Planning and Ecology R. D. Roberts, T. M. Roberts, 2013-11-11 Professional planning is commonly defined as an activity which is concerned with the rational allocation or exploitation of resources for man's maximum short and long term benefit The science of ecology is the study of the basic components of these resources soil water air etc and their inter relationships with living organisms Planning and ecology therefore have many common interests and as such have long been associated in resource management This association was for example reflected as early as the 19th century in the writings of Patrick Geddes the progenitor of modern town planning whose training as a biologist led him to re interpret the phenomena of urbanization in ecological terms Geddes 1886 Since the time of Geddes the place of ecology has declined in planning circles as other professions and considerations initially public health and engineering latterly economic and sociological have become more central The reasons for this shifting emphasis are three fold First they reflect changing social attitudes and aspirations in the post war period Secondly many other professions and persuasions agriculturalists foresters industrialists etc became organized as pressure groups and helped shape public attitudes and governmental actions Thirdly and by far the most important reason is the prevalence of misconceptions about ecology Too many people perhaps misled by the debate surrounding the environmental movement equate ecology with conservation In reality conservation is but one component part of ecology

Department of Defense, 1991 **Environmental Groups and Legal Expertise** Carolyn Abbot ,Maria Lee ,2021-03-04 Environmental Groups and Legal Expertise explores the use and understanding of law and legal expertise by environmental groups Rather than the usual focus on the court room it scrutinises environmental NGO advocacy during the extraordinarily dramatic Brexit process from the referendum on leaving the EU in June 2016 to the debate around the new Environment Bill in the first half of 2020 There is generally a weak understanding of both the complexity and the potential of legal expertise in the environmental NGO community Legal expertise can be more than a tool for campaigners and more than litigation it provides distinctive ways of both seeing the world and changing the world The available legal resource in the sector is not just a practical limit on what can be done but spills into the very understanding of what should be done and what resource is needed Mutually reinforcing links between capacity understanding culture and investment affect legal expertise across the board There are however pockets of sophisticated legal expertise in the community and legal expertise was heavily and often effectively used in the anomalously law heavy Brexit environment debate The ability to call on thinly spread legal expertise in a crisis was in part due to effective NGO collaboration around Brexit environment
