## **Environmental Destruction:**

The Social Causes of Environmental Destruction in Latin America Michael Painter, William H. Durham, 1995 An important and timely study of environmental degradation in Central and South America     Ideology, Social Theory, and the Environment William D. Sunderlin, 2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity     *Understanding Environmental Pollution* Marquita K. Hill, 2010-04-22 The third edition of this well received textbook delivers a concise overview of global and individual environmental pollution for undergraduate courses presenting students with the tools to assess environmental issues With more than thirty percent new material Hill assesses pollution from an international perspective including air and water pollution global warming energy solid and hazardous waste and pollution at home Both the sources and impacts of pollution are addressed as well as governmental corporate and personal responsibility for pollution and pollution prevention is emphasized throughout Non technical language encourages greater understanding of these often complex issues and thought provoking Delving Deeper exercises are included increasing engagement with the text and enabling students to apply what they have learned A new chapter on the chemistry basics of pollution links to sections on toxicology and risk assessment helping students understand concerns over chemicals and their regulation An essential review of environmental pollution for environmental science students     **Dubya** Donald Lord, 2005-08 The United States is suffering from dangerous smog dirty water and other unhealthy environmental hazards However only a handful of us are aware that each year tens of thousands of Americans die prematurely from environmental causes Much of this death and destruction is caused by the deceit of our own government The federal government which is supposed to protect the environment is doing the opposite and getting away with it Justifiably the world is focusing on the threat of terrorism but much of the world is also focusing on an equally dangerous threat environmental destruction It may be true that thousands have perished in terrorist attacks but the fact is that millions worldwide die from environmental causes every year Air

pollution unsafe water and other environmental hazards are killing more people now than ever before and the costs of global warming will increase that number dramatically Many nations are already fighting this war especially in Europe but the United States has not yet joined the battle Author Don Lord PhD charges that it is the responsibility of the United States government to protect all its citizens Until those in government positions work together to stop pollution citizens of the United States will remain at great risk
