**The 1996 Baseline Environmental Management Report**, 1996 *The 1996 Baseline Environmental Management Report: Report*, 1996 **Environmental management in the Dutch food and beverage industry** Derk-Jan Haverkamp, 2023-08-28 Because of the growing societal concerns regarding industrial environmental pollution it is essential to get a deeper understanding of the factors influencing firms to reduce their environmental impact This book considers these concerns by evaluating the importance of these factors in reference to environmental management in the Dutch food and beverage industry It develops an integrated research framework building on the inside out and outside in perspectives on environmental management Empirical data were gathered in 2002 and 2005 This book provides interesting insights into the developments in this period showing that the impact of the business environment has extended from the traditionally important stakeholders such as government and societal groups to include commercial chain and network actors as well including buyers and suppliers but also bank and insurance firms Furthermore the analyses demonstrate that public private voluntary agreements can be an effective policy instrument Firms with a proactive business strategy appear to pay more attention to environmentally friendly product re design which is crucial to reduce environmental impact from a cradle to cradle perspective This book is of interest to environmental and general management in firms that want to reach environmental excellence Policy implications are drawn for environmental policy makers environmental agencies and environmental interest groups that aim for stimulating firms to clean up **An End State Methodology for Identifying Technology Needs for Environmental Management, with an Example from the Hanford Site Tanks** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Technologies for Cleanup of High-Level Waste in Tanks in the DOE Weapons Complex, 1999-04-16 A major issue in the cleanup of this country's nuclear weapons complex is how to dispose of the radioactive waste resulting primarily from the chemical processing operations for the recovery of plutonium and other defense strategic nuclear materials The wastes are stored in hundreds of large underground tanks at four U S Department of Energy DOE sites throughout the United States The tanks contain hundreds of thousands of cubic meters of radioactive and hazardous waste Most of it is high level waste HLW some of it is transuranic TRU or low level waste LLW and essentially all containing significant amounts of chemicals deemed hazardous Of the 278 tanks involved about 70 are known or assumed to have leaked some of their contents to the environment The remediation of the tanks and their contents requires the

development of new technologies to enable cleanup and minimize costs while meeting various health safety and environmental objectives While DOE has a process based on stakeholder participation for screening and formulating technology needs it lacks transparency in terms of being apparent to all concerned decision makers and other interested parties and a systematic basis in terms of identifying end states for the contaminants and developing pathways to these states from the present conditions An End State Methodology for Identifying Technology Needs for Environmental Management with an Example from the Hanford Site Tanks describes an approach for identifying technology development needs that is both systematic and transparent to enhance the cleanup and remediation of the tank contents and their sites The authoring committee believes that the recommended end state based approach can be applied to DOE waste management in general not just to waste in tanks The approach is illustrated through an example based on the tanks at the DOE Hanford Site in southeastern Washington state the location of some 60 percent by volume of the tank waste residues
