Environmental Policy and Impact Assessment in Japan Brendan F. D. Barrett, Riki Therivel, 2019-03-21 First published in 1991 Japanese attitudes to pollution and environmental protection were distinctly equivocal. The Japanese are a nature loving people yet they are responsible for widespread environmental destruction. Japan has some of the world's strictest environmental quality standards but the country also has some of the world's most environmentally damaged areas. In this book the authors present a broad and detailed analysis of policy and process in Japan in the late twentieth century. Brendan Barrett and Riki Therivel, who both have extensive research experience in Japan, describe interest group participation in Japan's environmental policy making and give an historical review of the relationship between economic growth and environmental problems. They look at the framework for environmental policy making and outline the system for environmental management. This is complemented by a discussion of Environmental Impact Assessment and by live case studies of the practical realities of EIA in Japan. With environmental problems reaching global proportions, countries all over the world have much to learn from the experience of Japan and the book will be extremely useful to national government officials, to local planning officers responsible for EIA and to environmental consultants working for commercial and industrial companies. It will also be essential reading for students of geography, environmental studies, Japanese studies and planning/economics.

Environmental Assessment Jane Holder, 2004 Environmental Assessment is an inherently interdisciplinary mechanism which is concerned with the input and quality of information about the likely effects of development upon the environment. It is a useful tool for examining aspects of the relationship between law, governance and the regulation of decision making which have been central to the development of environmental law. In this volume the procedural mechanism of environmental assessment is analysed. The author argues that notwithstanding its procedural nature, environmental assessment is highly material to the outcome of a decision. A major focus of this analysis is the enhanced role of the developer in shaping the outcome of a decision by assuming responsibility for providing information on which a decision will be based in accordance with a broader agenda of expanding the roles and responsibilities of participants in environmental decision making. The author draws upon several contemporary projects as case studies of assessment: a global port, an offshore windfarm, a flood defence strategy and a recreation centre. In analysing these sites of decision making from a legal perspective, the author touches upon the key determinants of environmental assessment: discretion, the significance of environmental effects, alternative options and participatory rights. Finally, the volume looks to

The International Law of Environmental Impact Assessment Neil Craik, 2008-02-21 The central idea animating environmental impact assessment EIA is that decisions affecting the environment should be made through a comprehensive evaluation of predicted impacts Notwithstanding their evaluative mandate EIA processes do not impose specific environmental standards but rely on the creation of open participatory and information rich decision making settings to bring about environmentally benign outcomes In light of this tension between process and substance Neil Craik assesses whether EIA as a method of implementing international environmental law is a sound policy strategy and how international EIA commitments structure transnational interactions in order to influence decisions affecting the international environment Through a comprehensive description of international EIA commitments and their implementation with domestic and transnational governance structures and drawing on specific examples of transnational EIA processes the author examines how international EIA commitments can facilitate interest coordination and provide opportunities for persuasion and for the internalisation of international environmental norms

presentation of the EIA process *The European Impact Assessment and the Environment* Kilian Bizer, Sebastian Lechner, Martin Führ, 2010-08-03 This volume contains papers presented in a workshop of international experts in September 2008 in Berlin. The experts discussed how environmental consequences of EU legislation can be incorporated in a more effective way. In other words, this contribution focuses on the question of which measures can strengthen the consideration of environmental effects in the EU impact assessment procedure and in the subsequent legislative decision making process. This allows drawing conclusions for the impact assessment process in Germany. This volume begins with an introductory paper by Bizer and Lechner, which served as the basis for discussion in our workshop. The questions raised in this paper are addressed by the authors of the subsequent chapters. Stephen White (DG Environment, EU Commission) discusses the impact assessment from an internal perspective within the Commission. Pendo Maro (European Environmental Bureau) reviews the impact assessment practice from the perspective of an environmental NGO. Martin Schmidt et al. discuss the potential for more formalism to strengthen environmental issues within impact assessments and favour a checklist. **Environmental Law in**
