Environment And Behavior:

Environment and Behavior Robert B. Bechtel, 1997-01-06 This comprehensive introductory text presents a unified view of human environment problems Unlike most texts in the field that treat environmental psychology as a branch of psychology only Environment and Behavior covers the topic from a cross disciplinary nature The book is more inclusive of all aspects of environmental studies and emphasizes the innovative thinking required to deal with environmental problems The breadth of coverage offered by Environment and Behavior will enable the instructor to choose the focus for each particular course because it contains chapters on a variety of subject areas including environmental engineering biology geography architecture evolutionary biology sociology clinical psychology and gerontology Environment and Behavior is a one of a kind text with a unique style that will make it a must for all courses related to the environment including urban studies and psychology

Perspectives on Environment and Behavior Daniel Stokols, 2012-03-30 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974 These colloquia were held in conjunction with Social Ecology 252 a graduate seminar on Man and the Environment Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior a representation of its major concerns and an analysis of its conceptual and empirical trends Thus expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology

Theoretical Perspectives in Environment-Behavior Research Seymour Wapner, Jack Demick, C. Takiji Yamamoto, Hiroufmi Minami, 2012-12-06 Following upon the Handbook of Japan United States Environment Behavior Research published by Plenum in 1997 leading experts review the interrelationships among theory problem and method in environment behavior research The chapters focus on the philosophical and theoretical assumptions underlying current research and practice in the area and link those assumptions to specific substantive questions and methodologies

Human Behavior and Environment Irwin Altman, Joachim F. Wohlwill, 2013-11-11 This is the first in a series of volumes concerned with research encompassed by the rather broad term environment and behavior The goal of the series is to begin the process of integration of knowledge on environmental and behavioral topics so that researchers and professionals can have material from diverse sources accessible in a single publication The field of environment and behavior is broad and interdisciplinary with researchers drawn from a variety of traditional disciplines such as psychology sociology anthropology geography and other social and behavioral sciences and from the biological and life sciences of medicine psychiatry biology and ethology The interdisciplinary quality of the field is also reflected in the

extensive involvement of environmental professionals from architecture urban planning landscape architecture interior design and other fields such as recreation and natural resources to name just a few At present the field has a somewhat chaotic flavor with research being carried out by a variety of scholars who publish in a multitude of outlets Many researchers and practitioners are unaware of the state of knowledge regarding a specific topic because of the unavailability of integrated reference materials There are only a handful of books dealing with environment and behavior most of them unintegrated collections of readings with only an occasional systematic analysis of some facet of the field

C. Holahan, 2012-12-06 This book has been written as a text for advanced undergraduate students and graduate students in the burgeoning field of study that has come to be called environment and behavior It is appropriate for courses in environmental psychology social ecology ecological psychology and community psychology when the community is conceptualized from an ecological viewpoint In addition the book may be used in design courses oriented toward an appreciation of the interaction between architecture and human behavior The book presents a thorough explication of a perspective or viewpoint in approaching the study of environment and behavior which has tended to be underemphasized in past work in this area The dynamic perspective focuses on the active role people play in dealing with environmental challenges Its investigative interest is in the processes that mediate the effects of environment on behavior especially the positive and adaptive ways in which people cope with the environment The accent is on the creative complex yet subtle character of these environmental processes

Person-Environment-Behavior Research Douglas Amedeo, Reginald G.

Golledge, Robert J. Stimson, 2008-09-26 Research into spatial influences on people's everyday activities and experiences presents many conceptual and methodological complexities Written by leading authorities this book provides a comprehensive framework for collecting and analyzing reliable person environment behavior data in real world settings that rarely resemble the controlled conditions described in typical texts An array of research designs are illustrated in chapter length examples addressing such compelling issues as spatial patterns of voting behavior ways in which disabilities affect people's travel and wayfinding how natural and built environments evoke emotional responses spatial factors in elementary teaching and learning and more A special chapter guides the student or beginning researcher to craft a successful research proposal

Behavior and the Natural Environment Irwin Altman, Joachim F. Wohlwill, 2012-12-06 The theme of the present volume concerns people's response to the natural environment considered at scales varying from that of a household plant to that of vast wilderness areas Our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of social scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment behavior field It also serves to bring out once again the interdisciplinary nature of that field and we are pleased to have been able to include representatives from geography sociology social ecology and natural recreation among our contributors We

believe that this volume will serve a useful purpose in helping to integrate the findings and concepts in this presently somewhat fragmented field scattered as they are over a very diverse array of publications representing a similarly varied group of specialties. It is hoped that the result will be to stimulate future development of this area and to add a measure of increased coherence to it. Volume 7 of our series will be devoted to the theme of elderly people and the environment with M. Powell Lawton joining us as guest co-editor. The titles of the papers comprising Volume 7 are shown on page v.

