Kochtcheeva, 2008-12-18 As environmental problems continue to pose a threat to the well being of people all over the world achieving pollution control through innovative methods and at a lower cost becomes very attractive. However cost effectiveness and technical rationality are often at odds with political goals and policy traditions. Lada V. Kochtcheeva analyzes the introduction of flexible laws and regulations in both air and water quality policies in the United States and the Russian Federation from the 1960s to the present and highlights the replacement of command and control systems with flexible instruments such as incentive programs, tradable permits and pollution charges. The volume examines the different conditions under which environmental policymaking takes place in different regions of the world and tracks the theoretical, conceptual and empirical developments that have been made in recent years. It also highlights emerging areas where new and/or additional research and reflection are warranted. Divided into four key parts, the accessible structure and the nature of the contributions allow the reader to quickly find a concise expert review on topics that are most likely to arise in the course of conducting research or developing policy and to obtain a broad, reliable survey of what is presently known about the subject. The resulting compendium is an essential resource for students, scholars and policymakers working in this vital field.

Implementation of Oil Related Environmental Policies in Nigeria Fidelis Allen, 2011-10-18. Fidelis Allen situates violent conflict in the Niger Delta in the context of failure by government to effectively implement relevant oil-related environmental policies intended to achieve sustainable development, arguing that oil and environment-related conflicts in the region are reflections of this failure. This failure is premised on the notion that the goal of sustainable development as clearly outlined in Nigeria's National Environmental Policy and implied in various other policies can be pursued through the activities of government individuals and business organisations that are capable of engendering economic and social progress for communities that depend on the environment for their survival. In fact, available evidence shows that government and oil company activities or failures to act actually contribute to the despoliation of the environment in the Niger Delta. Despite existing environmental legislations and guidelines, unsafe waste disposal, flaring of gas and oil spillage remain key features of oil industry operations in the Niger Delta. Not surprisingly, the book highlights a lack of synergy between government and oil company activities and the attainment of sustainable development as a key goal of the environmental policy of the government. In other words, the activities of the government and oil companies do not sufficiently promote

sustainable development The net consequence is reflected in the frustrations of local justice and environmental movement groups about the political processes which deter rather than enable their agitation for improvements in local living conditions and development in the Niger Delta Over time those frustrations begin to manifest at different levels including aggressive and violent behaviours against oil companies and government security agencies for their contributory roles
