Implications for Population Migration Jon D. Unruh, Maarten Krol, N. Kliot, 2008-01-18 This volume provides an ample overview of state of the art understanding of the multi dimensional phenomenon of migration in the characterisation of migration drivers in environmental and agro economic case studies and modelling issues as well as socio political analyses The analysis is geared to the consequences of climatic change and the effects on soil water and extreme weather that will drive populations to migrate Environment, Forced Migration and Social Vulnerability Tamer Afifi, Jill Jäger, 2010-08-05

This book is one of the outputs of the conference on Environmental Change Forced Migration and Social Vulnerability EFMSV held in Bonn in October 2008 Migration is one of the oldest adaptation measures of humanity Indeed without migration the multitude of civilizations and interactions between them peaceful and otherwise would be hard to imagine The United Nations UN led global dialogue on migration is a clear sign that governments and the specialized UN agencies and bodies have recognized the need to view govern manage and facilitate migration to mitigate its negative effects and to capitalize on the positive ones It is a common expectation among experts that environmentally induced migration will further increase in the decades to come Hence next to the political economic ethnic social financial humanitarian and security aspects of migration the environmental component should urgently be considered in the ongoing international dialogue on migration This need is also a challenge Without appropriate scientific knowledge assessment definitions and classifications the intergovernmental frameworks would not be able to deal with these complex phenomena The Five Pronged Approach as formulated by the United Nations University UNU may serve as a framework to identify the additional dimensions of this challenge next to and actually simultaneously with the scientific one **Migration and Environmental Change in the**

West African Sahel Victoria van der Land, 2017-10-12 The West African Sahel is predicted to be heavily affected by climate change in the future Slow onset environmental changes such as increasing rainfall variability and rising temperature are presumed to worsen the livelihood conditions and to increase the out migration from the affected regions Based on qualitative and quantitative data from study areas in Mali and Senegal this book examines the relationship between population dynamics livelihoods and environment in the Sahel region focussing specifically on motives for migration Critiquing the assumption that environmental stress is the dominating migration driver the author demonstrates the important role of individual aspirations and social processes such as educational opportunities and the pull of urban lifestyles

In doing so the book provides a more nuanced picture of the environment migration nexus arguing that slow onset environmental changes may actually be less important as drivers of migration in the Sahel than they are often depicted in the media and climate change literature This is a valuable resource for academics and students of environmental sociology migration and development studies

The Atlas of Environmental Migration Dina Ionesco,Daria Mokhnacheva,François Gemenne,2016-11-25 As climate change and extreme weather events increasingly threaten traditional landscapes and livelihoods of entire communities the need to study its impact on human migration and population displacement has never been greater The Atlas of Environmental Migration is the first illustrated publication mapping this complex phenomenon It clarifies terminology and concepts draws a typology of migration related to environment and climate change describes the multiple factors at play explains the challenges and highlights the opportunities related to this phenomenon Through elaborate maps diagrams illustrations case studies from all over the world based on the most updated international research findings the Atlas guides the reader from the roots of environmental migration through to governance In addition to the primary audience of students and scholars of environment studies climate change geography and migration it will also be of interest to researchers and students in politics economics and international relations departments

Climate Change Adaptation and Social Resilience in the Sundarbans Anna O'Donnell,Quentin Wodon,2015-03-24 Household vulnerability to weather shocks and changing climatic conditions has become a major concern in developing countries Yet the empirical evidence remains limited on the impact that changing environmental conditions have on households This book explores climate change adaptation using a social resilience approach The book is based on primary data from the Sundarbans a densely populated area located across parts of Bangladesh and India West Bengal which is highly vulnerable to extreme weather events and climate change The focus is on assessing how households are affected by cyclones whether they are able to cope with adapt to and recover from events and changes whether they are warned ahead of time whether they benefit from government safety nets and other social programs and finally whether they are driven to either temporary or permanent migration This assessment leads to a better understanding of how exposure to an area of climate change vulnerability and risk affects and shapes human responses

Social Dimensions of Climate Change Robin Mearns,Andrew Norton,2009-12-02 While major strides have been made in the scientific understanding of climate change much less understood is how these dynamics in the physical environment interact with socioeconomic systems This book brings together the latest knowledge on the consequences of climate change for society and how best to address them

