Environmental Management of Aquaculture Effluent Adrian B. Jones, 1999 *Coastal Environmental Management for Aquaculture Sustainable*, 1997 *Legal Regimes for Environmental Protection* Hans-Joachim Koch, Doris König, Joachim Sanden, Roda Verheyen, 2015-08-04

In *Legal Regimes for Environmental Protection* Hans-Joachim Koch, Doris König, Joachim Sanden, and Roda Verheyen offer important new insights into legal questions on climate change at a regional level and the legal instruments available to address environmental problems on critical maritime topics. An international group of eminent authors put forward proposals for solving legal challenges in International Law, European Law, and domestic law. Important themes including national climate protection law, regulations e.g. in the U.S.A., the EU, China, and South Africa, regulations on International Fisheries, Mariculture, and Environmental Protection, Regional Fisheries Management Organisations, Overfishing, and Ocean Governance are addressed. This volume is of particular relevance for academic and practicing lawyers with an interest in the recent legal discussions on climate change law and Environmental Law of the Sea.

This title is an important reference on current knowledge and expertise in one convenient and accessible source. The selected articles, all written by experts in their field, fall into several categories: A *Directory of Impact Assessment Guidelines* International Institute for Environment and Development, 1998 *Valuing the Environment in Developing Countries* David Pearce, Corin Pearce, Charles Palmer, 2002-01-01

The substantial and growing interest in the monetary valuation of preferences for environmental improvement and against environmental damage has prompted a demand for case studies illustrating methodologies and applications of valuation techniques. In this book, the first of two volumes, the authors provide detailed case studies of valuation techniques that have been used in developing countries. They demonstrate that valuation works and that it can yield significant insights into policy-relevant issues regarding conservation and economic development. The authors address a whole range of environmental issues under the broad themes of water and air quality, biological diversity, and forest functions. The economic approaches covered include contingent valuation, hedonic property prices, travel cost methodologies, and benefits transfer. They also go on to look at the idea of

extending national accounts to reflect changes in environmental assets Examples of the varied and interesting case studies include valuing improvements to sanitation in Malaysia the value of visits to game parks in South Africa and tropical forest values in Mexico They highlight how valuation techniques can be applied often with limited resources to critical development issues Academics and practitioners of environmental economics will draw great value from this unique and original work as will the many multilateral and bilateral aid agencies The book will also prove a valuable addition to graduate and undergraduate courses in environmental economics where there is a need for case material
