Enveloping Algebras:

Enveloping Algebras Dixmier, 2009-02-10 Enveloping Algebras **Enveloping Algebras** Jacques Dixmier, 1996 This is an English edition of Dixmier's book which is the first systematic exposition of the algebraic approach to representations of Lie groups via representations of or modules over the corresponding universal enveloping algebras turned out to be so well written that even today it remains one of the main textbooks and reference books on the subject In 1992 Dixmier was awarded the Leroy P Steele prize for expository writing in mathematics The Committee's citation described this as one of Dixmier's extraordinary books Written with unique precision and elegance the book provides the reader with insight and understanding of this very important subject It can be an excellent textbook for a graduate course as well as a very useful source of references in the theory of universal enveloping algebras the area of mathematics that remains as important today as it was 20 years ago For the 1996 edition the author updated the status of open problems and added some relevant references

Lie Superalgebras and Enveloping Algebras Ian Malcolm Musson, 2012-04-04 Lie superalgebras are a natural generalization of Lie algebras having applications in geometry number theory gauge field theory and string theory This book develops the theory of Lie superalgebras their enveloping algebras and their representations The book begins with five chapters on the basic properties of Lie superalgebras including explicit constructions for all the classical simple Lie superalgebras Borel subalgebras which are more subtle in this setting are studied and described Contragredient Lie superalgebras are introduced allowing a unified approach to several results in particular to the existence of an invariant bilinear form on $\mathfrak{g}$ The enveloping algebra of a finite dimensional Lie superalgebra is studied as an extension of the enveloping algebra of the even part of the superalgebra By developing general methods for studying such extensions important information on the algebraic structure is obtained particularly with regard to primitive ideals Fundamental results such as the Poincaré Birkhoff Witt Theorem are established Representations of Lie superalgebras provide valuable tools for understanding the algebras themselves as well as being of primary interest in applications to other fields Two important classes of representations are the Verma modules and the finite dimensional representations The fundamental results here include the Jantzen filtration the Harish Chandra homomorphism the Sapovalov determinant supersymmetric polynomials and Schur Weyl duality Using these tools the center can be explicitly described in the general linear and orthosymplectic cases In an effort to make the presentation as self contained as possible some background material is included on Lie theory ring theory Hopf algebras and combinatorics

Integral Bases for Affine Lie Algebras and Their Universal Enveloping Algebras David Mitzman, 1985 A revised version of the author's PhD thesis written under the supervision of J Lepowsky at Rutgers University in 1983

Vertex Algebras and Integral Bases for the Enveloping Algebras of Affine Lie Algebras Shari A. Prevost, 1992 We present a new proof of the identities needed to exhibit an explicit bold Z basis for the universal enveloping algebra associated to an affine Lie algebra We then use the explicit bold Z bases to extend Borcherds

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, 2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry

Lie Algebras and Related Topics Daniel J. Britten, Frank W. Lemire, R. V. Moody, 1986 As the Proceedings of the 1984 Canadian Mathematical Society's Summer Seminar this book focuses on some advances in the theory of semisimple Lie algebras and some direct outgrowths of

that theory The following papers are of particular interest an important survey article by R Block and R Wilson on restricted simple Lie algebras a survey of universal enveloping algebras of semisimple Lie algebras by W Borho a course on Kac Moody Lie algebras by I G Macdonald with an extensive bibliography of this field by Georgia Benkart and a course on formal groups by M Hazewinkel Because of the expository surveys and courses the book will be especially useful to graduate students in Lie theory as well as to researchers in the field

Growth of Algebras and Gelfand-Kirillov Dimension G. R. Krause, T. H. Lenagan, 2000 During the two decades that preceded the publication of the first edition of this book the Gelfand Kirillov dimension had emerged as a very useful and powerful tool for investigating non commutative algebras At that time the basic ideas and results were scattered throughout various journal articles The first edition of this book provided a much needed reliable and coherent single source of information Since that time the book has become the standard reference source for researchers For this edition the authors incorporated the original text with only minor modifications Errors have been corrected items have been rephrased and more mathematical expressions have been displayed for the purpose of clarity The newly added Chapter 12 provides broad overviews of the new developments that have surfaced in the last few years with references to the literature for details The bibliography has been updated and accordingly almost double the size of the original one The faithful revision and contemporary design of this work offers time honored expertise with modern functionality A keenly appealing combination So whether for the classroom the well tended mathematical books collection or the research desk this book holds unprecedented relevance

Azumaya Algebras, Actions, and Modules Darrell Haile, 1992 This volume contains the proceedings of

a conference in honor of Goro Azumaya's seventieth birthday held at Indiana University of Bloomington in May 1990. Professor Azumaya, who has been on the faculty of Indiana University since 1968, has made many important contributions to modern abstract algebra. His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory. In addition to honoring Professor Azumaya's contributions, the conference was intended to stimulate interaction among three areas of his research interests: Azumaya algebras, group and Hopf algebra actions, and module theory. Aimed at researchers in algebra, this volume contains contributions by some of the leaders in these areas.
