as well as to its historical trends and current developments Balancing landmark essays with cutting edge scholarship bridging theory and practice and offering suggestions for further reading and new directions for research The Environment in Anthropology continues to provide the ideal introduction to a burgeoning field **Environmental Anthropology** Michael R. Dove, Carol Carpenter, 2008 Environmental Anthropology A Reader is a collection of historically significant readings dating from early in the twentieth century up to the present on the cross cultural study of relations between people and their environment Provides the historical perspective that is typically missing from recent work in environmental anthropology Includes an extensive intellectual history and commentary by the volume s editors Offers a unique perspective on current interest in cross cultural environmental relations Divided into five thematic sections 1 the nature culture divide 2 relationship between environment and social organization 3 methodological debates and innovations 4 politics and practice and 5 epistemological issues of environmental anthropology Organized into a series of paired papers which speak to each other designed to encourage readers to make connections that they might not customarily make Environmental Anthropology Patricia K. Townsend, 2017-11-10 Environmental anthropologists organize the realities of interdependent lands plants animals and human beings advocate for the neediest among them and provide guidance for conservation efforts But can anthropologists studies of small scale systems contribute to policies that address profoundly interconnected global problems Townsend explores this question in her concise introduction to environmental anthropology While maintaining the structure and clarity of previous editions the third edition has been thoroughly revised to include new research Newly added are a chapter on the environmental impact of war and recommended readings and films Townsend begins with a historical overview of the field illustrating how earlier ideas and approaches help to understand how today s populations adapt to their physical and biological environments She then transitions to a closer look at global environmental issues including such topics as rapid expansion of the world economic system and inequality loss of biodiversity and its implications for human health and injustices of climate change resource extraction and toxic waste disposal The final chapters caution that meaningful change requires social movements and policy changes in addition to individual actions Routledge Handbook of Environmental Anthropology Helen Kopnina, Eleanor Shoreman-Ouimet, 2016-08-12 Environmental Anthropology studies historic and present human environment interactions This volume illustrates the ways in which today s environmental anthropologists are constructing new paradigms for understanding the multiplicity of players pressures and ecologies in every environment and the value of cultural knowledge of landscapes This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections As the contributions to this Handbook demonstrate the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways As a discipline concerned primarily with human environment interaction environmental anthropologists recognize that we are now working

within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world As we see in the breadth of topics presented in this volume these environmental challenges have inspired renewed foci on traditional topics such as food procurement ethnobiology and spiritual ecology and a broad new range of subjects such as resilience nonhuman rights architectural anthropology industrialism and education This volume enables scholars and students quick access to both established and trending environmental anthropological explorations into theory methodology and practice *The Environment in Anthropology (Second Edition)* Nora Haenn, Richard R. Environmental Anthropology Today Helen Kopnina, Eleanor Shoreman-Ouimet, 2011-08-05 This collection offers a wide ranging consideration of the field which illustrates how environmental anthropology can increase our understanding and help find solutions to environmental problems **Environmental Anthropology** Michael Bollig, Franz Krause, 2023-09-04 Wie interagieren Menschen mit ihren Umwelten Wie beeinflussen sie den Verlust und Erhalt der biologischen Vielfalt den Klimawandel die Umweltverschmutzung und den Umweltschutz Das Buch f hrt Studierende in die Forschung und Praxis der Umweltanthropologie ein stellt aktuelle Schl sselkonzepte Anwendungsbereiche und Debatten vor und beleuchtet zentrale sozial kologische Themen *Environmentalism and Cultural Theory* Kay Milton, 1996 First Published in 1996 Routledge is an imprint of Taylor Francis an informa company **Environmental Anthropology** Patricia K. Townsend, 2008-06-25 Environmental anthropologists organize the realities of interdependent lands plants animals and human beings advocate for the neediest among them and provide understandings that preserve what is needed for the survival of a diverse world Can the things that anthropologists have learned in their studies of small scale systems have any relevance for developing policies to address global problems Townsend explores this dilemma in her captivating concise exploration of environmental anthropology and its place among the disciplines subfields Maintaining the structure and clarity of the previous edition the second edition has been revised throughout to include new research expanded discussions of climate change and a chapter devoted to spiritual ecology In the historical overview of the field Townsend shows how ideas and approaches developed earlier are relevant to understanding how today's local populations adapt to their physical and biological environments She next presents a closer look at global environmental issues rapid expansion of the world economic system disease and poverty the loss of biodiversity and its implications for human health to demonstrate the effects of interactions between local and global communities As a capstone she gives thoughtful consideration to how as professionals and as individuals we can move toward personal engagement with environmental problems *Environmental Anthropology* Helen Kopnina, Eleanor Shoreman-Ouimet, 2013-07-18 This volume presents new theoretical approaches methodologies subject pools and topics in the field of environmental anthropology Environmental anthropologists are increasingly focusing on self reflection not just on themselves and their impacts on environmental research but also on the reflexive qualities of their subjects and the extent to which these individuals are questioning their own environmental behavior Here contributors confront the very notion of

