COTS-Based Software Systems John Dean,Andree Gravel,2003-06-30 Modernsoftwaresystemsincreasinglyusecommercial o the shelf COTS so ware products as building blocks In some cases major software systems are assembled with virtually no custom code in the system The use of COTS software products as

components offers the promise of rapid delivery to end users shared development costs with other customers and an opportunity for expanding mission or business capabilities and performance as improvements are made in the commercial marketplace Few organizations today can afford the resources and time to replicate market tested capabilities Yet the promise of COTS products is too often not realized in practice There have been more failures than successes in using COTS software products The research and software practitioner communities have been working with COTS based software systems for a number of years There is now sufficient documented experience in the community to collect analyze and disseminate success stories common failings lessons learned and research advances The mounting experience shows that the effective use of COTS software products in major software systems demands new skills knowledge and abilities changed roles and responsibilities and different techniques and processes The International Conference on COTS Based Software Systems ICCBSS focuses on the challenges of building and maintaining systems that incorporate COTS software products The conference sponsors the National Research Council Canada the Software Engineering Institute and the University of Southern California Center for Software Engineering aim to bring together managers developers maintainers and researchers to share their expertise and experience

Mastering XMI Timothy J. Grose, Gary C. Doney, Stephen A. Brodsky, 2002-10-15 Create more powerful flexible applications using a new extension of the XML standard Programmers are finding that the XMI extension of the XML standard provides a lot more flexibility in writing software for sharing data Written by one of the principal authors of XMI this book provides programmers with everything they need to know to best utilize this extension The authors cover the basics first detailing the essential concepts and explaining how XMI relates to XML and UML Readers will then learn how to program with XMI including how to express data in XMI create XMI documents with Java and merge documents Samples of real world XMI applications are also included throughout the book that show how IBM is using XMI with data warehousing and how to convert simple relational databases into XMI CD ROM includes sample XMI source code and software tools for developing XMI and XML applications

Software Defined Radio Markus Dillinger,Kambiz Madani,Nancy Alonistioti,2005-08-05

Software defined radio SDR is a hot topic in the telecommunications field with regard to wireless technology It is one of the most important topics of research in the area of mobile and personal communications SDR is viewed as the enabler of global roaming and a platform for the introduction of new technologies and services into existing live networks It therefore gives networks a greater flexibility into mobile communications It bridges the inter disciplinary gap in the field as SDR covers two

areas of development namely software development and digital signal processing and the internet. It extends well beyond the simple re-configuration of air interface parameters to cover the whole system from the network to service creation and application development. Reconfigurability entails the pervasive use of software reconfiguration empowering upgrades or patching of any element of the network and of the services and applications running on it. It cuts across the types of bearer radio systems: Paging to cellular, wireless local area network to microwave, terrestrial to satellite, personal communications to broadcasting, enable the integration of many of today's disparate systems in the same hardware platform. Also, it cuts across generation: second to third to fourth. This volume complements the already published volumes 1 and 2 of the Wiley Series in Software Radio. The book discusses the requirements for reconfigurability and then introduces network architectures and functions for reconfigurable terminals. Finally, it deals with reconfiguration in the network. The book also provides a comprehensive view on reconfigurability in three very active research projects: CAST, MOBIVAS, and TRUST SCOUT. Key features include: Presents new research in wireless communications; Summarises the results of an extensive research program on software defined radios in Europe; Provides a comprehensive view on reconfigurability in three very active research projects: CAST, Configurable radio with Advanced Software Technology, MOBIVAS, Downloadable Mobile Value Added Services through Software Radio and Switching Integrated Platforms, TRUST, Transparently Reconfigurable Ubiquitous Terminal and SCOUT, Smart User Centric Communication Environment.

Cooperative Environments for Distributed Systems Engineering Khalil Drira, Andrea Martelli, Thierry Villemur, 2003-06-30. The engineering life cycle for complex systems design and development where partners are dispersed in different locations requires the set up of adequate and controlled processes involving many different disciplines. The design integration and the final system physical functional integration and qualification imply a high degree of cross interaction among the partners. The place technical information systems supporting the life cycle activities are specialized with respect to the needs of each actor in the process chain and are highly heterogeneous between them. To globally innovate in place processes, specialists must be able to work as a unique team in a virtual enterprise model. To this aim, it is necessary to make interoperable the different technical information systems and to define co-operative engineering processes which take into account distributed roles, shared activities, and distributed process controls. In this frame, an innovative study aimed at addressing this process with the goal of identifying proper solutions in terms of design, implementation, and deployment has been carried out with the support of the European Community and the participation of major industrial companies and research centers.

Understanding FOSS Version 4.0n , The Internet Challenge: Technology

and Applications Günter Hommel, Sheng Huanye, 2012-12-06 The International Workshop on The Internet Challenge Technology and Applications is the fifth in a successful series of workshops that were established by Shanghai Jiao Tong University and Technische Universität Berlin. The goal of those workshops is to bring together researchers from both universities in order to exchange research results achieved in common projects of the two partner universities or to present interesting new work that might lead to new cooperation. The series of workshops started in 1990 with the International Workshop on Artificial Intelligence and was continued with the International Workshop on Advanced Software Technology in 1994. Both workshops have been hosted by Shanghai Jiao Tong University. In 1998 the third workshop took place in Berlin. This International Workshop on Communication Based Systems was essentially based on results from the Graduiertenkolleg on Communication Based systems that was funded by the German Research Society DFG from 1991 to 2000. The fourth International Workshop on Robotics and its Applications was held in Shanghai in 2000 supported by VDI/VDE GMA and GI.

OOIS 2001 Xingxu Wang, Shushma Patel, Ronald Johnston, 2012-12-06 Welcome to OOIS 01 and Calgary. This is the 7th International Conference on Object Oriented Information Systems (OOIS) that focus on Object Oriented and Web Based Frameworks for Information Systems. In the last few years we've seen significant new development in this field from one off design technologies to reusable frameworks and from web applications to bioinformatic systems. We perceive that information processing is one of the most important activities of human beings. Object orientation and frameworks have been the main stream technologies for design and implementation of large scale and complex information systems. Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers. Users of information systems are increasingly demanding higher performance, mobility and personalization in order to realize the dream to access and obtain necessary information anywhere and anytime. The new development requires the investigation of new architectures, frameworks, processes and inter connectivity of information systems at society, organization, team and personal levels. The OOIS 01 Proceedings has put together a program of 53 papers from leading researchers and practitioners in the field of object technology and information systems.
