Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2006-03-09 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger

theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05 held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks

Practice of Enterprise Modeling Paul Johannesson, John Krogstie, Andreas L. Opdahl, 2011-10-13 This volume constitutes the proceedings of the 4th IFIP WG 8.1 Working Conference on the Practice of Enterprise Modeling held in Oslo Norway during November 2-3 2011. The conference series is a dedicated forum where the use of enterprise modeling EM in practice is addressed by bringing together researchers, users and practitioners in order to develop a better understanding of the practice of EM to contribute to improved industrial EM applications and to share knowledge and experiences. The 18 papers presented were carefully reviewed and selected from 38 submissions. Authored by both researchers and practitioners, they reflect the fact that EM encompasses human organizational issues as well as technical aspects related to the development of information systems. The papers are organized in five thematic sessions on process modeling, business modeling, enterprise architecture, EM and model driven development. In addition, two keynotes on EM in an agile world and on intra and inter organizational process mining complete the volume.

E-learning for architecture Stefano Panunzi, Rosalba Belibani, 2012-01-13 T00:00:00+01:00 Our research, even despite its apparent fragmentary appearance, firmly believes in the idea that information science tools and the On Line System should be utilized in innumerable ways in the various independent stages of an architect's learning itinerary, but that they can never totally replace the maieutic aspect of master-pupil relations, even if the masters, due to the extraordinary capacities of computer science, can be themselves multiplied, since even though distant in space, they can be visibly and audibly next to us in a shared environment, even interacting with our own designs. We ourselves are spectators with other students gathered from all over the world to share together the most precious and unique moments in our and their educational growth. Research into the most effective way of realising this Augmented Reality, as the Americans call it, is our most ambitious objective, along with a parallel investigation into all the other possible stages of teaching in which

information science technologies can be used as a normal and potent tool for the training of an architect Lucio Valerio Barbera Contributions Gustavo Ambrosini Roberta Ansuini Lucio Valerio Barbera Liliana Bazzanella Rosalba Belibani Michele Bonino Luca Caneparo Pierre Alain Croset Mario De Grassi Anna Irene Del Monaco Luca Fabbri Alberto Giretti Gianluigi Mondaini Stefano Panunzi Mario Petrone **E-collaborations and Virtual Organizations** Michelle W.
