Environment and Politics Timothy Doyle, Doug McEachern, Sherilyn MacGregor, 2015-08-27. Environment and Politics 4th Edition is a concise introduction to this ever-expanding interdisciplinary field, explaining and illustrating how concepts, conflicts, movements, political systems and the practices of policy making can be analysed in a systematic way. This book provides a comprehensive overview of the key themes that shape the field and examines a diverse range of environmental problems and policy solutions found in different countries and cultures. The new edition has been extensively revised to include up-to-date explanation of green political theories and traditions and the debates that shape action on the ground. It contains an expanded discussion of environmental movements that work in the Global North, the Global South and transnationally. Greater attention has been given to the roles of corporations, non-governmental organizations, the media, consumers and citizens in order to reflect the changing nature of environmental governance. This engaging text has been fully updated to offer readers a greater understanding of international, national and local environmental politics as well as expected future developments at all levels. Environment and Politics continues to use illustrative examples of conflicts, people and events spanning North and South America, Europe, Asia, Africa and Australia, giving it global perspective and relevance. Each chapter includes questions for debate as well as a list of key words and resources for independent research. This successful textbook remains a key resource for undergraduate and postgraduate studies across politics, environmental studies, development studies and human geography courses.

Human Impact on Ancient Environments Charles L. Redman, 1999-10-01 Threats to biodiversity food shortages urban sprawl lessons for environmental problems that confront us today may well be found in the past The archaeological record contains hundreds of situations in which societies developed long term sustainable relationships with their environments and thousands in which the relationships were destructive Charles Redman demonstrates that much can be learned from an improved understanding of peoples who through seemingly rational decisions degraded their environments and threatened their own survival By

discussing archaeological case studies from around the world from the deforestation of the Mayan lowlands to soil erosion in ancient Greece to the almost total depletion of resources on Easter Island Redman reveals the long range coevolution of culture and environment and clearly shows the impact that ancient peoples had on their world These case studies focus on four themes habitat transformation and animal extinctions agricultural practices urban growth and the forces that accompany complex society They show that humankind s commitment to agriculture has had cultural consequences that have conditioned our perception of the environment and reveal that societies before European contact did not necessarily live the utopian existences that have been popularly supposed Whereas most books on this topic tend to treat human societies as mere reactors to environmental stimuli Redman s volume shows them to be active participants in complex and evolving ecological relationships Human Impact on Ancient Environments demonstrates how archaeological research can provide unique insights into the nature of human stewardship of the Earth and can permanently alter the way we think about humans and the environment
