Environmental Economics And The International Economy:

Environmental Economics and the International Economy Laura Marsiliani, Michael Rauscher, Cees Withagen, 2002-10-31 Thirteen papers addressing current issues in international environmental economics. They analyze the relationship between trade liberalization and environmental policy, the impact of trade liberalization on environmental quality, investigate problems of commitment faced by regulating authorities, provide new insights into the Porter hypothesis, present empirical research related to international competitiveness and location of polluting plants, address international environmental agreements with a special focus on income distribution and the political economy dimension, tradable emission reductions and the quantitative impact of trade liberalization and the implementation of the Kyoto Protocol on carbon leakage. The papers in this volume show that even after ten years of intense research both on trade and the environment and on transfrontier pollution and international environmental agreements, research in this area still produces new relevant and thought provoking ideas and results.

Environmental Economics Stephen Smith, 2011-09-22 If environmental protection is costly how much should we spend on pollution control Is it worth reducing pollution to zero or should we accept some level of pollution because of the economic benefits associated with it How can we assess the benefits that people get from a less polluted atmosphere In broad terms environmental economics looks at how economic activity and policy affect the environment in which we live Some production generates pollution such as power station emissions causing acid rain and contributing to global warming but household consumption decisions also affect the environment where more consumption can mean more waste sent to polluting incinerators However pollution is not an inevitable consequence of economic activity environmental policies can require polluting firms to clean up their emissions and can encourage people to change their behaviour through environmental taxes on polluting goods for example Generally though these measures will involve some costs such as installing pollution control equipment So there s a trade off a cleaner environment but economic costs In recent years many economists have argued for greater use of incentive in the form of pollution charges and emissions trading rather than more traditional direct regulation of polluters In this Very Short Introduction Stephen Smith discusses environmental issues including pollution control reducing environmental damage and global climate change policies answering questions about
