Entrepreneurship, the New Economy and Public Policy Uwe Cantner, Elias Dinopoulos, Robert F. Lanzillotti, 2009-09-02

Silicon Valley is the most salient example of high tech industrial clusters. Public policymakers throughout the world would like to learn the secrets of Silicon Valley in order to build their own high tech economies. The existing literature on industrial clusters which traces back to Marshall 1920 focuses on the way in which firms benefit from locating in a cluster; it suggests that once a cluster comes into existence it tends to reinforce itself by attracting more firms. However, a more important question is how to reach this critical mass in the first place. In contrast to the literature evidence suggests that entrepreneurs rarely move when they establish high tech start-ups. Cooper and Folta 2000. This contradicts the notion that location choice analyses lead entrepreneurs to a high tech cluster. A high tech industrial cluster such as Silicon Valley is characterized by concentrated entrepreneurship. Following Schumpeter we emphasize the fact that the appearance of one or a few entrepreneurs facilitates the appearance of others. Schumpeter 1934. We propose an agent based computational model to show how high tech industrial clusters could emerge in a landscape in which no firms existed originally. The model is essentially a spatial version of the Nelson Winter model. Boundedly rational agents are scattered over an explicitly defined landscape. Each agent is endowed with some technology which determines his firm's productivity if he has one. During each period of time an agent with no firm would make a decision as to whether he wants to start one. This decision is mostly affected by the behavior of his social contacts who are all his neighbors.

Catching Up, Spillovers and Innovation Networks in a Schumpeterian Perspective Andreas Pyka, Maria da Graça Derengowski Fonseca, 2011-05-10. This book discusses the influence of technological and institutional change on development and growth, the impact on innovation of labor markets, the spatial distribution of innovation dynamics and the meaning of knowledge generation and knowledge diffusion processes for development policies. The individual articles demonstrate the powerful possibilities that emerge from the toolkit of evolutionary and Schumpeterian economics. The book shows that evolutionary economics can be applied to the multifaceted phenomena of economic development and that a strong orientation on knowledge and innovation is key to development especially in less developed and emerging economies.

Schumpeterian Perspectives on Innovation, Competition and Growth Uwe Cantner, Jean-Luc Gaffard, Lionel Nesta, 2009-07-25. Recent developments in economics have gone from the recognition of the importance of innovation for growth and the exploration of innovation mechanisms to the incorporation of the results of the previous research into economic models. An important lesson to be drawn from all this research is that a purely macro based analysis of growth is not enough. The various mechanisms of innovation creation and diffusion, the importance of agent heterogeneity, of market selection processes, of the internal organization of the firm and of organizational routines and the obsolescence and the consequent emergence of new types of capital goods are a few examples of micro economic phenomena that contribute decisively to macro economic development. The papers in this volume approach those

issues from a Schumpeterian point of view and tackle issues like the growing importance of knowledge and human capital increasing returns and path dependence the role of variety in economic growth competition and industry evolution *The Battle for the Future of Antitrust* Aurelien Portuese,2025-01-08 In an era where technology is evolving at breakneck speed and populist movements are reshaping political landscapes the regulation of market participants stands at a critical crossroads The future of antitrust once a relatively stable domain of law and policy is now caught in a fierce battle between traditional doctrines and emerging approaches that seek to address the new realities of our time This book delves into this struggle offering a thought provoking exploration of how antitrust laws have evolved how they are being challenged and what is at stake for the future Through a unique lens that juxtaposes the legacies of Louis Brandeis Robert Bork and Joseph Schumpeter this book offers an insightful analysis of the forces shaping the future of antitrust By tracing the historical evolution of antitrust law through economic theory and examining the ongoing debates that define today's regulatory environment the author provides a comprehensive yet accessible guide to the competing schools of thought in this critical field This is a highly valuable resource for a diverse readership interested in the future of competition law and the broader regulation of innovation from legal experts to students of law and economics as well as professionals and policymakers navigating the complexities of market regulation **Innovation Dynamism and Economic Growth** Masaaki

