

Sedimentary Structure	Description	Required conditions	
Ripple Marks	Either symmetrical or asymmetrical ripples present on bedding surfaces.	Water or air currents. Asymmetrical ripples indicate unidirectional currents with the steep slope facing down current and the shallow slope facing up current. Symmetrical ripples indicate bidirectional currents.	
Cross-bedding	Layers of inclined beds often altering directions from bed to bed.	Water or air currents.	
Graded Beds	Beds of sedimentary rocks with a change in sediment size through the layer with smaller grains at the top of the bed and larger grains on the bottom.	A turbulent water current carrying sediment loses energy and slows.	
Raindrop impressions	Small indentations on a bedding plane from the impact of raindrops.	Soft muddy substrate that is exposed and subsequently buried with sediment.	
Mudcrack casts	Muddy cast infills of a polygonal pattern of cracks formed in mud as it dries.	Alternating wet and dry conditions create cracks in mud, which are then buried by sediment and preserved.	
Trace fossils	Tracks, burrows, or other traces left by the activity of plants or animals.	The presence of animals or plants. These traces occur where the organism lives and more specific information can be obtained based on the identity of the tracemaker.
