## **Environmental Instruments And Institutions Environmental Analysis And Economic Policy Series:**

*Environmental Commodities Markets and Emissions Trading* Blas Luis Pérez Henríquez, 2013-03-05 Market based solutions to environmental problems offer great promise but require complex public policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis Pérez Henríquez analyzes past market based environmental programs to extract lessons for the future of ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California's ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious Pérez Henríquez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations *Environmental Responses* Andrew Blowers, Steve Hinchliffe, 2003-09-11 Climate change urban congestion nuclear waste deforestation destruction of wildlife how can we respond to these and the many other environmental problems that the world faces today Can we trust the experts Does technology have the answers Should we look to governments or to markets to solve the problems Are political solutions possible Should we be optimistic or pessimistic about the environmental futures To address these questions we need to look at environmental responses in an integrated way This includes understanding the responses of environments to change and the responses to those changes made by societies *Environmental Responses* takes an innovative interdisciplinary approach to understanding the risks and uncertainties that inform our responses to environments Featuring places such as Lake Baikal Andalusia Cumbria and Bhutan the book is richly illustrated drawing on examples from across the world Among the issues covered are how we might deal with environmental risk in conditions of scientific and political uncertainty the need to understand the technical economic and political responses to environmental change finding new ways of involving citizens in decisions affecting environmental futures the prospects for achieving sustainable forms of development *Environmental Responses* is the final book in a series entitled *Environment Change Contest and Response* that forms a large part of an Open University interdisciplinary course on environmental matters The other books in the series are *Understanding Environmental Issues* *Changing Environments* *Contested Environments* **New Perspectives for Environmental Policies Through Behavioral Economics** Frank Beckenbach, Walter Kahlenborn, 2015-09-25 This book presents essential insights on environmental policy derived from behavioral economics The authors demonstrate the potential of behavioral economics to drive environmental protection and to generate concrete proposals for the efficient design of policy instruments Moreover detailed recommendations on how to use nudges and related instruments to move industry and society toward a sustainable course are presented This book addresses the needs of environmental economists behavioral economists and environmental policymakers as well as all readers interested in the intersection between behavioral economics and environmental policy

**The Theory and Practice of Command and Control in Environmental Policy** Peter Berck,2018-01-12 This title was first published in 2003 Economists have had increasing success in arguing the merits of market based approaches to environmental problems By making polluting expensive market based approaches provide polluters with incentives to clean up rather than mandates to stop polluting These approaches include pollution taxes transferable emissions permits and subsidies for pollution abatement The purpose of this volume is to explore the situations where Command and Control CAC may not be all bad and in fact might even have some advantages over market based instruments MBI

**China's Way to Carbon Emissions Reduction** Ying Shen,2015-08-18 Now that the most recent scientific estimates have shown that China has become the world s largest source of greenhouse gas emissions China s influence on the world s environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China s current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories legal challenges from China s current administrative legislation and the definition of carbon emissions entitlements practical effect of China s climate change policy at the national provincial and local levels effectiveness of China s implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China s seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China s ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a

willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

*The Theory of Environmental Agreements and Taxes* Martin Enevoldsen, 2005-01-01 Martin Enevoldsen's book is a pioneering work that compares the impacts of various non regulatory environmental strategies in achieving measurable pollution reductions Much has been written on the theoretical virtues and drawbacks of green taxation versus the adoption of voluntary agreements when it comes to effective implementation of environmental goals In convincing detail this book makes the case for the effectiveness of environmental taxation its barriers being primarily political in nature rather than economic Green taxes are highly controversial even in the most environmentally conscious nations particularly when they are regarded as a purely fiscal instrument The successful Danish CO2 taxation on industry which this study proves to be much more effective than the Dutch system of voluntary agreements or the Austrian laissez faire policies relied not only on the inducement of the CO2 tax itself all of the tax revenue was ploughed back into industry as subsidies for investments in

advanced energy saving technologies Martin Enevoldsen's book is simply a must for political scientists environmental economists and environment policymakers Svend Auken M P and former Danish Minister for Environment and Energy Although there is a huge demand for accurate analysis of environmental policy outcomes in both the academic and policy making communities there is currently very little theoretical research on this issue This ambitious book redresses the balance by constructing a new theoretical framework at the crossroads between economics and political science to account for the effectiveness of environmental governance Drawing on insights from new institutional economics environmental economics collective action theory and social capital theory the author analyses how policy outcomes are influenced by institutional factors that constrain and empower the target groups of environmental regulation
