**Environmental Interaction** David Canter, David V. Canter, Peter Stringer, 1975      **Directions in Person-Environment Research and Practice (Routledge Revivals)** Jack Nasar, Wolfgang F. E. Preiser, 2016-06-10 First published in 1999 this book presents a fresh and diverse set of perspectives representing key directions of research and practice in the field of environmental design research. Leading researchers in various areas of person environment research such as privacy children's environment post occupancy evaluation environmental cognition environmental aesthetics crime prevention housing and environmental protection and environmental design present what they consider their best work. The book argues for the value of a multi disciplinary and interdisciplinary approach to problem solving and outlines many important directions for methods research and practice.

*Behavioural Analysis of Crime* Donna Youngs, 2016-04-15 The intense interest in offender profiling generated by FBI special agents gave rise to an explosion of studies in a new area called investigative psychology by its originator David Canter. This develops understanding of offenders behaviour that can be harnessed to improve investigations. In this rapidly developing area much has been learnt about what offenders reveal about themselves through their styles of offending. Beyond criminals actions the location of their crimes can also reveal where the offender lives or which offences can be linked as part of the same series. Investigative psychologists also explore how to interview witnesses and suspects and assess the veracity of accounts given. The variation in criminal style across crimes as diverse as arson burglary hostage negotiation serial killing and sexual assault is reviewed using narrative theory and criminals emotional experience when offending as the basis for explaining these variations. This provides a framework for drawing inferences about offenders characteristics. Studies in investigative psychology require a special methodology developed by David Canter to allow scientific explorations in such a challenging field previously assumed not to be open empirical study. The practical potential and applications of the research are given as well as a selection of commentaries on the cutting edge debates that are driving the future of the investigative psychology. This new discipline is of relevance to forensic psychologists in many different settings criminologists and law enforcement agencies bringing together work that lays out current achievements and sets the agenda for future research in the field.

**Environmental and Architectural Psychology** Ian Donald, 2022-06-14 **Environmental and Architectural Psychology The Basics** is a jargon free and accessible introduction to the relationship between people and their natural and built environment. Exploring everything from the effectiveness of open plan offices to how people respond to life threatening disasters the book addresses issues around sustainability climate change and behaviour and is grounded in theory and ideas drawn from psychology geography and architecture. Author Ian Donald introduces both the theoretical underpinnings and the applications of environment behaviour research to solving real world problems encouraging readers to reflect on the role of design and policy in shaping the environments in which they live and work. With chapters considering the impact of

environment on identity wellbeing crime and spatial behaviour Donald shows us not only how people shape and affect the environment but also in turn how the environment shapes and affects people s thoughts feelings and behaviours Addressing some of the most important questions of our time including how behaviour drives climate change and what we can do about it this is the ideal book for anyone interested in the interactions between architecture the environment and psychology

Spatial Cognition VII Christoph Hölscher, Thomas F. Shipley, Marta Olivetti Belardinelli, John A Bateman, Nora S Newcombe, 2010-08-09 This is the seventh volume of a series of books on fundamental research in spatial cognition As with past volumes the research presented here spans a broad range of research traditions for spatial cognition concerns not just the basic spatial behavior of biological and artificial agents but also the reasoning processes that allow spatial planning across broad spatial and temporal scales Spatial information is critical for coordinated action and thus agents interacting with objects and moving among objects must be able to perceive spatial relations learn about these relations and act on them or store the information for later use either by themselves or communicated to others Research on this problem has included both psychology which works to understand how humans and other mobile organisms solve these problems and computer science which considers the nature of the information available in the world and a formal consideration of how these problems might be solved Research on human spatial cognition also involves the application of representations and processes that may have evolved to handle object and location information to reasoning about higher order problems such as displaying non spatial information in diagrams Thus work in spatial cognition extends beyond psychology and computer science into many disciplines including geography and education The Spatial

Cognition conference offers one of the few forums for consideration of the issues spanning this broad academic range
