3 4 times as many species each The of the English Channel shows that there are comparison is more marked when consider species present in England and not in ing the endemic species those specialities of northern France as well as vice versa Many each geographical region which grow of the species present in northern France but nowhere else If only normal sexual species absent from England are weeds adapted to are considered then there are only about 13 French agriculture Others may be limited endemic species in the British Isles while 1000 not by the sea but by the climate species are endemic to Spain Nevertheless the example of Ireland However the poverty of the British flora is which was isolated much earlier than the rest not a unique phenomenon The whole of of the British Isles does show the effect of north western Europe an area including isolation because it does have a much poorer northern France and much of Germany and flora and fauna The Farming of Prehistoric Britain P.
