Environmental Ethics and Law Robert Jay Goldstein, 2004 This collection explores a broad range of topics approaching environmental ethics from many different angles A common thread running through the volume is the analysis of ethical principles as the backbone of practical policies and law for the benefit of the environment and ultimately for the benefit of its inhabitants The contributors are all at the forefront of their respective fields and fall into two essential categories well established scholars in the field of environmental ethics and a group of newer voices that have followed what might be characterized as the first wave of environmental ethics scholarship International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy Library of Congress Subject Headings Library of Congress. Office for Subject Cataloging Policy, 1998 The Routledge Handbook of Animal Ethics Bob Fischer, 2019-12-06 There isn t one conversation about animal ethics Instead there are several important ones that are scattered across many disciplines This volume both surveys the field of animal ethics and draws professional philosophers graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments To that end the volume contains more nonphilosophers than philosophers explicitly inviting scholars from other fields such as animal science ecology

economics psychology law environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals The Routledge Handbook of Animal Ethics is composed of 44 chapters all appearing in print here for the first time and organized into the following six sections I Thinking About Animals II Animal Agriculture and Hunting III Animal Research and Genetic Engineering IV Companion Animals V Wild Animals Conservation Management and Ethics VI Animal Activism The chapters are brief and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study The volume covers everything from animal cognition to the state of current fisheries from genetic modification to intersection animal activism It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals <u>Library of Congress Subject Headings: A-E</u> Library of Library of Congress Subject Headings Library of Congress. Henning, Zack Walsh, 2020-02-25 This book examines from different perspectives the moral significance of non human members of the biotic community and their omission from climate ethics literature The complexity of life in an age of rapid climate change demands the development of moral frameworks that recognize and respect the dignity and agency of both human and non human organisms Despite decades of careful work in non anthropocentric approaches to environmental ethics recent anthologies on climate ethics have largely omitted non anthropocentric approaches This multidisciplinary volume of international scholars tackles this lacuna by presenting novel work on non anthropocentric approaches to climate ethics Written in an accessible style the text incorporates sentiocentric biocentric and ecocentric perspectives on climate change With diverse perspectives from both leading and emerging scholars of environmental ethics geography religious studies conservation ecology and environmental studies this book will offer a valuable reading for students and scholars of these fields Philosophy, Technology, and the Environment David M. Kaplan, 2017-02-24 Contributions by prominent scholars examining the intersections of environmental philosophy and philosophy of technology Environmental philosophy and philosophy of technology have taken divergent paths despite their common interest in examining human modification of the natural world Yet philosophers from each field have a lot to contribute to the other Environmental issues inevitably involve technologies and technologies inevitably have environmental impacts In this book prominent scholars from both fields illuminate the intersections of environmental philosophy and philosophy of technology offering the beginnings of a rich new hybrid discourse All the contributors share the intuition that technology and the environment overlap in ways that are relevant in both philosophical and practical terms They consider such issues as the limits of technological interventions in the natural world whether a concern for the environment can be designed into things how consumerism relates us to artifacts and environments and how food and animal agriculture raise questions about both culture and nature They discuss among other topics the pessimism and dystopianism shared by

environmentalists environmental philosophers and philosophers of technology the ethics of geoengineering and climate change the biological analogy at the heart of industrial ecology green products and sustainable design and agriculture as a bridge between technology and the environment Contributors Braden Allenby Raymond Anthony Philip Brey J Baird Callicott Brett Clark Wyatt Galusky Ryan Gunderson Benjamin Hale Clare Heyward Don Idhe Mark Sagoff Julian Savulescu Paul B Thompson Ibo van de Poel Zhang Wei Kyle Powys Whyte Human Rights Laura Westra, 2011-11-01 International law has evolved to protect human rights But what are human rights Does the term have the same meaning in a world being transformed by climate change and globalized trade Are existing laws sufficient to ensure humanity s survival Drawing on case law and practice and examples from philosophy law and ecology Laura Westra argues that the current system is not adequate international law privileges individual over collective rights permitting multinational corporations to overlook the collectivity and the environment in their quest for wealth and power Unless policy makers redefine human rights and reformulate environmental law and policies to protect the preconditions for life itself water food clean air and biodiversity humankind faces the complete loss of the ecological commons the preservation of which is one of our most basic human rights A new kind of cosmopolitanism one centred on the United Nations offers the best hope for preserving our common heritage and the survival of future generations Roaming Free Like a Deer Daniel Capper, 2022-03-15 By exploring lived ecological experiences across seven Buddhist worlds from ancient India to the contemporary West Roaming Free Like a Deer provides a comprehensive critical and innovative examination of the theories practices and real world results of Buddhist environmental ethics Daniel Capper clarifies crucial contours of Buddhist vegetarianism or meat eating nature mysticism and cultural speculations about spirituality in nonhuman animals Buddhist environmental ethics often are touted as useful weapons in the fight against climate change However two formidable but often overlooked problems with this perspective exist First much of the literature on Buddhist environmental ethics uncritically embraces Buddhist ideals without examining the real world impacts of those ideals thereby sometimes ignoring difficulties in terms of practical applications Moreover for some understandable but still troublesome reasons Buddhists from different schools follow their own environmental ideals without conversing with other Buddhists thereby minimizing the abilities of Buddhists to act in concert on issues such as climate change that demand coordinated large scale human responses With its accessible style and personhood ethics orientation Roaming Free Like a Deer should appeal to anyone who is concerned with how human beings interact with the nonhuman environment The Black Book Meera Kaura Patel, 2011 **Environmental Justice and the Rights of Indigenous Peoples** Laura Westra, 2012-05-16 More than 300 million people in over 70 countries make up the worlds indigenous populations Yet despite ever growing pressures on their lands environment and way of life through outside factors such as climate change and globalization their rights in these and other respects are still not fully recognized in international law In this incisive book Laura Westra deftly reveals the lethal effects that damage to ecological integrity can

