Ecosystem Function in Heterogeneous Landscapes Gary M. Lovett,Clive G. Jones,Monica G. Turner,Kathleen C. Weathers,2007-12-21 Among the most dif cult problems in the life sciences is the challenge to understand the details of how ecosystems watersheds landscapes function Yet the welfare of all life not just the human species depends upon the s cessful functioning of diverse and complicated ecosystems each with va ous dimensions and compositions Central to this working is the dominance and to a major extent control of ecosystems by organisms which means that these systems are constantly changing as the component organisms change and evolve Such changes increase the challenge to understand the functioning of ecosystems and landscapes Moreover und standing the interactions among the myriad components of these systems is mind boggling as there are scores of biotic probably many thousands of species when the microbial components are fully enumerated through genomics and countless abiotic ions molecules and compounds entities all simultaneously interacting and responding to diverse external factors to produce functional or dysfunctional environments for life This book focuses on the problems of connectedness and ecosystem fu tioning It is dif cult enough to understand how an ecosystem functions when it is considered in isolation but all ecosystems are open and c nected to everything else Clearly the inputs to any ecosystem are the o puts from others and vice versa and as such the uxes represent major if not critical points for managing or changing the overall functioning of an ecosystem or landscape A major challenge is to nd appropriate conceptual frameworks to address these complicated problems