natural resources in granting non human species their subjectivity and arguing for deeper understanding of nature and wilderness beyond the label of ecosystem services By engaging in interdisciplinary efforts these anthropologists present new ways for their colleagues subjects peers and communities to understand the causes of and alternatives to environmental destruction This book demonstrates that environmental anthropology has moved beyond the construction of rural small group theory entering into a mode of solution based methodologies and interdisciplinary theories for understanding human environmental interactions It is focused on post rural existence health and environmental risk assessment on the realm of alternative actions and emphasizes the necessary steps towards preventing environmental crisis **People and Nature**

Emilio F. Moran, 2009-02-04 This book provides a lively and thoughtful introduction to ecological anthropology by examining the evolving relations between human communities and nature Written by a noted anthropologist geographer

and environmental scientist Reviews the evolution of human interactions with the natural world drawing from anthropology and geography Explores those aspects of human ecological relations that seem to account for the greater connectedness of certain societies to their physical environment Offers a vision for improved relations between humans and nature Power in Conservation

Carol Carpenter, 2020-05-11 This book examines theories and ethnographies related to the anthropology of power in conservation Conservation thought and practice is power laden conservation thought is powerfully shaped by the history of ideas of nature and its relation to people and conservation interventions govern and affect peoples and ecologies This book argues that being able to think deeply particularly about power improves conservation policy making and practice Political ecology is by far the most well known and well published approach to thinking about power in conservation This book analyzes the relatively neglected but robust anthropology of conservation literature on politics and power outside political ecology especially literature rooted in Foucault It is intended to make four of Foucault's concepts of power accessible concepts that are most used in the anthropology of conservation the power of discourses discipline and governmentality subject formation and neoliberal governmentality The important ethnographic literature that these concepts have stimulated is also examined Together theory and ethnography underpin our emerging understanding of a new Anthropocene shaped world This book will be of great interest to students and scholars of conservation environmental anthropology and political ecology as well as conservation practitioners and policy makers Human Ecology as Human Behavior

John W. Bennett, 2017-07-05 Human interaction with the natural environment has a dual character By turning increasing quantities of natural substances into physical resources human beings might be said to have freed themselves from the constraints of low technology survival pressures However the process has generated a new dependence on nature in the form of complex socionatural systems as Bennett calls them in which human society and behavior are so interlocked with the management of the environment that small changes in the systems can lead to disaster Bennett's essays cover a wide range from the philosophy of environmentalism to the ecology of economic development from the human impact on semi arid

lands to the ecology of Japanese forest management This expanded paperback edition includes a new chapter on the role of anthropology in economic development Bennett s essays exhibit an underlying pessimism if human behavior toward the physical environment is the distinctive cause of environmental abuse then reform of current management practices offers only temporary relief that is conservationism like democracy must be continually reaffirmed Clearly presented and free of jargon Human Ecology as Human Behavior will be of interest to anthropologists economists and environmentalists

