and health threatening human environments Environment related diseases and injuries cause millions of preventable deaths each year In many squatter settlements children are 40 to 50 times more likely to die before the age of five than they would be in Europe or North America and most such deaths are environment related Many cities also cause serious environmental degradation to their surroundings and increasingly contribute to global warming This updated and much expanded edition of the classic Environmental Problems in Third World Cities describes environmental problems and their effect on human health local ecosystems and global cycles It points to the political causes that underpin many of these problems including ineffective unaccountable governments and aid agencies reluctance to work with the urban poor It also highlights innovative solutions such as High quality low cost homes and neighbourhoods developed by urban poor groups working with local non governmental organizations Local Agenda 21s developed by municipal governments in partnership with community organizations In their analysis the authors show that cities can meet sustainable development goals There are practical affordable solutions to their environmental problems but most of these depend on more competent and accountable city governments and on more support for low income households and their organizations The book also outlines the changes needed international aid agencies to support this PRAISE FOR THE FIRST EDITION It s rare to encounter a work as authoritative and accessible as this It is a mine of useful information from cities in every corner of the Third World which does not shy away from the immensity of the problems but says as much about the solutions to them as about the problems themselves Jonathon Porritt Well written and very accessible The Geographical Journal Of value to students teachers practitioners policy makers and aid agencies Third World Planning Review A valuable resource for understanding the underlying problems this book offers practical alternatives Cities International World in Transition: Ways Towards Global Environmental Solutions German Advisory Council on Global change (WBGU),2012-12-06 At the first Conference of the Parties of the Climate Convention in Berlin in Spring 1995 it became evident once again To counteract anthropogenic climate changes individuals as well as societies have to change their way of thinking and behavior This accounts for other areas of global environmental change as well Global trends like soil degradation loss of biological diversity water scarcity and population growth show little or no sign of improvement In fact in most areas a rapid deterioration has taken place In its latest Report the German Advisory Council on Global Change describes Ways Towards Global Environmental Solutions
