

THE ENRICHMENT TRIAD MODEL: A GUIDE FOR DEVELOPING DEFENSIBLE PROGRAMS FOR THE GIFTED AND TALENTED

Joseph S. Renzulli, Director
Teaching the Talented Program
University of Connecticut

INTRODUCTION

The purpose of this paper is threefold. First, I would like to register some concerns about the appropriateness of many activities that parade under the banner of gifted education, activities that may be intrinsically valuable in and of themselves, but essentially indefensible as the mainstay of programs that serve gifted and talented students. The second purpose will be to present an enrichment model that can be used as a guide in the development of qualitatively different programs in this area of special education, and by so doing try to provide defensible answers to questions such as:

What is (or should be) different about the types of learning experiences that are advocated for gifted students?

Isn't what you are doing for the gifted also good for nearly all youngsters?

Unless we can provide satisfactory answers to these questions, programs that serve superior students will be extremely vulnerable to both the critics of gifted education and to persons who may be sympathetic with this area, but who also feel that special services for gifted and talented youngsters are essentially a luxury item that schools can easily get by without. But more importantly, answers are necessary for persons within the field, the true believers in special education for the gifted who occasionally experience pangs of conscience because they can defend programs philosophically but not programmatically or in terms of the day-to-day experiences that are provided for gifted youngsters. Another aspect of my concern about defensibility deals with the magic word, individualization, which is being offered by many people as a panacea for meeting the needs of gifted and talented students. Although individualized learning is an important goal for all youngsters, many educators have misinterpreted both the meaning and process of individualization
