Fascia: The Tensional Network of the Human Body Robert Schleip, Peter Huijing, Thomas W. Findley, 2013-02-26 This book is the product of an important collaboration between clinicians of the manual therapies and scientists in several disciplines that grew out of the three recent International Fascia Research Congresses Boston Amsterdam and Vancouver The book editors Thomas Findley MD PhD Robert Schleip PhD Peter Huijing PhD and Leon Chaitow DO were major organizers of these congresses and used their extensive experience to select chapters and contributors for this book This volume therefore brings together contributors from diverse backgrounds who share the desire to bridge the gap between theory and practice in our current knowledge of the fascia and goes beyond the 2007 2009 and 2012 congresses to define the state of the art from both the clinical and scientific perspective Prepared by over 100 specialists and researchers from throughout the world Fascia The Tensional Network of the Human Body will be ideal for all professionals who have an interest in fascia and human movement physiotherapists osteopathic physicians osteopaths chiropractors structural integration practitioners manual therapists massage therapists acupuncturists yoga or Pilates instructors exercise scientists and personal trainers as well as physicians involved with musculoskeletal medicine pain management and rehabilitation and basic scientists working in the field Reflects the efforts of almost 100 scientists and clinicians from throughout the world Offers comprehensive coverage ranging from anatomy and physiology clinical conditions and associated therapies to recently developed research techniques Explores the role of fascia as a bodywide communication system Presents the latest information available on myofascial force transmission which helps establish a scientific basis for given clinical experiences Explores the importance of fascia as a sensory organ for example its important proprioceptive and nociceptive functions which have implications for the generation of low back pain Describes new imaging methods which confirm the connectivity of organs and tissues Designed to organize relevant information for professionals involved in the therapeutic manipulation of the body's connective tissue matrix fascia as well as for scientists involved in basic science research Reflects the increasing need for information about the properties of fascia particularly for osteopaths massage therapists physiotherapists and other complementary health care professionals Offers new insights on the fascial related foundations of Traditional Chinese Medicine Meridians and the fascial effects of acupuncture

Gastrointestinal Disorders William E. Whitehead, Marvin Meier Schuster, 1985 Principles of Neural Science, Fifth Edition Eric R. Kandel, 2013 Principles of Neural Science 5e describes our current understanding of how the nerves brain and mind function From molecules and cells to anatomic structures and systems to senses and cognitive functions this comprehensive reference covers every aspect of neuroscience

Interoception, Contemplative Practice, and Health Norman Farb, Catherine Kerr, Wolf E. Mehling, Olga Pollatos, 2017-02-07 There is an emergent movement of scientists and scholars working on somatic awareness interoception and embodiment This work cuts across studies of neurophysiology somatic anthropology contemplative practice and mind

body medicine Key questions include How is body awareness cultivated What role does interoception play for emotion and cognition in healthy adults and children as well as in different psychopathologies What are the neurophysiological effects of this cultivation in practices such as Yoga mindfulness meditation Tai Chi and other embodied contemplative practices What categories from other traditions might be useful as we explore embodiment Does the cultivation of body awareness within contemplative practice offer a tool for coping with suffering from conditions such as pain addiction and dysregulated emotion This emergent field of research into somatic awareness and associated interoceptive processes however faces many obstacles The principle obstacle lies in our 400 year Cartesian tradition that views sensory perception as epiphenomenal to cognition The segregation of perception and cognition has enabled a broad program of cognitive science research but may have also prevented researchers from developing paradigms for understanding how interoceptive awareness of sensations from inside the body influences cognition The cognitive representation of interoceptive signals may play an active role in facilitating therapeutic transformation e g by altering context in which cognitive appraisals of well being occur This topic has ramifications into disparate research fields What is the role of interoceptive awareness in conscious presence How do we distinguish between adaptive and maladaptive somatic awareness How do we best measure somatic awareness What are the consequences of dysregulated somatic interoceptive awareness on cognition emotion and behavior The complexity of these questions calls for the creative integration of perspectives and findings from related but often disparate research areas including clinical research neuroscience cognitive psychology anthropology religious contemplative studies and philosophy

Visceral Perception Gyorgy Ádám, 2013-03-09 Author Gyorgy Adam maintains there is a type of sensory system active within the internal organs that appears to be in some measure independent of the traditional senses Various terms have been used to describe this system including viscerosensory perception internal perception or internal cognition this system operates largely outside of consciousness Adam employs the extensive data he has gathered over many years to demonstrate how hidden internal signals originating in the alimentary tract the cardiovascular system and the kidneys may influence emotional states Visceral Perception is the only comprehensive treatment of this elusive subject *Interoception* Jennifer Murphy, Rebecca Brewer, 2024-10-14 This book provides a comprehensive overview and critical evaluation of the emerging and exciting topic of interoception the perception of the body's internal state Interest in the topic has been driven by the observation that interoception appears to affect fundamental psychological processes and numerous physical and mental health conditions In this book the major authorities in the field present a discussion of the history of interoception the neural basis of interoception and the measurement and models of interoception conceptualization This is followed by a consideration of the many domains that interoception appears to impact including social and cognitive abilities and mental and physical health conditions and differences across demographic groups *Interoception A Comprehensive Guide* also explores real world applications including training for interoception the modulation of interoception and the impact of such interventions and future research directions **Fascia**

Carames Tejedor, M. Teresa Anguera, Verónica Morales-Sánchez, 2025-06-26 This Research Topic is the second volume of the

Research Topic New Methodological Intervention and Neuroscientific Perspectives in Sports Psychology Please see the first

volume here Within the discipline of sport psychology considerable work involves the development implementation and

evaluation of interventions to improve the world of sport The importance of theory as a basis for such intervention efforts has

been strongly emphasized In recent years research has shown that there are three factors on which to base future

developments methodological innovations e g Mixed Methods new intervention approaches e g Empowering Disempowering

Climates and advances in neuroscience e g inhibitory circuits Regarding methodological innovations the importance of mixed

methods in this field is highlighted by their profound significance Indeed procedural innovations with direct and indirect

observational data has allowed the observational methodology to be considered as a mixed method in itself This approach has

been implemented in recent years in many publications relating to various sports Other methodological advances involve the

evolution of structural equation analysis For example the increasing use of invariance analysis mediation analysis PLS

software which allows non normal samples multilevel analysis generalizability analysis and the graphical evolution of data
