Environmental Change:

The Institutional Dimensions of Environmental Change Oran R. Young, 2002 A study that lays the foundation for cumulative research on the roles institutions play in causing and confronting environmental changes **Global Environmental Change** Antoinette Mannion, 2014-09-19 Now in its second edition This text has been extensively revised and rewritten to reflect the growth in environmental research during the last decade Human induced environmental change is occurring at such a rapid rate that inevitably the fundamental processes involved in biogeochemical cycling are being altered Global Environmental Change considers alterations to the biogeochemical cycles of carbon nitrogen sulphur and other elements as a result of industrial technological development and agriculture which have significantly altered the natural environment The book adopts a temporal and spatial approach to environmental change beginning with the natural environmental change of the Quaternary period and continuing with the culturally induced change since the inception of agriculture 10 000 years ago **Global Environmental Change** R E Hester, R M Harrison, 2007-10-31 Few people today are unaware of the far reaching effects of global environmental change and it is now generally accepted that human activities are the root cause of the changes in climate Global Environmental Change provides a balanced overview of the problems associated with global warming Commencing with a chapter on the evidence for global warming presented by Sir John Houghton the book then goes on to discuss the many problems associated with air pollution Subsequent chapters cover rising sea levels the effect of climate change on human health and the role of environmental performance in industry This readable and factually detailed book will have wide appeal but will be of particular interest to environmental scientists industrial managers policy makers and students *Encyclopedia of Environmental Change* John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Land use change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy

Global Environmental Change and Human Security Richard A. Matthew, Jon Barnett, Bryan McDonald, Karen L. O'Brien, 2009-10-09 Experts discuss the risks global environmental change poses for the human security including disaster and disease violence and increasing inequity In recent years scholars in international relations and other fields have begun to conceive of security more broadly moving away from a state centered concept of national security toward the idea of human security which emphasizes the individual and human well being Viewing global environmental change through the lens of human security connects such problems as melting ice caps and carbon emissions to poverty vulnerability equity and conflict This book examines the complex social health and economic consequences of environmental change across the globe In chapters that are both academically rigorous and policy relevant the book discusses the connections of global environmental change to urban poverty natural disasters with a case study of Hurricane Katrina violent conflict with a study of the decade long Nepalese civil war population gender and development The book makes clear the inadequacy of traditional understandings of security and shows how global environmental change is raising new unavoidable questions of human insecurity conflict cooperation and sustainable development Contributors W Neil Adger Jennifer Bailey Jon Barnett Victoria Basolo Hans Georg Bohle Mike Brklacich May Chazan Chris Cocklin Geoffrey D Dabelko Indra de Soysa Heather Goldsworthy Betsy Hartmann Robin M Leichenko Laura Little Alexander Lopez Richard A Matthew Bryan McDonald Eric Neumayer Kwasi Nsiah Gyabaah Karen L O'Brien Marvin S Soroos Bishnu Raj Upreti

Environmental Change and the World's Futures Jonathan Paul Marshall, Linda H. Connor, 2015-08-27 Climate change and ecological instability have the potential to disrupt human societies and their futures Cultural social and ethical life in all societies is directed towards a future that can never be observed and never be directly acted upon and yet is always interacting with us Thinking and acting towards the future involves efforts of imagination that are linked to our sense of being in the world and the ecological pressures we experience The three key ideas of this book ecologies ontologies and mythologies help us understand the ways people in many different societies attempt to predict and shape their futures Each chapter places a different emphasis on the linked domains of environmental change embodied experience myth and fantasy politics technology and intellectual reflection in relation to imagined futures The diverse geographic scope of the chapters includes rural Nepal the islands of the Pacific Ocean Sweden coastal Scotland North America and remote rural and urban Australia This book will appeal to researchers and students in anthropology sociology environmental studies cultural studies psychology and politics

Assessing Vulnerability to Global Environmental Change Richard J. T. Klein, Anthony G. Patt, 2012-05-16 Assessing the vulnerability of human populations to global environmental change particularly climate change is now the main imperative of research and international action

