Environmental Decision Making An Information Technology Approach:

Environmental Sensing James K. Lein, 2011-09-18 Remote sensing has witnessed a renaissance as new sensor systems data collection capabilities and image processing methodologies have expanded the technological capabilities of this science into new and important applications areas Perhaps nowhere has this trend been more evident than in the study of earth environments Within this broad application area remote sensing has proven to be an invaluable asset supporting timely data gathering at a range of synoptic scales facilitating the mapping of complex landscapes and promoting the analysis of environmental process Yet remote sensing s contribution to the study of human environmental interaction is scattered throughout a rich and diverse literature spanning the social and physical sciences which frustrates access to and the sharing of the knowledge gained through these recent advances and inhibits the operational use of these methods and techniques in day to day environmental practice a recognized gap that reduces the effectiveness of environmental management programs The objective of this book is to address this gap and provide the synthesis of method and application that is currently missing in the environmental science re introducing remote sensing as an important decision support technology *Integrated Environmental Planning* James K. Lein, 2008-04-15 This up to date and comprehensive reference presents the fundamentals of environmental planning incorporating theory practice and case studies The book includes balanced coverage and real world examples to illustrate the concepts Political ethical and societal considerations are all addressed Presents the fundamentals of environmental planning and methodological material for analysis Real world examples are provided to illustrate concepts Political ethical and societal considerations are addressed Coverage is balanced between theoretical and practical *Futures Research and Environmental Sustainability* James K. Lein, 2016-12-08 This book explores the challenges of presenting sustainability as a more actionable or practical concept and identifying approaches that might offer useful assistance in addressing the temporal and spatial representation of sustainability The underlying premise of this book is that sustainability is a state realized in the future In that future there is a geographic arrangement of society and economy that agrees with its environmental setting This future perspective introduces a little examined subject area that can lend significant content to the sustainability challenge Futures Research *Information Technology in Environmental Engineering* Burkhardt Funk, Peter Niemeyer, Jorge Marx Gómez, 2013-09-14 Information technologies have evolved to an enabling science for natural resource management and conservation environmental engineering scientific simulation and integrated assessment studies Computing plays a significant role in the every day practices of environmental engineers natural scientists economists and social scientists The complexity of natural phenomena requires interdisciplinary approaches where computing science offers the infrastructure for environmental data collection and management scientific simulations decision support documentation and reporting Ecology environmental engineering and natural resource management comprise an excellent real world testbed for IT system demonstration while presenting new challenges for

computer science Complexity uncertainty and scaling issues of natural systems constitute a demanding application domain for modelling simulation and scientific workflows data management and reporting decision support and intelligent systems distributed computing environments geographical information systems heterogeneous systems integration software engineering accounting systems control systems as well as sustainable manufacturing and reverse logistics This books offers a collection of papers presented at the 6th International Conference on Environmental Engineering held in July 2013 in L neburg Germany Recent success stories in ecoinformatics promising ideas and new challenges are discussed among computer scientists environmental engineers industrial engineers economists and social scientists demonstrating new paradigms for problem solving and decision making