Climate Neutrality and Sustainable Ecosystems Rubee Singh, David Crowther, 2025-09-11 This book is an essential contribution to the growing discourse on climate change sustainability and global warming. It explores the complex challenges of climate change and provides actionable strategies for achieving climate neutrality, emphasizing the balance between economic growth and ecosystem preservation. Highlighting the critical role of government leadership and policy integration, the book explores how collaboration across stakeholders i.e. governments, private sectors, civil society, and international organizations can drive sustainable frameworks. It provides examples of forward thinking policies and initiatives that have successfully reduced carbon emissions and promoted green technologies worldwide. A significant focus is placed on the interconnectedness of human activity and ecosystems, addressing the delicate balance of ocean health, migration patterns, and economic systems. The book also explores the unique challenges faced by developing nations, emphasizing the need for adaptive strategies to ensure food security, growth, and resilience to extreme weather events. With sector-specific insights, the book highlights how industries like energy, transport, and tourism can adopt sustainable practices, leveraging technology and human capital to transition to a low-carbon future. Additionally, it examines the role of climate finance in supporting this transition, showcasing tools like green bonds, carbon pricing, and international funds. Featuring real-world examples and case studies, the book offers a practical guide for policymakers, businesses, and practitioners, providing a roadmap for scalable and innovative climate solutions. It is a must-read for anyone dedicated to fostering a sustainable and climate-resilient future.

Environmental Deterioration and Human Health Abdul Malik, Elisabeth Grohmann, Rais Akhtar, 2013-12-11 This book discusses the natural and anthropogenic determinants of the environment and their impact on human health. It throws light on the perspectives of climate change with case studies from Australia, India, Italy, and Latin America. Themes covered are ecology of antibiotic-resistant microorganisms, pesticide and heavy metal arsenic problems in natural environment, molecular advances in understanding of microbial interactions, ecological studies of human/animal health and diseases, food security, technological developments, and more. The various chapters incorporate both theoretical and applied aspects and may serve as baseline information for future research through which significant development is possible.

Climate Change and Displacement Jane McAdam, 2010-09-06 Environmental migration is not new. Nevertheless, the events and processes accompanying global climate change threaten to increase human movement both within states and across international borders. The Intergovernmental Panel on Climate Change has predicted an increased frequency and severity of climate events such as storms, cyclones, and hurricanes, as well as longer-term sea level rise and desertification, which will impact upon people's ability to survive in certain parts of the world. This book brings together a variety of disciplinary perspectives on the phenomenon of climate-induced displacement. With chapters by leading scholars in their field, it collects in one place a rigorous holistic analysis of the phenomenon, which can better inform academic understanding and policy development alike.

Governments have not been prepared to take a leading role in developing responses to the issue in large part due to the absence of strong theoretical frameworks from which sound policy can be constructed. The specialist expertise of the authors in this book means that each chapter identifies key issues that need to be considered in shaping domestic regional and international responses including the complex causes of movement, the conceptualisation of migration responses to climate change, the terminology that should be used to describe those who move and attitudes to migration that may affect decisions to stay or leave. The book will help to facilitate the creation of principled research based responses and establish climate induced displacement as an important aspect of both the climate change and global migration debates. **Sustainability**

and Peaceful Coexistence for the Anthropocene Pasi Heikkurinen, 2017-08-17. The rapid industrialization of societies has resulted in radical changes to the Earth's biosphere and its local ecosystems. Climate scientists have recorded and forecasted worrying global temperature rises going back to the early twentieth century while biologists and palaeontologists have suggested that the next mass extinction is on its way if the current rate of species loss continues. To avert further ecological damage, excessive natural resource use and environmental deterioration are challenges that humanity must deal with now. The human species has had such a significant impact on the natural environment that the present geological epoch can be referred to as the Anthropocene, the age of humans. The blame and responsibility for the prevailing unsustainability, however, cannot be assigned equally to all humans. To analyse the root problems and consequences of unsustainable development as well as to outline rigorous solutions for the contemporary age, this transdisciplinary book brings together natural and social sciences under the rubric of the Anthropocene. The book identifies the central preconditions for social organization and governance to enable the peaceful coexistence of humans and the non-human world. The contributors investigate the burning questions of sustainability from a number of different perspectives including geosciences, economics, law, organizational studies, political theory and philosophy. The book is a state of the art review of the Anthropocene debate and provides crucial signposts for how human activities can and should be changed. *The Anthropocene and the Global Environmental Crisis*

Clive Hamilton, François Gemenne, Christophe Bonneuil, 2015-05-15. The Anthropocene, in which humankind has become a geological force, is a major scientific proposal but it also means that the conceptions of the natural and social worlds on which sociology, political science, history, law, economics and philosophy rest are called into question. *The Anthropocene and the Global Environmental Crisis* captures some of the radical new thinking prompted by the arrival of the Anthropocene and opens up the social sciences and humanities to the profound meaning of the new geological epoch, the Age of Humans. Drawing on the expertise of world recognised scholars and thought provoking intellectuals, the book explores the challenges and difficult questions posed by the convergence of geological and human history to the foundational ideas of modern social science. If in the Anthropocene humans have become a force of nature changing the functioning of the Earth system as volcanism and glacial cycles do, then it means the end of the idea of nature as no more than the inert backdrop to the drama.

