The ^AOxford Companion to American Food and Drink Andrew F. Smith, 2007-05-01 Building on the highly praised and deliciously browseable two volume compendium the Oxford Encyclopedia of Food and Drink in America, this new work serves up everything you could ever want to know about American consumables and their impact on popular culture and the culinary world. Within its pages, for example, we learn that Lifesavers candy owes its success to the canny marketing idea of placing the original flavor mint next to cash registers at bars. Patrons who bought them to mask the smell of alcohol on their breath before heading home soon found they were just as tasty sober and the company began producing other flavors. Edited by Andrew Smith, a writer and lecturer on culinary history, the Companion serves up more than just trivia, however, including hundreds of entries on fast food, celebrity chefs, fish sandwiches, regional and ethnic cuisine, food science and historical food traditions.

David Hawksworth The organisms addressed include plants insects fungi bacteria and phages Bioprospecting has never been more relevant and is of renewed interest because of the extremely worrying rise in novel resistant pathogenic microorganisms The practices in pharmaceutical companies have failed to deliver novel antibiotics to control these infections We need to look for new sources of drugs from the environment on a massive scale as drug discovery is too important to fail Furthermore the field can add great value to ecosystems in terms of economics while providing additional reasons for maintaining associated services such as food provision benign climate effective nutrient cycling and cultural practices Bioprospecting provides another reason why climate change must be reduced in order to preserve relevant environments Previous bioprospecting projects should be re visited and established biodiversity centres have a major role Many different ecosystems exist which contain unique organisms with the potential to supply novel antibiotics enzymes food and cosmetics or they may simply have aesthetic value The book stresses the difficulties in obtaining successful products and yet describes why natural products should be investigated over combinatorial chemistry Personal experience of bioprospecting projects are given significance Issues such as how to share the benefits equitably with local communities are described and why pharmaceutical companies can be reluctant to be involved Legal issues are discussed Finally there has never been a better time for a new book on bioprospecting because of the need to preserve ecosystems and from the emergence of resistant pathogenic microorganisms
