 delivered at Cornell University in the fall of 1949 and since revised this is the standard non technical coverage of Egyptian
 and Babylonian mathematics and astronomy and their transmission to the Hellenistic world Entirely modern in its data and
 conclusions it reveals the surprising sophistication of certain areas of early science particularly Babylonian mathematics
 After a discussion of the number systems used in the ancient Near East contrasting the Egyptian method of additive
 computations with unit fractions and Babylonian place values Dr Neugebauer covers Babylonian tables for numerical
 computation approximations of the square root of 2 with implications that the Pythagorean Theorem was known more than a
 thousand years before Pythagoras Pythagorean numbers quadratic equations with two unknowns special cases of logarithms
 and various other algebraic and geometric cases Babylonian strength in algebraic and numerical work reveals a level of
 mathematical development in many aspects comparable to the mathematics of the early Renaissance in Europe This is in
 contrast to the relatively primitive Egyptian mathematics In the realm of astronomy too Dr Neugebauer describes an
 unexpected sophistication which is interpreted less as the result of millennia of observations as used to be the interpretation
 than as a competent mathematical apparatus The transmission of this early science and its further development in Hellenistic
 times is also described An Appendix discusses certain aspects of Greek astronomy and the indebtedness of the Copernican
 system to Ptolemaic and Islamic methods Dr Neugebauer has long enjoyed an international reputation as one of the foremost
 workers in the area of premodern science Many of his discoveries have revolutionized earlier understandings In this volume
 he presents a non technical survey with much material unique on this level which can be read with great profit by all
 interested in the history of science or history of culture 14 plates 52 figures **Sundials** Robert Newton Mayall, Margaret
 Walton Mayall, 2000-01-01 Clear instructions for constructing a sundial on almost any surface and in virtually any position
 with information on materials Standard Time dials laying out hour lines and more 150 illustrations