of human affairs It means the end of the social only understanding of human history and agency These pillars of modernity are now destabilised The scale and pace of the shifts occurring on Earth are beyond human experience and expose the anachronisms of Holocene thinking The book explores what kinds of narratives are emerging around the scientific idea of the new geological epoch and what it means for the politics of unsustainability

Climate Change, Human Security and Violent Conflict Jürgen Scheffran, Michael Brzoska, Hans Günter Brauch, Peter Michael Link, Janpeter Schilling, 2012-05-26 Severe droughts damaging floods and mass migration Climate change is becoming a focal point for security and conflict research and a challenge for the world's governance structures But how severe are the security risks and conflict potentials of climate change Could global warming trigger a sequence of events leading to economic decline social unrest and political instability What are the causal relationships between resource scarcity and violent conflict This book brings together international experts to explore these questions using in depth case studies from around the world Furthermore the authors discuss strategies institutions and cooperative approaches to stabilize the climate society interaction

The Role of Tropics in Climate Change Neloy Khare, 2023-11-28 The Role of Tropics in Climate Change Global Case Studies uses a 20 chapter easy to understand format to centralize the practical application ideas for functional metagenomics This important resource not only includes chapters on next generation sequencing technologies to study important biogeochemical cycles degradation pathways and detoxification but also gives insight into several tools that have been developed to integrate metadata and sequence data allowing downstream comparative analyses of different datasets using several ecological indices The book further explains newly developed techniques for sequencing DNA generating shorter fragments than Sanger sequencing techniques to quickly read larger sequences in a shorter amount of time Provides a wealth of information to readers on state of the art applications of metagenomics Summarizes our current knowledge of the use of metagenomics and gives a novel and powerful insight into the already existing bioremediation process Gives an overall picture of metagenomics and its application processes and future prospects in the field of bioremediation

Integrating Ecology and Poverty Reduction Jane Carter Ingram, Fabrice DeClerck, Cristina Rumbaitis del Rio, 2011-11-25 The second volume of this series Integrating Ecology into Global Poverty Reduction Efforts Opportunities and solutions builds upon the first volume Integrating Ecology into Global Poverty Reduction Efforts The ecological dimensions to poverty by exploring the way in which ecological science and tools can be applied to address major development challenges associated with rural poverty In volume 2 we explore how ecological principles and practices can be integrated conceptually and practically into social economic and political norms and processes to positively influence poverty and the environment upon which humans depend Specifically these chapters explore how ecological science approaches and considerations can be leveraged to enhance the positive impacts of education gender relations demographics markets and governance on poverty reduction As the final chapter on The future and evolving role of ecological science points out sustainable development must be build upon an

ecological foundation if it is to be realized The chapters in this volume illustrate how traditional paradigms and forces guiding development can be steered along more sustainable trajectories by utilizing ecological science to inform project planning policy development market development and decision making

Migration and Development Savina Ammassari, 2012-11-16 This book focuses on international migration and return of highly skilled Ghanaians and Ivorians and presents empirical research findings that demonstrate that under certain circumstances return migrants can act as key development agents in their home country It investigates the influence of a number of factors that condition their motivation to return and their capacity to stimulate change in their countries of origin The aim of the study is the assessment of policy implications related to lite returnees development impact in evolving socio economic contexts The comparative and multi method research strategy adopted revealed that migrants tend to return home with considerable savings financial capital new knowledge skills and ideas human capital as well as with valuable contacts social capital Besides their level of education work profile and particular life experience whether these migrants have worked abroad for a significant period proved the most critical factor influencing their acquisition of different kinds of capital However there seems to be an optimum work duration abroad approximately five years after which the benefits deriving from human and financial capital acquisition tend to stabilise At the micro level back home skilled migrants attained their goals improving their relative income levels expressing satisfaction with their work conditions and more generally enjoying a higher quality of life At the meso level they provided support to others in line with expectations and pressures they faced They also introduced many kinds of new knowledge skills and ideas in their workplace At the macro level return migrants promoted economic and political transformations through among others the creation of new businesses and various community development initiatives The role of return migrants is influenced by many factors linked also to their situation back home Reintegration into their home context proved challenging especially for women and returning migrants need time to overcome initial hurdles and get settled before they can start to make any meaningful contribution That is one of the reasons why there is a need to facilitate their reintegration and create a conducive environment which can also foster return migration of the highly skilled lite More importantly however evidence is produced in favour of arguments and ideas about brain circulation a strategy that can help in maximising the positive effects stemming from migration and return
