West, 2006-02-23 We began this book with a simple goal to assemble a collection of readings for an undergraduate interdisciplinary course taught by one of us AR at Macalester College This course explored environmental problems and solutions in Latin America and the Caribbean using both natural science and social science methods After a literature search failed to produce an anthology of interdisciplinary readings appropriate for the course we set out to compile one We sought papers that dealt with the most salient environmental problems in the region that were written by experts and that were appropriate for undergraduate students Most importantly we sought papers that clearly demonstrate the contributions that experts from one discipline can make to analysis in another discipline We sought papers that for example show how biological species assessments can be used to inform the politics of biodiversity conservation We sought papers that show how economic analysis can be used to predict the likely effects of human behavior on ecosystems We sought papers that pay close attention to how institutions both national and international affect the outcome of environmental initiatives To find

essays that fit our needs we sent out a world wide call for papers chose the most promising submissions and subjected these submissions to peer review The twelve approved essays represent the work of researchers from Latin America and the Caribbean the United States Canada Europe and Australia All the authors have direct experience with Latin America and the Caribbean and the region s problems

The Philosophical Foundations of Environmental

Law Sean Coyle,Karen Morrow,2004-04-22 Legal regulation of the environment is often construed as a collection of legislated responses to the problems of modern living Treated as such environmental law refers not to a body of distinctive juristic ideas such as one might find in contract law or tort but to a body of black letter rules out of which a distinct jurisprudence might grow This book challenges the accepted view by arguing that environmental law must be seen not as a mere instrument of social policy but as a historical product of surprising antiquity and considerable sophistication Environmental law it is argued is underpinned by a series of tenets concerning the relationship of human beings to the natural world through the acquisition and use of property By tracing these ideas to their roots in the political philosophy of the seventeenth century and their reception into the early law of nuisance this book seeks to overturn the perception that environmental law s philosophical significance is confined to questions about the extent to which a state should pursue collective well being and public health through deliberate manipulation and restriction of private property rights Through a close re examination of both early and modern statutes and cases this book concludes that far from being intelligible in exclusively instrumental terms environmental law must be understood as the product of sustained reflection upon fundamental moral questions concerning the relationship between property rights and nature

Nature, Environment

and Society Philip Sutton,2017-03-14 How have sociologists responded to the emergence of environmentalism What has sociology to offer the study of environmental problems This uniquely comprehensive guide traces the origins and development of environmental movements and environmental issues providing a critical review of the most significant

debates in the new field of environmental sociology It covers environmental ideas environmental movements social constructionism critical realism ecocentric theory environmental identities risk society theory sustainable development Green consumerism ecological modernization and debates around modernity and post modernity Philip Sutton adopts a long term view which focuses on the relationship between ideas of nature and environment ecological identities and social change providing a framework for future research Bringing environmental issues into contact with sociological theories Nature Environment and Society provides an up to date introduction to this important new field It will be essential reading for all students of sociology environmental studies and anyone interested in understanding environmental problems Society and Economy in Modern Britain 1700-1850 Richard Brown,2002-11-01 For both contemporaries and later historians the Industrial Revolution is viewed as a turning point in modern British history There is no doubt that change occurred but what was the nature of that change and how did it affect rural and urban society Beginning with an examination of the nature of history and Britain in 1700 this volume focuses on the economic and social aspects of the Industrial Revolution Unlike many previous textbooks on the same period it emphasizes British history and deals with developments in Wales Scotland and Ireland in their own right It is the emphasis on the diversity not the uniformity of experience on continuities as well as change in this crucial period of development which makes this volume distinctive In his companion title Richard Brown completes his examination of the period and looks at the changes that took place in Britain's political system and in its religious affiliations Saving Nature Tarjei Rønnow,2011 Environmentalism has moved into the center of the most influential social movements in late modernity From preserving pre industrial landscapes advocating the intrinsic value of nature and protecting ecosystems against overexploitation it has developed into a worldview ethos and practice that is radically shifting the frontiers of politics economics and ethics Saving Nature approaches environmentalism as a belief system The book explores the impact of environmentalism on faith communities and vice versa and analyzes how environmental worldviews values attitudes and discourses affect religion By drawing on sources in the sociology of religion and environmental sociology it sheds light on the religious dimensions of environmentalism It locates the quick growth of environmentalism in the history of allegedly secular modernity and interprets environmentalism in the context of modernity's re sacralization Series Studies in Religion and the Environment Studien zur Religion und Umwelt Vol 4 **Media Culture & Environ. Co-P** Alison Anderson,2019-07-12 First Published in 1997 This book is intended for final year undergraduates and postgraduates in cultural and media studies as well as postgraduate and academic researchers Courses on culture and the media within sociology environmental studies human geography and politics
