Environmental And Resource Policy For Consumer Durables:

Environmental and Resource Policy for Consumer Durables, 2012-08-29 **Environmental Health Perspectives**, 2004 Equity and Efficiency Considerations of Public Higher Education Salvatore Barbaro, 2005-12-16 It has become part of the conventional wisdom in the economics of education that subsidies to higher education have a regressive distributional effect Given that relatively more children from wealthier families enroll in higher education many economist assume that these subsidies to higher education have an unwanted distributional impact This volume presents new empirical evidence for the cross sectional point of view and provides an analytical framework for the longitudinal perspective The present volume also analyzes the equity and efficiency effects of widely discussed funding reforms and proposes a voluntary graduate tax

A Structural Framework for the Pricing of Corporate Securities Michael Genser, 2006-01-20 A treatment of structural credit risk models for simultaneous and consistent pricing of corporate securities This book takes us from the economic principles of firm value models to the empirical implementation through the development of an economic framework It provides exposition of corporate securities pricing for academics and practitioners **Real Options and Intellectual Property** Philipp N. Baecker, 2007-08-06 This book proposes an integrated approach to patent risk and capital budgeting in pharmaceutical research and development R and D developing an option based view OBV of imperfect patent protection which draws upon contingent claims analysis stochastic game theory as well as novel numerical methods The text re initiates a discussion about the contribution of quantitative frameworks to value based R and D management *The Knowledge Ahead Approach to Risk* Robin Pope, Johannes Leitner, Ulrike Leopold-Wildburger, 2006-11-23 This book is written for those seeking a decision theory appropriate for use in serious choices such as insurance It employs stages of knowledge ahead to track satisfactions and dissatisfactions From experimental and questionnaire data people take into account such stages of knowledge ahead satisfactions and dissatisfactions This means we must go beyond standard decision theories like expected utility or cumulative prospect theory *Strategic Closed-Loop Supply Chain Management* Baptiste Lebreton, 2006-11-22 Closed loops depict supply chains for which Original Equipment Manufacturer reintegrate their returned products into their own production network While the reverse logistics research has extensively addressed the technical aspects of product reintegration very few insights are available on whether OEMs should commit themselves to a closed loop The structure of the monograph is aligned to the decision making process of Original Equipment Manufacturers willing to investigate the potential of closed loops This decision making process is structured around fundamental questions managers are expected to answer prior to running a circular supply chain Does a closed loop fit with the corporate objectives Is it profitable to run a closed loop How should OEMs deal with free riders competition Which product technology location setup leads to a profit maximizing supply chain The planning framework is finally applied to two case studies from the tire and the computer industry *Computer-aided Systems in Public Transport* Mark Hickman, Pitu Mirchandani, Stefan Voß, 2008-01-23 This

volume consists of selected papers presented at the Ninth International Conference on Computer Aided Scheduling of Public Transport Coverage includes the use of computer aided methods and operations research techniques to improve information management network and route planning vehicle and crew scheduling and rostering vehicle monitoring and management and practical experience with scheduling and public transport planning methods *Consumption Structure and Macroeconomics* Reto Foellmi, 2006-03-30 This book offers a novel perspective that allows to incorporate changing consumption and production structure into models of economic growth Starting from the empirical observation that income and consumption structure are closely related it develops a tractable theoretical framework which enables to analyze macroeconomic models consistent with these empirical facts As a result central macroeconomic phenomena are better understood the reasons behind long run growth structural change and the influence of inequality on innovations and growth

The Complex Networks of Economic Interactions Akira Namatame, Taisei Kaizouji, Yuuji Arika, 2006-03-09 Understanding the mechanism of a socio economic system requires more than an understanding of the individuals that comprise the system It also requires understanding how individuals interact with each other and how the aggregated outcome can be more than the sum of individual behaviors This book contains the papers fostering the formation of an active multi disciplinary community on socio economic systems with the exciting new elds of age based modeling and econophysics We especially intend to increase the awareness of researchers in many elds with sharing the common view many economic and social activities as collectives of a large scale heterogeneous and interacting agents Economists seek to understand not only how individuals behave but also how the interaction of many individuals leads to complex outcomes Age based modeling is a method for studying socio economic systems exhibiting the following two properties 1 the system is composed of interacting agents and 2 the system exhibits emergent properties that is properties arising from the interactions of the agents that cannot be deduced simply by aggregating the properties of the system's components When the interaction of the agents is contingent on past experience and especially when the agents continually adapt to that experience mathematical analysis is typically very limited in its ability to derive the outcome **Strategic Competition in Oligopolies with Fluctuating**

Demand Leslie Neubecker, 2006-02-17 Dynamic oligopolistic competition has implications both for the strategic management of firms and for the design of an effective competition policy Consequently the present book considers the issue from a private and social perspective It discusses the potential pro and anticollusive effects of long term business strategies especially for cooperation and reinvestment in production financing and management compensation in markets with fluctuating demand The method of supergame theory is applied to integrate long run decisions and different types of demand into the analysis Aside from its contributions to the theoretical literature the book provides valuable insights into the design of competition policy The observed development of prices is an indicator of the extent of collusion in the market and can thereby be used to assess antitrust regulation in certain business areas and to focus the resources of competition authorities

on markets where conditions are conducive to collusion *Learning in Economic Systems with Expectations Feedback* Jan Wenzelburger, 2006-09-22 Recently economists have more and more focussed on scenarios in which agents' views of the world may be erroneous. These notes introduce the concept of perfect forecasting rules which provide best least squares predictions along the evolution of an economic system. The framework for nonparametric adaptive learning schemes is developed and it is argued that plausible learning schemes should aim at estimating a perfect forecasting rule taking into account the correct feedback structure of an economy. A link is provided between the traditional rational expectations view and recent behavioristic approaches **Microeconomic Evaluation of Labour Market Policies** Marco

Caliendo, 2006-03-30 Provides an overview of the microeconomic evaluation methods for evaluation of labour market and other public policies. This book focuses on the propensity score matching method and gives guidance for its implementation. It uses this method to evaluate the employment effects of job creation schemes on the participating individuals in Germany.