Hirooka,2006-01-01 I think this book is a great achievement It is packed with useful information and thought provoking analysis and discussion The work on technological development is especially a very valuable original contribution to the work in this field The book illuminates the technological trajectory so often ignored by economists but which underlies Schumpeter's clusters of innovations and the emphasis on trunk innovations and analysis of their role is of particular interest Christopher Freeman SPRU Science and Technology Policy Research University of Sussex UK and Maastricht University The Netherlands This pathbreaking book addresses the economics of technological change as revealed by a unique methodology that uncovers the true nature of technological development Masaaki Hirooka bases this new approach to the economics of technological change on the recognition of the nonlinear dynamic nature of innovation In order to provide a richer understanding of technological development the book focuses on the period of innovation prior to market launch grounding the analysis within a distinct innovation paradigm This is expressed using three logistic trajectories technology development and diffusion which make it possible to interpret and better understand technology foresight infrastructure formation long business cycles and national innovation systems The author emphasizes the importance of the timing of innovation commitment knowledge transfer between and within these trajectories and the evolutionary character of innovation Those with an interest in economics macroeconomics technological change and evolutionary economics will find this book to be a highly stimulating and fascinating read **Systems and Innovation Research in Transition** Jakob Edler,Rainer Walz,2024-09-25 In the last decades it has become more and more imperative for our societies and for decision makers in all areas of society to

understand the dynamics through which innovation systems develop and through which socio technical systems transform themselves As both innovation and transformation are strongly intertwined it has equally become imperative to analyse their dynamics as well as their interplay This open access volume reflects on the research fields that have developed in the last five decades to do exactly that It defines and delineates research on systems and innovation as encompassing the scientific study of first the conditions dynamics and impacts associated with the generation and uptake of innovations and second the development and transformation of functional systems satisfying essential needs such as the provision of energy or water Further the area of Systems and Innovation Research SIR is characterised by problem and stakeholder oriented research We chose five decades as time frame because we noted that roughly 50 years ago a number of research institutes dedicated to SIR were founded and the SIR area started to grow significantly We present a systematic history of nine selected fields within the area of SIR Innovation policy Innovation indicators Foresight Policy Evaluation Technology Assessment Production Paradigms Renewable Energies Energy Efficiency Water Use We also present a conceptual framework to understand the processes by which the research fields have developed This allows to draw general lessons as to what drives fields throughout their development and how their role vis vis policy businesses and societies changes over time It also allows to speculate about future challenges and trends in the SIR area This is important because if anything the need to govern transformation through innovation will further grow in the future and with it the need to understand the underlying dynamics

Business Networks in Clusters and Industrial Districts Fiorenza Belussi, Alessia Sammarra, 2009-09-10 During the 1980s the Marshallian concept of industrial district ID became widely popular due to the resurgence of interest in the reasons that make the agglomeration of specialised industries a territorial phenomenon worth being analysed The analysis of clusters and IDs has often been limited considering only the local dimension of the created business networks The external links of these systems have been systematically under evaluated This book offers a deep insight into the evolution of these systems and the internal external mechanism of knowledge circulation and learning This means that the access to external knowledge information or R showing that existing capabilities expand when locally embedded knowledge is combined with accessible external knowledge In this view external knowledge linkages reduce the danger of cognitive lock in and over embeddedness which may become important obstacles to local learning and innovation when technological trajectories and global economic conditions change A selection of international experts

Public Policy in an Entrepreneurial Economy Zoltan J. Acs, Roger R. Stough, 2008-07-03 In recent years there has been increased focus on understanding the dynamic relationships among entrepreneurship policymaking and economic growth At the heart of research debate and practical application is the question Under what conditions can entrepreneurship flourish And the corollary To what degree does encouraging entrepreneurship result in economic growth A popular response is to argue for entrepreneurship policy that is targeted policies that are designed to promote innovation entrepreneurship and small business creation To the editors and contributors of this volume that approach is fundamentally flawed They argue that there is no such thing as a discrete entrepreneurship policy instead there is only policymaking in the context of an entrepreneurial economy The book addresses policies operating at the individual national regional and international levels and offers a unique perspective on several institutional structures that enhance
