Environmental Policy Between Regulation and Market C. Jeanrenaud, 2013-03-07 Environmental policies have traditionally relied on direct controls and on government investment to protect natural resources Today the drawbacks and impediments to this approach are evident heavy burdens borne by companies and the community complex regulations a danger of legislative inflation difficulties in meeting the goals set to name a few In response the environmental authorities in many countries have begun to reassess the efficacy of their programs with the result that market incentives and voluntary agreements with companies or branches of industry have been added to the arsenal of traditional environmental protection measures There are great expectations for new economic instruments which offer the twofold advantage of giving companies more freedom in the choice of means and of increasing the chances for meeting goals in a more cost effective way The authors of this book analyse these instruments green taxes tradeable permits covenants joint implementation internationally tradeable quotas from the point of view of cost effectiveness their ability to achieve environmental goals and public and corporate acceptability They endeavour to determine on the basis of experience to date whether these instruments are living up to the hopes placed in them Environmental Policy Between Regulation and Market C. **Environmental Policy Between Regulation and Market** Claude Jeanrenaud, 1997-01-01 Moving to Markets in Environmental Regulation Jody Freeman, Charles D. Kolstad, 2007 Publisher description **China's Way to Carbon**

**Emissions Reduction** Ying Shen, 2015-08-18 Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China's current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories legal challenges from China's current administrative legislation and the definition of carbon emissions entitlements practical effect of China's climate change policy at the national provincial and local levels effectiveness of China's implementation of its international obligations lessons

learned from schemes implemented in the United States and Australia comparison of China's seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

*Environmental Regulation Through Financial Organisations: Comparative Perspectives on the Industrialised Nations* Benjamin Richardson, 2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance

**Moving to Markets in Environmental Regulation** Jody Freeman, Charles D. Kolstad, 2006-11-30 Over the last decade market based incentives have become the regulatory tool of choice when trying to solve difficult environmental problems Evidence of their dominance can be seen in recent proposals for addressing global warming through an emissions trading scheme in the Kyoto Protocol and for amending the Clean Air Act to add a new emissions trading system for smog precursors and mercury the Bush administration's Clear Skies program They are widely viewed as more efficient than traditional command and control regulation This collection of essays takes a critical look at this question and evaluates whether the promises of market based regulation have been fulfilled Contributors put forth the ideas that few regulatory instruments are actually purely market

based or purely prescriptive and that both approaches can be systematically undermined by insufficiently careful design and by failures of monitoring and enforcement All in all the essays recommend future research that no longer pits one kind of approach against the other but instead examines their interaction and compatibility This book should appeal to academics in environmental economics and law along with policymakers in government agencies and advocates in non governmental organizations

**Innovations and the Environment** Yoram Krozer, 2008-05-06 This book Innovations and the Environment aims to review the state of knowledge and to provide an empirical basis for the development and use of new technologies products and services to reduce the impact of human activities on environmental quality This is at the core of the debate on economics and the environment The message is optimistic Advances in thinking and actions make it possible to maintain high environmental quality at reasonable costs sometimes even having a positive

effect on corporate results The progress is by no means automatic Risk taking by entrepreneurs managers and policy makers is necessary The idea to write a book about innovations and the environment was born during discussions with Professor Han Brezet who was convinced of the importance of this subject for engineering students This is because he has found many stories about the successes and failures of environmental technologies and even more on the impact of technologies on environmental qualities but no reviews on technology and the mindset of entrepreneurship to explain the forces that drive innovations for sustainable development *Green indicators to inform circular economy under climate change* Muhlis Can,Bodo Sturm,Jan Brusselaers,2023-03-08