Environmentalism Kay Milton,1993 Located in a wide spectrum of current research and practice from analyses of green ideology and imagery enviromental law and policy and local enviromental activism in the West to ethnographic studies of relationships between humans and their enviroments in hunter gatherer societies Enviromentalism The View from Anthropology offers an original perspective on what is probably the best known issue of the late twentieth century It will be particularly useful to all social scientists interested in environmentalism and human ecology to environmental policy makers and to undergraduates lecturers and researchers in social anthropology development studies and sociology **New**

Directions in Anthropology and Environment Carole L. Crumley,2002-05-09 Carole L Crumley has brought together top scholars from across anthropology in a benchmark volume that displays the range of exciting new work on the complex relationship between humans and the environment Continually pursuing anthropology s persistent claim that both the physical and the mental world matter these environmental scholars proceed from the holistic assumption that the physical world and human societies are always inextricably linked As they incorporate diverse forms of knowledge their work reaches beyond anthropology to bridge the sciences social sciences and the humanities and to forge working relationships with non academic communities and professionals Theoretical issues such as the cultural dimensions of context knowledge and power are articulated alongside practical discussions of building partnerships research methods and ethics and strategies for implementing policy New Directions in Environment and Anthropology will be important for all scholars and non academics interested in the relation between our species and its biotic and built environments It is also designed for classroom use in and beyond anthropology and students will be greatly assisted by suggested reading lists for their further exploration of general concepts and specific research Learn more about the author at the University of North Carolina Anthropology Department web pages **Cultural Ecology** Robert McC. Netting,1986 Offering the essentials of variation in subsistence technology and environment This short versatile book clearly and concisely illustrates the central concepts and general principles of cultural ecology It introduces students to the topic of ecological anthropology by presenting illustrative ethnographic cases of hunter gatherer pastoralist and agricultural societies This treatment includes information on human environment intervention especially in the sections of East African pastoralism and peasant cultivation in Switzerland

Culture and Conservation Eleanor Shoreman-Ouimet,Helen Kopnina,2015-11-19 Today there is growing interest in conservation and anthropologists have an important role to play in helping conservation succeed for the sake of humanity

and for the sake of other species Equally important however is the fact that we as the species that causes extinctions have a moral responsibility to those whose evolutionary unfolding and very future we threaten This volume is an examination of the relationship between conservation and the social sciences particularly anthropology It calls for increased collaboration between anthropologists conservationists and environmental scientists and advocates for a shift towards an environmentally focused perspective that embraces not only cultural values and human rights but also the intrinsic value and rights to life of nonhuman species This book demonstrates that cultural and biological diversity are intimately interlinked and equally threatened by the industrialism that endangers the planet s life giving processes The consideration of ecological data as well as an expansion of ethics that embraces more than one species is essential to a well rounded understanding of the connections between human behavior and environmental wellbeing This book gives students and researchers in anthropology conservation environmental ethics and across the social sciences an invaluable insight into how innovative and intensive new interdisciplinary approaches questions ethics and subject pools can close the gap between culture and conservation

Amphibious Anthropologies Assistant Professor Alejandro Camargo,Assistant Professor Luisa Cortesi,Professor of Environmental Anthropology Franz Krause,Professor of Anthropology K Sivaramakrishnan,2025-04-29 **The Anthropology of Sustainability** Marc Brightman,Jerome Lewis,2017-08-02 This book compiles research from leading experts in the social behavioral and cultural dimensions of sustainability as well as local and global understandings of the concept and on lived practices around the world It contains studies focusing on ways of living acting and thinking which claim to favor the local and global ecological systems of which we are a part and on which we depend for survival The concept of sustainability as a product of concern about global environmental degradation rising social inequalities and dispossession is presented as a key concept The contributors explore the opportunities to engage with questions of sustainability and to redefine the concept of sustainability in anthropological terms
