Richard D. Wolff, Stephen A. Resnick, 2012-09-07 A systematic comparison of the 3 major economic theories neoclassical Keynesian and Marxian showing how they differ and why these differences matter in shaping economic theory and practice Contending Economic Theories offers a unique comparative treatment of the three main theories in economics as it is taught today neoclassical Keynesian and Marxian Each is developed and discussed in its own chapter yet also differentiated from and compared to the other two theories The authors identify each theory s starting point its goals and foci and its internal logic They connect their comparative theory analysis to the larger policy issues that divide the rival camps of theorists around such central issues as the role government should play in the economy and the class structure of production stressing the different analytical policy and social decisions that flow from each theory s conceptualization of economics Building on their earlier book Economics Marxian versus Neoclassical the authors offer an expanded treatment of Keynesian economics

and a comprehensive introduction to Marxian economics including its class analysis of society Beyond providing a systematic explanation of the logic and structure of standard neoclassical theory they analyze recent extensions and developments of that theory around such topics as market imperfections information economics new theories of equilibrium and behavioral economics considering whether these advances represent new paradigms or merely adjustments to the standard theory They also explain why economic reasoning has varied among these three approaches throughout the twentieth century and why this variation continues today as neoclassical views give way to new Keynesian approaches in the wake of the economic collapse of 2008
