Entrepreneurial Science New Links Between Corporation Universities And Government:

Entrepreneurial Science Robert F. Johnston, 1987-09-22 Johnston and Edwards propose that high technology will be at the heart of the United States economy as it enters the 21st century. They also state that small business will be the key to the expansion of the United States economy in the year 2000. In this volume the authors analyze some significant trends that tend to support their proposals. Drawing upon case studies from the bio technology and microelectronics industries they discuss how changing the relationship between industry universities and the government is encouraging an entrepreneurial way of thinking. Business Library Newsletter Management strategy now is the management of continuous change and this timely book provides an in depth view of the remarkable opportunities that will be present for those who understand its message. D Bruce Merrifield Assistant Secretary for Productivity Technology and Innovation U S Department of Commerce

Entrepreneurial Science is a provocative analysis of some of the most significant new trends in the high technology based economy. Authors Johnston and Edwards use case studies from the biotechnology and microelectronics industries to illustrate how the traditional relationships between industry universities and the government are shifting towards new entrepreneurial relationships that will have significant and lasting effects on the U S economy. Demonstrating that the entrepreneurial firm is better equipped to develop the early stages of technology than the large company they contend that both individuals and corporations must adapt to an entrepreneurial way of thinking if they are to compete successfully in the marketplace over the next decade. Drawing heavily upon their own considerable experience in the biotechnology industry Johnston and Edwards fully discuss such emerging trends as the commercialization of the university innovative regional technology development programs the links between small entrepreneurial firms and university laboratories and the collaboration between large research based corporations and startup companies. As they clearly illustrate each of these trends is related and all will work together to radically alter the traditional path by which a product gets from the laboratory bench to the marketplace. Corporate managers entrepreneurs public policy experts and university administrators will find this book an indispensable aid as they plan for the future in their own institutions.

The Higher Learning and High Technology Sheila Slaughter, 1990-02-14 In this critical new work Slaughter investigates how university involvement in high technology influences higher education policy. By conducting a case study of the Business Higher Education Forum a liaison organization consisting of Fortune 500 Chief Executive Officers and presidents of well known research universities the author explores the policy agenda of the Forum the historical and structural antecedents of that agenda and its organizational implications for various post secondary sectors and their faculty.

Innovation and Adaptation in War Matthew A. Tattar, 2025-05-20 An analysis of advances in military technology that illustrates the importance of organizational flexibility in both an attacker's innovations and an opponent's adaptations. How important is military innovation in determining outcomes during armed conflict? In *Innovation and Adaptation in War* Matthew Tattar questions the conventional wisdom that to succeed militarily

organizations must innovate early and often. Because successful methods of warfare are soon widely imitated or countered on the international stage, the advantages of a particular innovation quickly evaporate. Therefore, Tattar argues, large-scale innovations at the cost of organizational flexibility and the ability to adapt to an adversary's innovations may not be the optimal path, not just because force readiness is vital but also because innovation does not provide as long-lasting and decisive an advantage as may have been previously thought. Although other scholars have analyzed the sources of military innovation, Tattar is the first to focus on the relationship between innovation and specific military outcomes. Looking at several different types of military organizations and many different types of battles, he draws on theoretical works in depth, historical research, and case studies and finds that the initial advantages that are generated by innovation disappear far too rapidly in wartime for militaries to depend on them for victory. Furthermore, as Tattar demonstrates, emphasizing innovation in defense planning at the expense of organizational flexibility can have significant negative consequences. The decisive factor in successful adaptation more often than not is a well-positioned and flexible organization. Providing both a new framework for studying military innovation and a comprehensive review of the current literature in this field, *Innovation and Adaptation in War* offers crucial policymaking insights into when and under what circumstances militaries should innovate and adapt.

Every American an Innovator Matthew Wisnioski, 2025-05-13 A landmark cultural history that reveals how the relentless pursuit of innovation has transformed our society, our institutions, and our inner selves. For half a century, innovation served as a universal good in an age of fracture. That consensus is cracking. While the imperative to innovate for a better future continues to fuel systemic change around the world, critics now assail innovation culture as an engine of inequality or accuse its do-gooders of woke groupthink. What happened? Drawing on a decade of research, *Every American an Innovator* by Matthew Wisnioski investigates how innovation, a once obscure academic term, became ingrained in our institutions, our education, and our beliefs about ourselves. Wisnioski argues that innovation culture did not spring from the digital revolution nor can it be boiled down to heroic entrepreneurs or villainous capitalists. Instead, he reveals the central role of a new class of experts in spreading toolkits and mindsets from the cornfields of 1940s Iowa to Silicon Valley tech giants today. This group of engineers, philosophers, bureaucrats, and business leaders posited that innovators were society's most important change agents and remade the nation in their image. The innovation culture they built transcended partisan divisions and made strange bedfellows. Wisnioski shows how Kennedy-era policymakers inspired President Nixon's dream of a Nobel Prize for innovators; how anti-military professors built the first university incubators for entrepreneurs; how radical feminists became millionaire consultants; how demands for a Rust Belt manufacturing renaissance inspired theories of a global creative class; how programs that encouraged girls and minority children to pursue innovative lives changed the nature of childhood play; and why the innovation consensus is now in dispute.

The Geography of Innovation M.P. Feldman, 1994-02-28 This book offers a geographic dimension to the study of innovation and product commercialization.

Building on the literature in economics and geography this book demonstrates that product innovation clusters spatially in regions which provide concentrations of the knowledge needed for the commercialization process The book develops a conceptual model which links the location of new product innovations to the sources of these knowledge inputs The geographic concentration of this knowledge forms a technological infrastructure which promotes information transfers and lowers the risks and the costs of engaging in innovative activity Empirical estimation confirms that the location of product innovation is related to the underlying technological infrastructure and that the location of the knowledge inputs are mutually reinforcing in defining a region's competitive advantage The book concludes by considering the policy implications of these findings for both private firms and state governments This work is intended for academics policy practitioners and students in the fields of innovation and technological change geography and regional science and economic development This work is part of a larger research effort to understand why the location of innovative activity varies spatially specifically the externalities and increasing returns which accrue to location xi Acknowledgements This work has benefitted greatly from discussions with friends and colleagues I wish to specifically note the contribution of Mark Kamlet Wes Cohen Richard Florida Zoltan Acs and David Audretsch I would like to thank Gail Cohen Shaivitz for her dedication in editing the final manuscript