Strategic Supply Chain Management in Process Industries Reinhard Hübner, 2007-06-13 More and more often practitioners in process industry have to adapt their global production networks to changes in the competitive environment. A majority of the supply network design models proposed by academia does not sufficiently capture the economic and technical questions that have to be resolved. This work seeks to provide the necessary operations research decision support tools. It builds on the example of specialty chemicals industry which faces a strong increase of competitive pressure and historically grown production networks that typically lack a coherent design strategy. Decision makers have to define a global production network re design strategy. Therefore the book proposes a planning process split into the two phases global production network optimization and individual site selection. To support the former a comprehensive Mixed Integer Linear Programming model is proposed while an approach based on the Analytic Hierarchy Process is suggested for the latter. Findings from a case study demonstrate the applicability of OR methods to real world production networks **Complex**

Systems Approach to Economic Dynamics Abraham C.-L. Chian, 2007-08-17 Statistical analysis of stock markets and foreign exchange markets has demonstrated the intermittent nature of economic time series. A nonlinear model of business cycles is able to simulate intermittency arising from order chaos and chaos chaos transitions. This monograph introduces new concepts of unstable periodic orbits and chaotic saddles which are unstable structures embedded in a chaotic attractor and responsible for economic intermittency.

Strategic Trading in Illiquid Markets Burkart Mönch, 2006-01-13 The Area of Research and the Object of Investigation In this thesis we will investigate trading strategies in illiquid markets from a market microstructure perspective. Market microstructure is the academic term for the branch of financial economics that investigates trading and the organization of security markets see e.g. Harris 2002. Historically exchanges evolved as a location where those interested in buying or selling securities could meet physically to transact. Thus traditionally security trading was organized on exchange floors where so called dealers arranged all trades and provided liquidity by quoting

prices at which they were willing buy or sell Consequently the initial surge of the market microstructure literature focused predominantly on this type of market design which is often referred to as quote driven Nowadays the interest is shifting towards order driven markets Beginning with the Toronto Stock Exchange in the mid 1970s and increasing in frequency and scope this market structure has emerged as the preeminent form of security trading worldwide In order driven markets exchanges arrange trades by matching public orders often by employing automatic execution systems Introduction A major difference between a quote driven and an order driven market arises from the transparency pre and post trade The pre trade transparency concerns the question whether the order book is visible to the keeper only or whether it is open to the public

The Employment Effects of Technological Change Jens Rubart, 2007-08-15 The labor markets of important OECD countries show a similar picture high wages and low unemployment for skilled workers and low wages but high unemployment for low skilled workers During the last 10 years this fact has been studied under the hypothesis of skill biased technological change within the context of endogenous growth models Recent research however has shown that the employment and wage differentials vary at business cycle frequencies This book provides an empirical and theoretical examination of the short and medium run impacts of technological advances on the employment and wages of workers which differ in their earned educational degree Furthermore by introducing labor market frictions and wage setting institutions the author shows the importance of such imperfections in order to replicate empirical facts Due to the introduction of employment protection mechanisms and minimum wages the analysis accounts for key facts of continental European labor markets

Economic Dynamics and Information Jaroslav Zajac, 2007-08-01 This book analyzes the existence of equilibria in economies having a measured space of agents and a continuum of agents and commodities Excessive homogeneity with respect to agent productivity leads to instability and non uniqueness of a given stationary state and the indeterminacy of the corresponding stationary state equilibrium Sufficient heterogeneity leads to global saddle path stability uniqueness of a given stationary state and the global uniqueness of the corresponding equilibrium

Preferences in Negotiations Henner Gimpel, 2007-06-13 Negotiations are ubiquitous in business politics and private life In many cases their outcome is of great importance Yet negotiators frequently act irrationally and fail to reach mutually beneficial agreements Cognitive biases like overconfidence egocentrism and the mythical fixed pie illusion oftentimes foreclose profitable results A further cognitive bias is the attachment effect Parties are influenced by their subjective expectations formed on account of the exchange of offers they form reference points and loss aversion potentially leads to a change of preferences when expectations change This book presents a motivation formalization and substantiation of the attachment effect Thereby preferences and behavior are approached from a microeconomic and a psychological perspective Two experiments show clear evidence for a systematic bias The results can be used for prescriptive advice to negotiators either for debiasing or to systematically affect the counterparty

Risk-Averse Capacity Control in Revenue Management Christiane

Barz, 2007-08-16 If necessity is the mother of invention then deregulation is the father and revenue management also known as yield management is the couple's golden child at least as far as operations research is concerned Horner 2000 p 47

Deregulation had a significant impact on the U.S. airline industry in the late 1970s. Charter and low cost airlines such as People Express and Southwest were able to offer seats at a fraction of the price charged by established carriers like Pan Am and American Airlines. Due to their different cost structure it seemed to be impossible for the big carriers to offer tickets at the same low price. Yet they had to find a way to compete. Robert L. Crandall from American Airlines is widely credited with the solution to the problem: yield management today called revenue management since it maximizes revenue earned on a flight rather than yield revenue per passenger mile. The idea was simple: American Airlines flights were only half full on average. Offering the empty seats at a discount price would not only enable the carriers to compete with the low cost airlines but even create additional revenue if 1 it were possible to prevent cannibalization i.e. the sale of discount tickets to consumers who would otherwise be willing to pay full fare and if 2 it could be assured that only the seats that would otherwise be empty were sold at the low price.
