Environmental Effects On Cognitive Abilities:

Environmental Effects on Cognitive Abilities Robert J. Sternberg, Elena L. Grigorenko, 2014-04-08 This book explores how the environment influences the development and maintenance of cognitive abilities. It offers both a response to those who focus primarily on genes as determiners of developmental outcomes and an elaboration of just what it is about contexts that makes for their effects on these outcomes. *Family Environment and Intellectual Functioning* Elena L. Grigorenko, Robert J. Sternberg, 2001-04-01 What is the impact of the family environment on us particularly with regard to our intellectual functioning? Does the role of early family environment wear off as some researchers have suggested or does it maintain or possibly even become more important as we grow older? This book examines the interrelationship between family environment and intellectual functioning in a lifespan perspective. Covering a wide range of topics, it provides the most comprehensive and up-to-date examination of life-span family influences on various aspects of intellectual function. For cognitive development, lifespan, and educational psychologists and scholars studying the family and its influences, this volume will help students learn about family effects, researchers update themselves in this active area of investigation, therapists understand problems in intellectual functioning in their clients, and in treating these clients successfully, and educators gain a better grasp on how the students they teach are products not only of their genes and environments in general but of their family environments in particular. Behavior Genetics of Cognition Across the Lifespan Deborah Finkel, Chandra A. Reynolds, 2013-07-09 Along with psychopathology, cognition has been one of the primary phenotypic focal points of the field of behavior genetics since its inception. Francis Galton's 1874 examination of eminent families in Britain was among the earliest attempts to investigate whether cognitive achievements run in families. This volume presents current methodologies for understanding cognitive abilities that move beyond the outdated nature vs. nurture paradigm. Recent advances in both collection and statistical modeling of twin data, particularly longitudinal twin data, make this an especially advantageous moment to produce a work that presents a collection of the groundbreaking research on cognitive abilities across the lifespan. This volume presents an overview of the current state of quantitative and molecular genetic investigations into the many facets of cognitive performance and functioning across the lifespan. **Handbook of Competence and Motivation** Andrew J. Elliot, Carol S. Dweck, David S. Yeager, 2017-03-24 Now completely revised, over 90% new, this handbook established the concept of competence as an organizing framework for the field of achievement motivation. With an increased focus on connecting theory to application, the second edition incorporates diverse perspectives on why and how individuals are motivated to work toward competence in school, work, sports, and other settings. Leading authorities present cutting-edge findings on the psychological, sociocultural, and biological processes that shape competence motivation across development, analyzing the role of intelligence, self-regulated learning, emotions, creativity, gender, and racial stereotypes, self-perceptions, achievement values, parenting practices, teacher behaviors, workplace environments, and many other factors. As a special bonus, purchasers of the second edition can download a supplemental e-book featuring several

notable highly cited chapters from the first edition New to This Edition Most chapters are new reflecting over a decade of theoretical and methodological developments Each chapter now has an applied as well as conceptual focus showcasing advances in intervention research Additional topics self regulation in early childhood self determination theory challenge and threat appraisals performance incentives achievement emotions job burnout gene environment interactions class based models of competence and the impact of social group membership Supplemental e book featuring selected chapters from the prior edition **Studying Correlations between Genetic Variation and Test Score Gaps** Gregory Connor,John G.R.

