Topics in Environmental Economics M. Boman, Runar Brännlund, Bengt Kriström, 2013-03-14 This book shows we believe the breadth and the complexity of issues that economists now tackle in their analysis of the connections between the ecosystem and the economic system The book offers contributions to such disparate issues as the value of preserving the wolf in Sweden and the proper distribution of permits in an effective global warming treaty Because these questions remain at the fore front of important resource allocation problems that need to be confronted it is only appropriate that they are represented in a book that intends to paint a picture albeit certainly incomplete of the vibrant and progressing state of environmental economics The contributions cover five areas of environmental economics policy instruments cost benefit analysis cost efficiency contingent valuation and experimental economics Each area is worthy of a book by itself but here we have made a point of focusing on problems that seem directly applicable to the pressing policy issues of today Thus the contributors address topics that are directly relevant to international and regional policy making as well as those that are linked to development of supporting information systems e g resource accounting In addition the contributions seek to provide high level applications of measurement techniques as well as pertinent critiques of these methods The next section provides a summary overview of the book Advanced Integrated Approaches to Environmental Economics and Policy: Emerging Research and Opportunities Patti, Sebastiano, Trizzino, Giampiero, 2019-10-11 Sustainable development remains a significant issue in a globalized world requiring new economic standards and practices for the betterment of the environment

*Introduction to Environmental Economics and Policy in Japan* Toshi H. Arimura, Akira Hibiki, 2024-06-28. This textbook demonstrates how economic theories can be used for environmental policy evaluations. A notable feature of this book is that, unlike most textbooks in environmental economics written in English, it draws on examples from Japan's policy on energy, resource pollution, and carbon emissions. Policy measures discussed in this book include controls on motor vehicle emissions, pricing of waste disposal, deposit refund scheme for recycling, carbon taxes, and emissions trading schemes. With topics involving transboundary environmental concerns such as climate change, air pollution, and waste management, and recycling, the book also integrates international perspectives and provides comparisons of policies across regions and countries. A major objective of this book is to present a concise and accessible introduction to environmental economics as applied to policy evaluations in and beyond Japan. The knowledge available from this book must be very useful for students, policymakers, and practitioners who seek environmental policy solutions from an economic point of view. This is an open access book.

The three volumes of *Environmental Policy in an International Context* have been developed by the Dutch and UK Open Universities as part of the International Environmental Series. They accompany a workbook and six videos. The first volume takes a critical and analytical look at contemporary environmental issues built around the key questions: what are international and environmental problems and why have they become important politically? These questions are examined from a variety of viewpoints: science, sociology, politics, law, and economics. A multi-disciplinary approach is emphasised, and it shows how both technical and scientific solutions need to be sought alongside.

*Environmental Policy Instruments for Conserving Global Biodiversity* Oliver Deke, 2008-03-29 If you can believe all things are possible to him who believes Mark 9 23 The current unprecedented loss of global biodiversity as a result of anthropogenic interference in the world's ecosystems is affecting human well being across the globe with increasing severity It therefore represents a major challenge in international environmental policymaking With the Convention on Biological Diversity CBD the community of states has recognized the increasing importance of preserving biodiversity Given the extensive context of biodiversity loss and preservation this study focuses on two issues which are at the center of the public discussion regarding the objectives of

conservation and the sustainable use of biodiversity and that are addressed by specific policy instruments The first issue is the regulation of cross border trade in genetic information and genetic resources Here the question is whether the commercial use of genetic information derived from bio diversity can create incentives for its preservation The second issue involves the conservation of biodiversity through the protection of ecologically valuable eco systems from human use Here the question is how the protection of these natu ral areas and the consequent restriction of destructive human use can be organized effectively on an international level I am very grateful to Professor Horst Siebert for offering valuable advice and support I also am indebted to Professor Till Requate for his helpful ideas and encouragement
