Wu, 1990 Environmental tobacco smoke ETS is a controversial subject of current concern to governments health scientists other professionals and the general public These discussions review the published studies and address the problems of ETS characterization and health effects including cancer reproductive effects cardiovascular disease and respiratory effects Annotation copyrighted by Book News Inc Portland OR Hyping Health Risks Geoffrey C. Kabat, 2008-07-03 The media constantly bombard us with news of health hazards lurking in our everyday lives but many of these hazards turn out to have been greatly overblown According to author and epidemiologist Geoffrey C Kabat this hyping of low level environmental hazards leads to needless anxiety and confusion on the part of the public concerning which exposures have important effects on health and which are likely to have minimal or no effect Kabat approaches health scares as social facts and shows that a variety of factors can contribute to the inflating of a hazard These include skewed reporting by the media but also surprisingly the actions of researchers who may emphasize certain findings while ignoring others regulatory and health agencies eager to show their responsiveness to the health concerns of the public and politicians and advocates with a stake in a particular outcome By means of four case studies Kabat demonstrates how a powerful confluence of interests can lead to overstating or distorting the scientific evidence He considers the health risks of pollutants such as DDT as a cause of breast cancer electromagnetic fields from power lines radon within residences and secondhand tobacco smoke Tracing the trajectory of each of these hazards from its initial emergence to the present Kabat shows how publication of more rigorous studies and critical assessments ultimately help put hazards in perspective

Living to 100 and Beyond Timothy Harris, 2009 Designed to build upon recent Symposia on the same topic Living to 100 and Beyond explores the research that has focused on increasing life expectancies and the lifestyles of longer lived individuals It provides a basic understanding of the actuarial mathematics associated with life expectancies their calculation and their projection It also highlights the important issues facing society as populations age The book also provides a discussion of a host of products targeted for the aged It can thus serve as a reference source for anyone who is impacted by any aspect of this fascinating topic It concludes with an extensive bibliography for those who would like additional information Health Effects of Exposure to Environmental Tobacco Smoke CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY, 1997 *Respiratory Health Effects of Passive Smoking* U.S. Environmental Protection Agency, Office of Health and Environmental Assessment, Office of Development, 2014-05-22 An estimated 434 000 deaths per year in the U S or more than one of every six deaths are attributable to tobacco use in particular cigarette smoking CDC 1991a figures for 1988 Approximately 112 000 of these smoking related deaths are from lung cancer accounting for an estimated 87% of U S lung cancer mortality Cigarette smoking is also causally related to cancer at various other sites such as the bladder renal pelvis pancreas and upper respiratory and digestive tracts Roughly 30 000 deaths per year from cancers at these sites are

attributable to smoking Furthermore smoking is the major cause of chronic obstructive pulmonary disease COPD which includes emphysema and is thought to be responsible for approximately 61 000 COPD deaths yearly or about 82% of COPD deaths Tobacco use is also a major risk factor for cardiovascular diseases the leading cause of death in the U S It is estimated that each year 156 000 heart disease deaths and 26 000 deaths from stroke are attributable to smoking In addition to this substantial mortality the association of smoking with these conditions also involves significant morbidity Smoking also is a risk factor for various respiratory infections such as influenza bronchitis and pneumonia An estimated 20 000 influenza and pneumonia deaths per year are attributable to smoking Smokers also suffer from lung function impairment and numerous other respiratory symptoms such as cough phlegm production wheezing and shortness of breath In addition smokers are at increased risk for a variety of other conditions including pregnancy complications and ulcers Although the exact mechanisms and tobacco smoke components associated with these health effects are not known with certainty more than 40 known or suspected human carcinogens have been identified in tobacco smoke Many other toxic agents such as carbon monoxide nitrogen oxides ammonia and hydrogen cyanide are also found in tobacco smoke Smokers however are not the only ones at risk from exposure to these tobacco smoke toxicants In utero exposure from maternal smoking during pregnancy is known to be associated with low birth weight and increased risk of fetal and infant death Furthermore nonsmokers might be at risk for smoking associated health effects from passive smoking or exposure to environmental tobacco smoke ETS When a cigarette is smoked approximately one half of the smoke generated is sidestream smoke SS emitted from the smoldering cigarette between puffs This SS contains essentially all of the same carcinogenic and toxic agents that have been identified in the mainstream smoke MS inhaled by the smoker SS and exhaled MS are the major components of ETS Environmental monitoring and measurements of biomarkers for ETS in the biological fluids of nonsmokers demonstrate that ETS constituents can be found at elevated levels in indoor environments where smoking occurs and that these constituents are inhaled and absorbed by nonsmokers Twenty six percent of the U S adult population or about 50 million Americans are smokers and so virtually all Americans are likely to be exposed to some amount of ETS in the home at work or in public places Measurements of biomarkers for ETS in nonsmokers confirm that nearly all Americans are exposed to ETS In view of the high levels of mortality and morbidity associated with smoking the chemical similarity between ETS and MS and the considerable likelihood for exposure of nonsmokers to ETS passive smoking is potentially a substantial public health concern The objectives of this report are to assess the risk to nonsmokers for respiratory health effects from exposure to ETS hazard identification and to estimate the population impact quantitative population risk assessment of any such ETS attributable respiratory effects