Environment and Behavior Studies Irwin Altman, Kathleen Christensen, 2012-12-11. This eleventh volume in the series departs from the pattern of earlier volumes. Some of those volumes addressed research design and policy topics in terms of environmental settings for example homes, communities, neighborhoods and public places. Others focused on environmental users for example children and the elderly. The present volume examines the field of environment and behavior studies itself in the form of intellectual histories of some of its most productive and still visible senior participants. In so doing we hope to provide readers with a grand sweep of the field, its research and design content, methodology, institutions and past and future trajectories through the experiences and intellectual histories of its participants. Why intellectual histories? Several factors led to the decision to launch this project. For one, 1989 was an anniversary and commemorative year for the Environmental Design Research Association, perhaps the major and most long-standing interdisciplinary organization of environment and behavior researchers and practitioners. Established in 1969, this organization has been the vehicle for generations of researchers and practitioners from many disciplines to come together annually to exchange ideas, present papers and develop professional and personal relationships. It held its first and twentieth meetings in North Carolina with the twentieth conference substantially devoted to discussions of the past, present and future of the field, a taking stock so to speak. Thus it seemed appropriate to launch a volume on intellectual histories at this significant juncture in the life of the field.

The Physical Environment and Behavior Joachim F. Wohlwill, Gerald D. Weisman, 1981-05-31. 1491 entries to monographs, journal articles, reports of government agencies or academic institutions and dissertations. Intended for the advanced student and the researcher in the fields of environmental psychology and related disciplines. Classified arrangement. Each entry gives bibliographic information and brief non-evaluative annotation. Author index.

Cherulnik,1993-07-30 Architects city planners and other design professionals have used theory and research from psychology and other behavioral sciences to make their work more responsive to the needs of the people who use the buildings parks and city streets they help to shape This book describes in detail thirteen cases in which that approach was followed It analyzes the use of environmental design research in each case demonstrating how it has made a positive contribution in these cases and how its use can improve design and planning processes in general and thus the quality of the built and natural environments **Research Methods for Environmental Psychology** Robert Gifford,2016-01-19

Covering the full spectrum of methodology the timely and indispensable Research Methods for Environmental surveys the research and application methods for studying changing and improving human attitudes behaviour and well being in relation to the physical environment The first new book covering research methods in environmental psychology in over 25 years Brings the subject completely up to date with coverage of the latest methodology in the field The level of public concern over the impact of the environment on humans is high making this book timely and of real interest to a fast growing discipline

Comprehensively surveys the research and application methods for studying changing and improving human attitudes behavior and well being in relation to the physical environment Robert Gifford is internationally recognised as one of the leading individuals in this field and the contributors include many of the major leaders in the discipline Encouraging

Sustainable Behavior Hans C.M. van Trijp,2013-08-15 Increasingly it is being recognized that consumer behavior may be a key trigger in the march toward sustainable development Several lines of psychological theory and approaches have been developed relatively independently each of which may provide major implications and action points on how consumers might be moved toward more sustainable behavior This book is the first that brings together this variety of perspectives and theoretical angles around the common ambition of sustainable development The contributors are all leading social scientists in the field of consumer behavior who met the challenge to sketch out their theoretical perspectives but also to go beyond their normal theorizing and think out of the box in order to show how these theoretical perspectives might be made actionable in terms of key managerial and policy perspectives toward sustainable development The result is a book that shows a wealth of information and approaches the question of how to encourage sustainable behavior from a myriad of divergent perspectives This should stimulate scientists and policy makers alike to find similarities differences and synergies between state of the art psychological thinking about how to most effectively stimulate sustainable consumer behavior

The Environment and Social Behavior Irwin Altman,1975 Advances in Environment, Behavior and Design Erwin H.

Zube, Gary T. Moore, 2013-11-11 This second volume in the Advances in Environment Behavior and Design series follows the pattern of Volume 1. It is organized into six sections: user group research consisting of advances in theory, place research, sociobehavioral research, research and design methods, and research utilization. The authors of the chapters in this volume represent a range of disciplines including architecture, geography, psychology, social ecology, and urban planning. They also offer international perspectives: Tommy Garling from Sweden, Graeme Hardie from South Africa (recently relocated to North Carolina), Gerhard Kaminski from the Federal Republic of Germany, and Roderick Lawrence from Switzerland (formerly from Australia). Although most chapters address topics or issues that are likely to be familiar to readers (environmental perception and cognition, facility programming, and environmental evaluation), four chapters address what the editors perceive to be new topics for environment behavior and design research. Herbert Schroeder reports on advances in research on urban forestry. For most of us, the term forest probably conjures up visions of dense woodlands in rural or wild settings. Nevertheless, in many parts of the country, urban areas have higher densities of tree coverage than can be found in surrounding rural landscapes. Schroeder reviews research that addresses the perceived and actual benefits and costs associated with these urban forests.
