Abstract. The commercial sector of most industrialised economy accounts for a significant percentage of the total environmental pollution (EP) that we experience today. Recent advancements in EP research have therefore provided environmental regulators and health scientists with a wide array of solution techniques. Unfortunately, the EP literature has lagged behind in providing an up-to-date integrated stream of research that could be useful for new entrants and experienced researchers. The objective of the paper is to present a comprehensive review of EP research. The principal motivating factor is the deficiency of informative articles that reveal the length, breadth and depth of scientific investigations in the area. The study extends to a general survey, models, empirical studies and cases that have extended the frontier of knowledge in EP research. Our aim is to stimulate further empirical and theoretical developments in the EP area. A second intent is to argue that research into EP provides great potentials for increasing our knowledge regarding environmental management. The future holds promising results for researchers and practitioners engaged in EP research. Future studies are expected to save billions of dollars through development of novel cost-effective methods.

Keywords: environmental pollution, water, air, soil.

1. Introduction

The EP Literature has a long and distinguished history. The primary incentive for the high interests in EP problems is the need for improvement and realisation for a sustainable development in the environment. Recently, research on EP is gaining an increasing attention of professionals, scholars, and governments. The notable stakeholders in EP research are engineers, chemists, physicists, meteorologists, epidemiologists, lawyers, economists, sociologists, agronomists, and toxicologists, among others. Today, EP presents a big problem, a challenge, and a matter of deep interest and concern to citizenry, governments, and professionals. Consequently, governments in many countries worldwide have increased their devotion and currently making efforts in strengthening the prevention of EP. Environmental pollution threatens the safety of people's lives and wealth, and brings interrelated social problems. Thus, this has led to a huge investment of human intelligence and capital resources in the management and control of EP problems.

EP problems evolved in the 20th century as a result of rapid economic development that was generated by the production activity in the manufacturing sector, giv-

ing damage to the productivity of other sectors, including the agricultural sector. The literature defines EP as an unfavourable alteration of our surroundings through direct or indirect effect, resulting in changes in energy patterns, radiation levels, chemical and physical constitution of our environment, and abundance of organisms. These changes may affect humans directly or through their supplies of water, agricultural, and other biological products.

Most countries of the world that previously have had wonderful and untouched nature are now occupied with motor ways, sky scrappers, nuclear power stations, and smoking industrial plants. A number of irresponsible humans also destroy the natural ecosystem for their own profit. Unfortunately, today, this irreversible destruction of the base of existence is still being carried on with a fast speed. Another concern is the greenhouse effect caused by the release of carbon dioxide to the environment. In China, for example, the signing of the UN climate change framework treaty indicates recognition of the need to control the exhaust of greenhouse gases, such as carbon dioxide. The world is also committing itself to action to reducing pollution associated with energy use, including reduction of carbon dioxide.