However much of the research into vulnerability is not designed to feed directly into decision making and policy creating a gap between the knowledge created by researchers and what is required by decision makers This book seeks to rectify this problem and bridge the gap It discusses vulnerability as the central theme and brings together many different applications from disaster studies climate change impact studies and several other fields and provides the most comprehensive synthesis of definitions theories formalization and applications to date illustrated with examples from different disciplines regions and periods and from local through to regional national and international levels Case study topics cover sea level rise vulnerability to changes in ecosystem services assessing the vulnerability of human health and double exposure to climate change and trade liberalization amongst other issues Research outcomes stress that science policy dialogues must be transparent to be effective and concentrate on a mutual understanding of the concepts used A key research finding is that the most useful information for decision makers is that which shows the separate causes and drivers of vulnerability rather than presenting vulnerability in an aggregated form The book concludes with a unifying framework for analysing integrated methodologies of vulnerability assessment and guiding how research and policy can be linked to reduce vulnerability

The Routledge Handbook of Urbanization and Global Environmental Change Karen Seto, William Solecki, Corrie Griffith, 2015-12-22 This volume provides a comprehensive overview of the interactions and feedbacks between urbanization and global environmental change A key focus is the examination of how urbanization influences global environmental change and how global environmental change in turn influences urbanization processes It has four thematic foci Theme 1 addresses the pathways through which urbanization drives global environmental change Theme 2 addresses the pathways through which global environmental change affects the urban system Theme 3 addresses the interactions and responses within the urban system in response to global environmental change Theme 4 centers on critical emerging research

Glaciers and Environmental Change Atle Nesje, 2016-04-29 This authoritative new text provides a thorough updated account of glaciers and ice sheets as monitors and indicators of environmental change It examines the record of environmental change within glaciers and ice sheets and that of past environments left by retreating glaciers These themes are examined within the context of environmental change in general and global climate change in particular Methods of using palaeoenvironmental records are assessed and the implications for future environmental change are discussed Evidence from glacier ice left in the landscape or within the geological record provides one of the most important sources of information on environmental change *Glaciers and Environmental Change* is a comprehensive account of glaciers and ice sheets as monitors and indicators of environmental change Based on the latest research this book consolidates a diverse range of data and explains their applications it also assesses methods of using palaeoenvironmental records This authoritative new text examines not only the records of environmental change within glaciers but also that of past environments left by retreating glaciers These themes are examined within the context of contemporary debates in environmental change and the volume also seeks to draw

conclusions concernign past present and future climatic change in relation to glaciers Tourism and Global Environmental Change Stefan Gössling,Michael C. Hall,2006-06-07 This fascinating book is the first comprehensive analysis of the economic social and political interrelationships between tourism and global environmental change one of the most significant issues facing humankind today Its contributors argue that the impacts of these changes are potentially extremely serious both for the tourism industry and for the communities dependent upon it Integrating knowledge from the social and physical sciences this significant book explores they key issues surrounding global environmental change as well as government and industry willingness to meet the challenges posed by it Divided into four main sections it investigates the tourism and global environmental change relationship in specific environments global issues related to environmental change differing perceptions of global environmental change held by tourists and the tourist industry Comprehensive in scope topical and integrative this key text is essential reading for students scholars and researchers in all aspects of tourism geography and environmental studies Human Dimensions of Global Environmental Change National Research Council,Division of Behavioral and Social Sciences and Education,Policy Division,Board on Environmental Change and Society,Committee on the Human Dimensions of Global Change and Committee on Global Change Research,1999-07-29 This publication is extracted from a much larger report Global Environmental Change Research Pathways for the Next Decade which addresses the full range of the scientific issues concerning global environmental change and offers guidance to the scientific effort on these issues in the United States This volume consists of Chapter 7 of that report Human Dimensions of Global Environmental Change which was written for the report by the Committee on the Human Dimensions of Global Change of the National Research Council NRC It provides findings and conclusions on the key scientific questions in human dimensions research the lessons that have been learned over the past decade and the research imperatives for global change research funded from the United States **Facing Global Environmental Change** Hans Günter Brauch,Navnita Chadha Behera,Patricia Kameri-Mbote,John Grin,Úrsula Oswald Spring,Béchir Chourou,Czeslaw Mesjasz,Heinz Krummenacher,2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth sessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on c mate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly

