeff Noonan, 2018-03-21 The long tradition of pessimism in philosophy and poetry notoriously laments suffering caused by vulnerabilities of the human body The most familiar and contemporary version is antinatalism the view that it is wrong to bring sentient life into existence because birth inevitably produces suffering Technotopianism which stems from a similarly negative view of embodied limitations claims that we should escape sickness

and death through radical human enhancement technologies In *Embodiment and the Meaning of Life* Jeff Noonan presents pessimism and technotopianism as two sides of the same coin as both begin from the premise that the limitations of embodied life are inherently negative He argues that rather than rendering life pointless the tragic failures that mark life are fundamental to the good of human existence The necessary limitations of embodied being are challenges for each person to live well not only for their own sake but for the sake of the future of the human project Meaning is not a given Noonan suggests but rather the product of labour upon ourselves others and the world Meaningful labour is threatened equally by unjust social systems and runaway technological development that aims to replace human action rather than liberate it Calling on us to draw conceptual connections between finitude embodiment and the meaning of life this book shows that seeking the common good is our most viable and materially realistic source of optimism about the future

Nanoethics Fritz Allhoff, Patrick Lin, James H. Moor, John Weckert, 2007-08-10 Nanotechnology will eventually impact every area of our world Nanoethics seeks to examine the potential risks and rewards of applications of nanotechnology This up to date anthology gives the reader an introduction to and basic foundation in nanotechnology and nanoethics and then delves into near mid and far term issues Comprehensive and authoritative it Goes beyond the usual environmental health and safety EHS concerns to explore such topics as privacy nanomedicine human enhancement global regulation military humanitarianism education artificial intelligence space exploration life extension and more Features contributions from forty preeminent experts from academia and industry worldwide reflecting diverse perspectives Includes seminal works that influence nanoethics today Encourages an informed proactive approach to nanoethics and advocates addressing new and emerging controversies before they impede progress or impact our welfare This resource is designed to promote further investigations and a broad and balanced dialogue in nanoethics dealing with critical issues that will affect the industry as well as society While this will be a definitive reference for students scientists in academia and industry policymakers and regulators it s also a valuable resource for anyone who wants to understand the challenges principles and potential of nanotechnology

Humanity Enhanced Russell Blackford, 2014 An argument that modern liberal democracies should tolerate human enhancement technologies answering key objections by critics of these practices Emerging biotechnologies that manipulate human genetic material have drawn a chorus of objections from politicians pundits and scholars In *Humanity Enhanced* Russell Blackford eschews the heated rhetoric that surrounds genetic enhancement technologies to examine them in the context of liberal thought discussing the public policy issues they raise from legal and political perspectives Some see the possibility of genetic choice as challenging the values of liberal democracy Blackford argues that the challenge is not as commonly supposed the urgent need for a strict regulatory action Rather the challenge is that fear of these technologies has created an atmosphere in which liberal tolerance itself is threatened Focusing on reproductive cloning pre implantation genetic diagnosis of embryos and genetic engineering Blackford takes on objections to enhancement technologies raised by Jürgen Habermas and others based

on such concerns as individual autonomy and distributive justice He argues that some enhancements would be genuinely beneficial and that it would be justified in some circumstances even to exert pressure on parents to undertake genetic modification of embryos Blackford argues against draconian suppression of human enhancement although he acknowledges that some specific and limited regulation may be required in the future More generally he argues liberal democracies would demonstrate liberal values by tolerating and accepting the emerging technologies of genetic choice

