Functional Analysis and Geometry: Selim Grigorievich Krein Centennial Peter Kuchment, Evgeny Semenov, 2019-07-26

This is the first of two volumes dedicated to the centennial of the distinguished mathematician Selim Grigorievich Krein. The companion volume is Contemporary Mathematics Volume 734. Krein was a major contributor to functional analysis, operator theory, partial differential equations, fluid dynamics, and other areas, and the author of several influential monographs in these areas. He was a prolific teacher, graduating 83 Ph.D. students. Krein also created and ran for many years the annual Voronezh Winter Mathematical Schools, which significantly influenced mathematical life in the former Soviet Union. The articles contained in this volume are written by prominent mathematicians, former students, and colleagues of Selim Krein, as well as lecturers and participants of Voronezh Winter Schools. They are devoted to a variety of contemporary problems in functional analysis, operator theory, several complex variables, topological dynamics, and algebraic convex and integral geometry.

Harmonic Analysis and Applications Michael Th. Rassias, 2021-04-01. This edited volume presents state of the art developments in various areas in which Harmonic Analysis is applied. Contributions cover a variety of different topics and problems treated, such as structure and optimization in computational harmonic analysis, sampling and approximation in shift invariant subspaces of L^2 , R optimal rank one matrix decomposition, the Riemann Hypothesis, large sets avoiding rough patterns, Hardy Littlewood series, Navier Stokes equations, sleep dynamics, exploration and automatic annotation by combining modern harmonic analysis tools, harmonic functions in slabs and half spaces, Andoni Krauthgamer, Razenshteyn, characterization of sketchable norms, fails for sketchable metrics, random matrix theory, multiplicative completion of redundant systems in Hilbert and Banach function spaces. Efforts have been made to ensure that the content of the book constitutes a valuable resource for graduate students as well as senior researchers working on Harmonic Analysis and its various interconnections with related areas.

Functions of Completely Regular Growth L.I. Ronkin, 2012-12-06. This monograph deals with functions of completely regular growth (FCRG), i.e. functions that have in some sense good asymptotic behaviour out of an exceptional set. The theory of entire functions of completely regular growth of one variable developed in the late 1930s soon found applications in both mathematics and physics. Later the theory was extended to functions in the half plane, subharmonic functions in space, and entire functions of several variables. This volume describes this theory and presents recent developments based on the concept of weak convergence. This enables a unified approach and provides a comparatively simple presentation of the classical Levin-Pfluger theory. Emphasis is put on those classes of functions which are particularly important for applications: functions having a bounded spectrum and finite exponential sums. For research mathematicians and physicists whose work involves complex analysis and its applications. The book will also be useful to those working in some areas of radiophysics and optics.

Sampling Theory, a Renaissance Götz E. Pfander, 2015-12-08 Reconstructing or approximating objects from seemingly incomplete information is a frequent challenge in mathematics science and engineering A multitude of tools designed to recover hidden information are based on Shannon's classical sampling theorem a central pillar of Sampling Theory The growing need to efficiently obtain precise and tailored digital representations of complex objects and phenomena requires the maturation of available tools in Sampling Theory as well as the development of complementary novel mathematical theories Today research themes such as Compressed Sensing and Frame Theory re-energize the broad area of Sampling Theory This volume illustrates the renaissance that the area of Sampling Theory is currently experiencing It touches upon trendsetting areas such as Compressed Sensing Finite Frames Parametric Partial Differential Equations Quantization Finite Rate of Innovation System Theory as well as sampling in Geometry and Algebraic Topology