drawn the link between climate change and peace in the world **Extreme Environmental Change and Evolution** Ary A. Hoffmann, Peter A. Parsons, 1997-07-10 Most natural populations intermittently experience extremely stressful conditions This book discusses how such conditions can cause periods of intense selection increasing both phenotypic and genetic variation and allowing organisms with novel characteristics to be first generated and then established in the population The authors argue that stressful conditions can have a major impact on the environment backing up their arguments with evidence from the fossil record They suggest further that as a consequence periods of stress must be taken into consideration when long term conservation strategies are planned particularly as stressful conditions are becoming increasingly prevalent as a result of human activities This broad overview will be of great interest to students and researchers in the field of evolutionary biology genetics ecology palaeontology and conservation biology Environment and Human Well-being Don Melnick, 2005 Climate Change 2014 - Impacts, Adaptation and Vulnerability: Global and Sectoral Aspects Christopher B. Field, Vicente R. Barros, 2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy *Responding to Climate Change* Paul Burton, 2014-11-05 South East Queensland has been one of the fastest growing regions of Australia both in terms of its rapidly growing population and an ever expanding built environment It is also one of the most vulnerable regions likely to suffer from the adverse impacts of climate change especially increased flooding storms coastal erosion and drought Responding to Climate Change Lessons from an Australian Hotspot brings together the results of cutting edge research from members of the Griffith Climate Change Response Program showing how best to respond to anticipated changes and how to overcome barriers to adaptation The authors treat climate change adaptation as a cross cutting multi level governance policy challenge extending across human settlements infrastructure ecosystems water management primary industries emergency management and human health The research focuses on but is not limited to the experience of climate change adaptation in the recognised climate hotspot of South East Queensland The results of this research will be of interest to planners policy makers and other practitioners engaged in urban and environmental planning coastal management public health emergency management and physical infrastructure at the local regional and metropolitan government scales **The U.S. Climate Change Science Program** Climate Change Science Program (U.S.), 2003 **Effects of Climate Change on Birds** Anders Pape Møller, Wolfgang Fiedler, Peter Berthold, 2010-08-12 Climate change affects all living organisms it has done so in the past and will do so in the future However current climate change is exceptional both in terms of the rate of change and the impact of multiple types of global change on individuals populations species and ecosystems Effects of Climate Change on Birds provides an exhaustive and up to date synthesis of the science of climate change as it relates to birds Compared with any other class of animals birds

provide more long term data and extensive time series some dating back more than 100 years a more geographically and taxonomically diverse source of information and a longer tradition of extensive research In fact this research record exceeds what is available in all other organisms combined Avoiding Dangerous Climate Change Wolfgang P. Cramer,2006-02-02 This volume first published in 2006 presents findings on climate change from leading international scientists for researchers policy makers and engineers **Adapting to the Impacts of Climate Change** National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,America's Climate Choices: Panel on Adapting to the Impacts of Climate Change,2011-01-06 Across the United States impacts of climate change are already evident Heat waves have become more frequent and intense cold extremes have become less frequent and patterns of rainfall are likely changing The proportion of precipitation that falls as rain rather than snow has increased across the western United States and Arctic sea ice has been reduced significantly Sea level has been rising faster than at any time in recent history threatening the natural and built environments on the coasts Even if emissions of greenhouse gases were substantially reduced now climate change and its resulting impacts would continue for some time to come To date decisions related to the management and protection of the nation s people resources and infrastructure have been based on records in the recent past when climate was relatively stable Adapting to the Impacts of Climate Change part of the congressionally requested America s Climate Choices suite of studies calls for a new paradigm one that considers a range of possible future climate conditions and impacts that may be well outside the realm of past experience Adaptation requires actions from many decision makers in federal state tribal and local governments the private sector non governmental organizations and community groups However current efforts are hampered by a lack of solid information about the benefits costs and effectiveness of various adaptation options climate information on regional and local scales and a lack of coordination Adapting to the Impacts of Climate Change calls for a national adaptation strategy that provides needed technical and scientific resources incentives to begin adaptation planning guidance across jurisdictions shared lessons learned and support of scientific research to expand knowledge of impacts and adaptation