have on communities Using examples in national and international case law she demonstrates how their lack of sufficient legal rights leaves indigenous peoples defenceless time and again in the face of governments and businesses who have little effective incentive to consult with them let alone gain their consent in going ahead with relocations mining plans and more The historical background and current legal instruments are discussed and through examples from the Americas Africa Oceania and the special case of the Arctic a picture emerges of how things must change if indigenous communities are to survive It is a warning to us all from the example of those who live most closely in tune with nature and are the first to feel the impact when environmental damage goes unchecked International Human Rights Cher Weixia Chen, Alison Dundes Renteln, 2022-08-11 This book provides an interdisciplinary overview of international human rights issues offering truly international coverage including the Global South Considering the philosophical foundations of human rights Chen and Renteln explore the interpretive difficulties associated with identifying what constitute human rights abuses and evaluate various perspectives on human rights This book goes on to analyze institutions that strive to promote and enforce human rights standards including the United Nations system regional human rights bodies and domestic courts It also discusses a wide variety of substantive human rights including genocide torture capital punishment and other cruel and unusual punishments In particular the book offers an accessible introduction to key understudied topics within human rights such as socioeconomic rights cultural rights and environmental rights It also focuses on the rights of marginalized groups including children's rights of persons with disabilities women's rights labor rights indigenous rights and LGBTQ rights making this an engaging and invaluable resource for the contemporary student The Growing Gap Between Emerging Technologies and Legal-Ethical Oversight Gary E. Marchant, Braden R. Allenby, Joseph R. Herkert, 2011-05-19 At the same time that the pace of science and technology has greatly accelerated in recent decades our legal and ethical oversight mechanisms have become bogged down and slower This book addresses the growing gap between the pace of science and technology and the lagging responsiveness of legal and ethical oversight society relies on to govern emerging technologies Whether it be biotechnology genetic testing nanotechnology synthetic biology computer privacy autonomous robotics or any of the other many emerging technologies new approaches are needed to ensure appropriate and timely regulatory responses This book documents the problem and offers a toolbox of potential regulatory and governance approaches that might be used to ensure more responsive oversight International Environmental Law ,2007 **Ecological Integrity and** International Law Klaus Bosselmann, Kathryn Gwiazdon, Virginia Zambrano, 2025-02-11 This book examines how the principle of ecological integrity in international law and governance can help address our current global crises The principle of ecological integrity points to the basic foundations that must exist for life all life not only to exist but also to flourish Ecological integrity or well being cuts across legal and geopolitical spheres insofar as it is the decisions within our systems of governance that determine the integrity of our various living systems This book provides a comprehensive examination of

how the principle of ecological integrity can help us respond to our current crises of global conflict and insecurity Including chapters by both academics and practitioners and by both experienced and emerging authors the book covers a range of contemporary issues the climate crisis war the pandemic food and more at the intersection of peace public health and global security It will appeal to scholars across a range of fields including law sociology political science environmental studies and Global Animal Law from the Margins Iyan Offor, 2023-08-01 This book critically engages the emerging field of global animal law from the perspective of an intersectional ethical framework Reconceptualising global animal law this book argues that global animal law overrepresents views from the west as it does not sufficiently engage views from the Global South as well as from Indigenous and other marginalised communities Tracing this imbalance to the early development of animal law's reaction to issues of international trade the book elicits the anthropocentrism and colonialism that underpin this bias In response the book outlines a new intersectional second wave of animal ethics Incorporating marginalised viewpoints it elevates the field beyond the dominant concern with animal welfare and rights And drawing on aspects of decolonial thought earth jurisprudence intersectionality theory and posthumanism it offers a fundamental rethinking of the very basis of global animal law The book's critical yet practical new approach to global animal law will appeal to animal law and environmental law experts legal theorists and those working in the areas of animal studies and ecology Biolaw and Policy in the Twenty-First Century Erick Valdés, Juan Alberto Lecaros, 2019-01-24 This book offers an impressive collection of contributions on the epistemology of international biolaw and its applications both in the legal and ethical fields Bringing together works by some of the world's most prominent experts on biolaw and bioethics it constitutes a paradigmatic text in its field In addition to exploring various ideologies and philosophies including European American and Mediterranean biolaw traditions it addresses controversial topics straight from today s headlines such as genetic editing the dual use dilemma and neurocognitive enhancement The book encourages readers to think objectively and impartially in order to resolve the ethical and juridical dilemmas that stem from biotechnological empowerment and biomedical techniques Accordingly it offers a valuable resource for courses on biolaw law bioethics and biomedical research as well as courses that discuss law and the biosciences at different professional levels e g in the courts biomedicalindustry pharmacological companies and the public space in general
