Environmental Epidemiology Vol 1 Public Health And Hazardous Wastes:

Environmental Epidemiology, Volume 1 National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Environmental Epidemiology, 1991-01-01 The amount of hazardous waste in the United States has been estimated at 275 million metric tons in licensed sites alone Is the health of Americans at risk from exposure to this toxic material This volume the first of several on environmental epidemiology reviews the available evidence and makes recommendations for filling gaps in data and improving health assessments The book explores Whether researchers can infer health hazards from available data The results of substantial state and federal programs on hazardous waste dangers The book presents the results of studies of hazardous wastes in the air water soil and food and examines the potential of biological markers in health risk assessment The data and recommendations in this volume will be of immediate use to toxicologists environmental health professionals epidemiologists and other biologists

Environmental Epidemiology, Volume 2 National Research Council, Committee on Environmental Epidemiology, 1997-07-26 Determining the health risks to humans of exposure to toxic substances in the environment is made difficult by problems such as measuring the degree to which people have been exposed and determining causation whether observed health effects are due to exposure to a suspected toxicant Building on the well received first volume Environmental Epidemiology Hazardous Wastes and Public Health this second volume continues the examination of ways to address these difficulties It describes effective epidemiological methods for analyzing data and focuses on errors that may occur in the course of analyses The book also investigates the utility of the gray literature in helping to identify the often elusive causative agent behind reported health effects Although gray literature studies are often based on a study group that is quite small use inadequate measures of exposure and are not published many of the reports from about 20 states that were examined by the committee were judged to be publishable with some additional work The committee makes recommendations to improve the utility of the gray literature by enhancing quality and availability

the Army's Zinc Cadmium Sulfide Dispersion Tests National Research Council, Division on Earth and Life

Studies, Commission on Life Sciences, Subcommittee on Zinc Cadmium Sulfide, 1997-05-30 During the 1950s and 1960s the U S Army conducted atmospheric dispersion tests in many American cities using fluorescent particles of zinc cadmium sulfide ZnCdS to develop and verify meteorological models to estimate the dispersal of aerosols Upon learning of the tests many citizens and some public health officials in the affected cities raised concerns about the health consequences of the tests This book assesses the public health effects of the Army's tests including the toxicity of ZnCdS the toxicity of surrogate cadmium compounds the environmental fate of ZnCdS the extent of public exposures from the dispersion tests and the risks of such exposures *Poisoned Profits* Philip Shabecoff, Alice Shabecoff, 2008-08-12 In this shocking and sobering book two fearless

journalists directly and definitively link industrial toxins to the current rise in childhood disease and death In the tradition of *Silent Spring* *Poisoned Profits* is a landmark investigation an eye opening account of a country that prizes money over children's health With indisputable data Philip Shabecoff and Alice Shabecoff reveal that the children of baby boomers the first to be raised in a truly toxified world have higher rates of birth defects asthma cancer autism and other serious illnesses than previous generations In piercing case histories the authors identify the culprit as corporate pollution Here are the stories of such places as Dickson Tennessee where babies were born with cleft lips and palates after landfill chemicals seeped into the water and Port Neches Texas where so many graduates of a high school near synthetic rubber and chemical plants contracted cancer that the school was nicknamed Leukemia High The danger to our children isn't just in the outside world though The Shabecoffs provide evidence that our homes are now infested with everything from dangerous flame retardants in crib mattresses to harmful plastic softeners in teething rings to antibiotics and arsenic in chicken additives that are absorbed by growing and physically vulnerable kids as well as by pregnant women Compounding the problem are chemical corporations that sabotage investigations and regulations a government that refuses to police these companies and corporate hired scientists who keep pertinent secrets massaged with skewed data of their own *Poisoned Profits* also demonstrates how people are fighting back whether through grassroots parents groups putting pressure on politicians the rise of ecotheology in the pulpits of formerly indifferent churches or the new green chemistry being practiced in labs to

replace bad elements with good The Shabecoffs also include helpful tips on reducing risks to children in how they eat and play and in how parents clean and maintain their homes Powerful unflinching and eminently readable Poisoned Profits is a wake up call that is bound to inspire talk and force change Deceit and Denial Gerald Markowitz,David Rosner,2013-01-15 Environmental Health I Health Care Policy I History Of Medicine **Lead Wars** Gerald Markowitz,David Rosner,2014-08-15 In this incisive examination of lead poisoning during the past half century Gerald Markowitz and David Rosner focus on one of the most contentious and bitter battles in the history of public health Lead Wars details how the nature of the epidemic has changed and highlights the dilemmas public health agencies face today in terms of prevention strategies and chronic illness linked to low levels of toxic exposure The authors use the opinion by Maryland s Court of Appeals which considered whether researchers at Johns Hopkins University s prestigious Kennedy Krieger Institute KKI engaged in unethical research on 108 African American children as a springboard to ask fundamental questions about the practice and future of public health Lead Wars chronicles the obstacles faced by public health workers in the conservative pro business anti regulatory climate that took off in the Reagan years and that stymied efforts to eliminate lead from the environments and the bodies of American children **Environmental and Chemical Toxins and Psychiatric Illness** James S. Brown,2008-08-13 During the past 60 years the number of chemical disasters worldwide from military occupational and environmental sources has risen at an alarming rate The profound controversy surrounding many chemicals makes objective analysis nearly impossible Yet now more than ever with the daily exposure to a wide range of chemicals and the increased threat of chemical terrorism it is critical that we understand the role of chemicals in causing psychiatric illness Unlike related books this remarkable reference is intended specifically for psychiatric applications and is thus the definitive sourcebook for the many professionals called on to respond to these events This work stands alone as the first on this topic to be written by a psychiatrist and the first to bring together the military occupational and environmental exposures causing psychiatric illness including multiple chemical sensitivities mass hysteria radiation exposures community stress reactions and Gulf War and other syndromes Unique highlights include A summary of the reported psychiatric symptoms attributed to each chemical class chemical weapons pesticides fumigants metals solvents gases PCBs Agent Orange and other miscellaneous chemicals in tables for easy reference We use personal care products take prescription drugs pump gasoline drink alcohol and spray insecticides as part of our everyday lives Yet rarely do we realize that significant exposures to the chemicals described in this book many of which we are exposed to in daily activities can damage the central nervous system causing psychiatric illness A comprehensive bibliography in every chapter of all the important material in English language medical journals and books that has appeared on this subject since the late 19th century These bibliographies cover everything from the first published reports of the dangers of carbon disulfide in the French rubber industry dangers that American medicine ignored for years through more recent large scale chemical exposures that have serious long term consequences e g Love Canal The latest

information about terrorist and military uses of chemical weapons of critical relevance in psychiatry today from World War I combatants exposed to chlorine phosgene mustard gas arsenic and cyanide to the first organophosphate or nerve gases such as tabun and sarin developed by the Germans before and during World War II and used by Iraq in the Gulf War and by a religious cult in the terrorist subway attacks in Tokyo and Matsumoto Japan Quite simply this book is a must have for psychiatric and medical professionals everywhere with extended appeal among laypersons such as environmental consumer advocates attorneys insurance professionals industrial hygienists disaster planners and medical librarians **New and Forthcoming Books** National Academy Press (U.S.),1993 **Principles and Practice of Environmental Medicine** A.B.