psychological research methods in education and psychology *Advances in the Psychology of Human Intelligence* Robert J. Sternberg, 2014-02-25 First published in 1987 Since the 1960s we have witnessed a remarkable resurgence of interest in the psychology of human intelligence In the late 1960s research in the field of intelligence seemed to have gone into at least partial remission But today a large number of investigators are pursuing active research programs concerning human intelligence *Advances in the Psychology of Human Intelligence* of which this is the fourth volume contains chapters by leaders in the field that document the progress being made toward understanding human intelligence **Discourses of Globalisation and Education Reforms** Joseph Zajda, 2022-05-17 This book focuses on discourses of effective learning environments globally for reducing discrimination in schools It offers innovative ideas concerning the future directions that education and policy reforms could take in order to promote equality social justice and access to quality of education for all The chapters offer a timely analysis of current issues affecting schooling and strategies for creating effective learning environments globally for overcoming discriminations in schools It is argued that that one of the most significant variables in creating effective learning environments for reducing classroom discrimination is the student s cultural identity the self concept and self esteem The next variables influencing students learning environment are motivational strategies self regulated learning and students active engagement in constructivist learning This book contributes in a very scholarly way to a more holistic understanding of the nexus between globalisation comparative education research and education reforms for reducing discrimination It will be beneficial for a broad spectrum of users including policy makers academics graduate students education policy researchers administrators and practitioners **Language, Memory, and Cognition in Infancy and Early Childhood** Janette B. Benson, Marshall M. Haith, 2010-05-22 Language cognition and memory are traditionally studied together prior to a researcher specializing in any one area They are studied together initially because much of the development of one can affect the development of the others Most books available now either tend to be extremely broad in the areas of all infant development including physical and social development or specialize in cognitive development language acquisition or memory Rarely do you find all three together despite the fact that they all relate to each other This volume consists of focused articles from the authoritative *Encyclopedia of Infant and Early Childhood Development* and specifically targets the ages 0-3 Providing summary overviews of basic and cutting edge research coverage includes attention assessment bilingualism categorization skills critical periods learning disabilities reasoning speech development etc This collection of articles provides an essential affordable reference for researchers graduate students and clinicians interested in cognitive development language development and memory as well as those developmental psychologists interested in all aspects of development Focused content on age 0-3 saves time searching for and wading through lit on full age range for developmentally relevant info Concise understandable and authoritative easier to comprehend for immediate applicability in research Separate Social Worlds of Siblings E. Mavis Hetherington, David Reiss, Robert Plomin, 2013-05-13 One of the

most notable findings in contemporary behavior genetics is that children growing up in the same family are not very comparable. Findings suggest that in order to understand individual differences between siblings it is necessary to examine not only the shared experiences but also the differences in experiences of children growing up in the same family. In the past decade a group of investigators has begun to examine the contributions of genetics and both shared and nonshared environment to development. As with many new research endeavors this has proven to be a difficult task with much controversy and disagreement not only about the most appropriate models and methods of analysis to be used but also about the interpretation of findings. Written by some of the foremost scholars working in the area on nonshared environment the papers in this book present their perspectives, concerns, strategies and research findings dealing with the impact of nonshared environment on individual differences in the development of siblings. This volume will have heuristic value in stimulating researchers to think in new ways about the interactions between heredity, shared and nonshared environment and the challenges in identifying their contributions to sibling differences. These papers should raise new questions about how to examine the contributions of genetic and environmental factors to development with consideration given to the findings of this study of sibling differences and nonshared environment. Further, these papers may encourage a growing trend to integrate genetic and environmental perspectives in studies of development.

Environmental effects on gut health in production animals Mike Kogut, Mariano Fernandez-Miyakawa, 2024-08-19. Optimal gut health is of vital importance to the performance of production animals: fish, poultry, swine, cattle. Gut health is key to making the productivity, well-being and sustainability of animal production more efficient. Directly and indirectly the environment is a powerful regulator of gastrointestinal physiology that decisively influences the functional state of the animal. Production animals reared under conventional conditions of intensive production are subjected to various exogenous and endogenous sources of environmental factors that can impact gut health. Exogenous factors are environmental stressors derived from external sources connected with diet, infectious disease, mycotoxin exposure, climate, heat and cold management practices, biosecurity level, housing, litter, feed access, quality and components. Endogenous factors are host-related such as age, sex, genetics and breed or are made within the host's body such as hormones and neurotransmitters in response to a stimulus, stressor or trigger. Endogenous factors serve to communicate signals both locally and distantly in the body. Understanding the interactions between the diverse environmental factors and the different physiological characteristics of the gastrointestinal tract allows us to advance the understanding of gut health and the ability to regulate animal production. The spirit of this book is to critically address how the interactions of different environmental stressors, both internal and external, influence the various functions of the gastrointestinal system of production animals and to be able to use the information to advance scientific research as well as improve the use of the productive tools available.

This crosstalk between metabolism and cellular signaling is mainly enabled by novel metabolite mediated modulation of enzymatic activity of rate limiting steps and post translational and epigenetic modifications for which metabolites serve as substrates
