level of entrepreneurship in China This innovative book addresses this gap by investigating how an economic system dominated by central plans communist ideologies and suppressing bureaucracies could generate such energy from the bottom of society fuelling the country s economic growth Keming Yang s theory of entrepreneurship is based on two interrelated concepts double entrepreneurship and institutional holes He argues that the two concepts bridge a gap between the neo classical institutionalism of economic development and entrepreneurship studies that emphasize individual choice The rigorous theoretical framework is supported by substantial empirical research offering statistical analyses of survey data as well as detailed case studies This timely book will appeal to an interdisciplinary readership in sociology economics business studies and Chinese and Asian Studies

**Schumpeterian Perspectives on Innovation, Competition and**

**Growth** Uwe Cantner, Jean-Luc Gaffard, Lionel Nesta, 2009-07-25 Recent developments in economics have gone from the recognition of the importance of innovation for growth and the exploration of innovation mechanisms to the incorporation of the results of the previous research into economic models. An important lesson to be drawn from all this research is that a purely macro based analysis of growth is not enough. The various mechanisms of innovation creation and diffusion, the importance of agent heterogeneity of market selection processes of the internal organization of the firm and of organizational routines and the obsolescence and the consequent emergence of new types of capital goods are a few examples of micro economic phenomena that contribute decisively to macro economic development. The papers in this volume approach those issues from a Schumpeterian point of view and tackle issues like the growing importance of knowledge and human capital, increasing returns and path dependence, the role of variety in economic growth, competition and industry evolution.

**Competition Law** Luís Morais, 2013-11-01 This book examines the treatment of joint ventures (JVs) in EU Competition Law and at the same time provides a comparison with US law. It starts with an analysis of the rather elusive concept of JV encompassing both concentrative JVs subject to merger control and non concentrative JVs. Although focused on possible definitions of joint ventures in terms of competition law, it also includes a broader perspective going beyond competition law on the different legal models of structuring cooperation links between undertakings. At the core of the book is an attempt to build an analytical model for the assessment of JVs in terms of antitrust law, especially as regards Article 101 of the TFEU. The analytical model used proposes a set of sequential analytical levels taking into account structural factors and specific factors related to the main constituent elements of the functional programmes of JVs. The model is applied to a substantive assessment of four main types of JVs identified on the basis of their prevailing economic function: research and development JVs, production JVs, commercialization JVs and purchasing JVs. Also covered are particular situations of joint ownership of undertakings falling short of joint control. In the concluding part of the book, recent developments in JV antitrust law are put into context within the wider reform of EU Competition Law. The book is also comprehensively updated with the latest developments concerning the reform of the EU framework of horizontal cooperation between undertakings that took place at the end of 2010. **Measuring Entrepreneurship** Emilio Congregado, 2007-11-15 Entrepreneurship is playing an increasingly important role in the political agenda. This phenomenon is due to the increasing influence of politics on the entrepreneurial promotion of growth and employment objectives. This results in the need to satisfy the new demand for

statistical information in two ways On the one hand quantitative information stock and flow analysis on the other hand qualitative information which tries to assess the ability to create wealth and employment and to innovate and export among others Consequently searching a systematic set of indicators that allows us to understand the basic entrepreneurship dimensions in order to diagnose forecast and monitor entrepreneurial networks is crucial for both the research agenda and the political action agenda However the lack of this kind of statistical information is clear if we review some statistical subsystems on entrepreneurship on a comparison basis The few essays on the subject are still in an initial stage The reference theoretical framework to set the key dimensions to be analysed is to be established yet The search for indicators and even the articulation of specific statistics have become crucial in order to make progress in the applied research and to design implement and assess the different measurements of public intervention on this subject Thus the development of a set of indicators that allow us to satisfactorily capture the different dimensions of the entrepreneurial network for a specific sector or territory becomes a basic element to assist progress in entrepreneurship knowledge
