Robert C. Wilkinson, William R. Freudenburg, 2007-12-12 Soon after the first Earth Day in 1970 the academic world saw a virtual explosion of new interdisciplinary environmental programs many of which took explicit note for the first time of the fact that environmental problems are inherently social problems as well Even in the new programs however issues of equity and the environment were usually relegated to isolated classes on environmental ethics Today they still are      **21st**

*Society in Asia* Paul G. Harris, Graeme Lang, 2014-09-19 Nowhere is the connection between society and the environment more evident and potentially more harmful for the future of the world than in Asia In recent decades rapid development of Asian countries with very large populations has led to an unprecedented increase in environmental problems such as air and water pollution solid and hazardous wastes deforestation depletion of natural resources and extinction of native species This handbook provides a comprehensive survey of the cultural social and policy contexts of environmental change across East Asia The team of international experts critically examine a wide range of environmental problems related to energy climate change air land water fisheries forests and wildlife The editors conclude that with nearly half of the human population of the planet and several rapidly growing economies most notably China Asian societies will determine much of the future of human impacts on the regional and global environments As climate change related threats to society increase the book strongly argues for increased environmental consciousness and action in Asian societies This handbook is a very valuable companion for students scholars policy makers and researchers working on environmental issues in Asia      *Environmental Literacy in Science and Society* Roland W. Scholz, 2011-07-21 In an era where humans affect virtually all of the earth's processes questions arise about whether we have sufficient knowledge of human environment interactions How can we sustain the

Earth's ecosystems to prevent collapses and what roles should practitioners and scientists play in this process. These are the issues central to the concept of environmental literacy. This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development. Approaching the topic from multiple perspectives, it explores the development of human understanding of the environment and human environment interactions in the fields of biology, psychology, sociology, economics, and industrial ecology. The discussion emphasises the importance of knowledge integration and transdisciplinary processes as key strategies for understanding complex human environment systems (HES). In addition, the author defines the HES framework as a template for investigating sustainably coupled human environment systems in the 21st century.

A Companion to Environmental Geography Noel Castree, David Demeritt, Diana Liverman, Bruce Rhoads, 2016-10-03. A Companion to Environmental Geography is the first book to comprehensively and systematically map the research frontier of human environment geography in an accessible and comprehensive way. Cross-cuts several areas of a discipline which has traditionally been seen as divided, presenting work by human and physical geographers in the same volume. Presents both the current state of the art research and charts future possibilities for the discipline. Extends the term environmental geography beyond its traditional meanings to include new work on nature and environment by human and physical geographers, not just hazards, resources, and conservation geographers. Contains essays from an outstanding group of international contributors from among established scholars and rising stars in geography.

Environment, Society, and The Compleat Angler Marjorie Swann, 2023-08-31. First published in 1653, *The Compleat Angler* is one of the most influential environmental texts ever written. Addressing a politically and religiously polarized nation devastated by warfare, disease, ecological degradation, and climate change, Izaak Walton's famous fishing treatise stages a radical thought experiment: how might humanity's enhanced relationship with the natural world generate a new kind of sustaining and sustainable social order beyond the traditional boundaries of the church, the state, and the biological family? Challenging the current scholarly consensus that reads Walton's how-to manual as a conservative polemic camouflaged by fishlore, Marjorie Swann examines this richly complicated portrayal of the natural world through an ecocritical lens and explores other neglected aspects of Walton's writings, including his depictions of social hierarchy, gender, and sexuality. In the process, Swann analyzes a host of noncanonical environmental texts and provides a groundbreaking reappraisal of Charles Cotton's Part II of *The Compleat Angler*. This study extends the hydrological turn in early modern ecocriticism and demonstrates how, as a genre, angling manuals provide new insights into the environmental, cultural, social, and literary history of early modern England. Taking its place alongside landmark works of ecocriticism such as *Green Shakespeare* and *Milton and Ecology*, this fresh and timely reassessment of *The Compleat Angler* rightly ranks Izaak Walton among the most important environmental writers of the early modern era.