EU Regulation of GMOs Maria Lee,2009-01-01 Lee s book is a valuable addition to the literature for those wishing to broaden their understanding of the range of legal disciplines involved in GMO regulation Tracey Epps European Review of Agricultural Economics Maria Lee s work is a successful attempt to illustrate the big legal issues behind the regulation of genetically modified organisms GMOs This study which is thorough and well documented is particularly welcomed in view of the need for a dialogue between different legal specialisms for which GMOs are a relevant area of research The book provides a very interesting and insightful examination of the legal problems raised by GMOs I would warmly recommend its reading to academics and practitioners who are interested in European risk regulation law environmental law biotechnology and trade law Sara Poli European Law Review Genetically modified organisms GMOs are an extraordinary innovation They raise great expectations of economic prosperity and improved capacity to address pressing problems of poverty and environmental degradation whilst simultaneously raising great concerns about the type of social and physical world they promise Finding space in regulation to consider the full range of issues provoked by GMOs is a huge challenge This book explores the EU s elaborate regulatory framework for GMOs which extends far beyond the process of their authorisation or not for the EU market embracing disparate legal disciplines including intellectual property consumer protection and civil liability The regulation of GMOs also highlights questions of EU legitimacy in a context of multi level governance both internally towards national and local government and externally in a world where technologies and their regulation have global impacts This book will be of interest to academics and students in both law and social sciences as well as practising lawyers and policy makers It addresses questions that are significant for those involved in environmental or food issues as well as specialists in GMOs

The Cambridge Companion to Margaret Atwood Coral Ann Howells,2021-04 A fully revised critical overview of Atwood s career emphasising her recent dystopias and the televised adaptation of *The Handmaid s Tale*

Hallowed Secularism B. Ledewitz,2009-03-02 Bruce Ledewitz proposes a Reformation in secular thinking He shows that in opposition to today s aggressive Atheism religious sources are necessary if secularism is to promote fulfilling human relationships and peaceful international relations Amid signs that secularism is growing in unhealthy ways Ledewitz proposes a new secular way to live

The Triple Helix: The Soul of Bioethics L. Bellantoni,2011-10-03 Lisa Bellantoni argues that contemporary bioethics divides into two logically incommensurable positions a cult of rights which identifies the worth of human life with our autonomy and a cult of life which identifies human worth with the possession of a soul and thereby of human dignity

The Politics of Protection Jef Huysmans, Andrew Dobson, Raia Prokhovnik, 2006-05-17 This new book shows how from the end of the Cold War the security agenda has been transformed and redefined academically and politically It focuses on the theme of protection It moves away from the dominant question of whom or what is threatening to the crucial questions of who is to be protected and in the case of conflicting claims who has the capacity to define whose needs prevail It also poses the question of political agency in relation to some of the most significant questions raised in relation to the governance of insecurity and protection in the contemporary world The authors identify and explore issues that challenge or raise a number of questions about the traditional notion that states are to protect their citizens through retaining a monopoly over the legitimate use of violence

Making Sense of Nature Noel Castree, 2013-08-15 We listen to a cacophony of voices instructing us how to think and feel about nature including our own bodies The news media wildlife documentaries science magazines and environmental NGOs are among those clamouring for our attention But are we empowered by all this knowledge or is our dependence on various communities allowing our thoughts sentiments and activities to be unduly governed by others Making Sense of Nature shows that what we call nature is made sense of for us in ways that make it central to social order social change and social dissent By utilising insights and extended examples from anthropology cultural studies human geography philosophy politics sociology science studies this interdisciplinary text asks whether we can better make sense of nature for ourselves and thus participate more meaningfully in momentous decisions about the future of life human and non human on the planet This book shows how nature can be made sense of without presuming its naturalness The challenge is not so much to rid ourselves of the idea of nature and its collateral concepts such as genes but instead we need to be more alert to how why and with what effects ideas about nature get fashioned and deployed in specific situations Among other things the book deals with science and scientists the mass media and journalists ecotourism literature and cinema environmentalists advertising and big business This innovative text contains numerous case studies and examples from daily life to put theory and subject matter into context as well as study tasks a glossary and suggested further reading The case studies cover a range of topics range from forestry in Canada and Guinea to bestiality in Washington State to how human genetics is reported in Western newspapers to participatory science experiments in the UK Making Sense of Nature will empower readers from a wide range of fields across the social sciences humanities and physical sciences
