Environmental Policies For Agricultural Pollution Control:

Environmental Policies for Agricultural Pollution Control J. S. Shortle, David Gerrard Abler, 2001-09-05 This book describes the environmental problems associated with agriculture particularly the use of pesticides and chemical fertilizers and the disposal of animal waste These have become major policy issues in many countries with the main polluting effect being on water quality As with other types of pollution significant reductions in agriculture's contribution to water pollution requires the application of either enforceable regulatory approaches or changes in the economic environment so that farmers adopt environmentally friendly production practices Providing a review and guide to the policy options and their economic administrative and political merits the reader can develop an understanding of these options and their merits in the emerging policy context The principal focus is on the developed world particularly North America and Europe The book is aimed at advanced students researchers and professionals in agricultural economics and policy and environmental and pollution sciences

Overcoming Agricultural Pollution of Water Susanne M. Scheierling, 1995 World Bank Technical Paper No 269 Water problems are emerging as the most compelling set of issues facing agricultural production in the 1990s To address the policy challenges posed by this dilemma this study focuses on the experience of the EU

Reseña de "Environmental Policies for Agricultural Pollution Control" de J.S. Shortle y D. Abler Rosario Pérez Espejo, 2005

Water Quality and Agriculture James Shortle, Markku Ollikainen, Antti Iho, 2021-06-12 Water pollution control has been a top environmental policy priority of the world's most developed countries for decades and the focus of significant regulation and public and private spending Yet significant water quality problems remain and trends for some pollutants are in the wrong direction This book addresses the economics of water pollution control and water pollution control policy in agriculture with an aim towards providing students environmental policy analysts and other environmental professionals with economic concepts and tools essential to understanding the problem and crafting solutions that can be effective and efficient The book will also examine existing policies and proposed reforms in the developed world Although this book addresses and has a general applicability to major water pollutants from agriculture e.g pesticides pharmaceuticals sediments nutrients it will focus on the sediment and nutrient pollution problem The economic and scientific foundations for pollution management are best developed for these pollutants and they are currently the top priorities of policy makers Accordingly the authors provide both highly salient and informative cases for developing concepts and methods of general applicability with high profile examples such as the Chesapeake Bay Lake Erie and the Gulf of Mexico Dead Zone in the US the Baltic Sea in Northern Europe and Lake Taupo in New Zealand

Policy Networks Under Pressure Carsten Daugbjerg, 2018-11-09 First published in 1998 this book examines how established policy networks and the broader context within which they are embedded influence the choice of policy when change has been put on the agenda It criticises the existing network literature for being predominantly descriptive for having little to say on the choice of policy and for omitting the analysis of the broader

political structures which have consequences for meso level policy making In order to reinforce the explanatory power of policy network analysis the book develops both a meso and a macro level theoretical model They help to explain why policy change is more radical in some settings than in others The theoretical arguments are tested by the use of detailed comparisons of agri environmental policy making in Denmark and Sweden and of agricultural policy reforms in the European Union and Sweden *Alternative Policies for Controlling Nonpoint Agricultural Sources of Water Pollution* Wesley D. Seitz,1978 *Water and Agriculture Sustainability, Markets and Policies* OECD,2006-10-23 Explores how both governments and the private sector can expand the role of markets to allocate water used by all sectors and to get agricultural producers to account for the pollution that their sector generates **Drinking Water Supply and Agricultural Pollution** G.J. Schrama,2012-02-02 Agricultural pollution with nitrates and pesticides is one of the biggest threats to drinking water resources At many places regional and local water authorities together with the water supply industry are involved in preventive action aimed at farming practices Three national case studies Germany The Netherlands and the United Kingdom analyse these efforts within the context of problematical national agricultural policy and the need to implement EU directives on water quality Additional case studies cover the role of the European Union while the same problem in a different setting is analysed for the United States The central question of how national and European governments can reinforce the control capacity of the actors at the regional and local level is treated from the theoretical perspective of the policy network approach *The Economics of Agri-Environmental Policy, Volume II* Sandra S. Batie,Richard D. Horan,2017-11-30 This two volume set collects key essays examining economic theory methods and issues salient to agri environmental policy in the US and in Europe as well as in other countries The topics under discussion are arranged thematically and include theoretical numerical and empirical works all are grounded in policy and economics The introduction to these volumes reviews the evolution of agri environmental policies with an important focus on the history of US policy and European agri environmental policy A key feature within this is the importance of the Environmental Protection Agency EPA in the US particularly its move towards more market based incentives from the 1980s onwards Within the European context the effects of the CAP Common Agricultural Policy on agri environmental programmes and schemes within the member states are discussed Significantly the essays republished here have provided the knowledge base that has influenced further applied work creating an influential impact on policy development *The Economics of Water Quality* Naomi Zeitouni,2019-10-22 This volume brings together a number of prominent economic studies all of which deal with key water quality issues The studies focus on the economic aspects of water quality including identifying the polluters actions and incentives designing and comparing control mechanisms analyzing the costs and benefits of water quality programmes and finally managing transboundary water quality They all make recommendations for improving water quality through changing incentives programmes and or policies *Agriculture, Trade and the Environment The Arable Crops Sector* OECD,2005-09-26 This OECD 2005 study takes an in

depth look at the arable crops sector in OECD countries and draws some conclusions about the impacts of agricultural support policies trade liberalisation agri environmental payments and agri environmental regulations *Water Pollution Issues and Developments* Sarah V. Thomas, 2008 Pollution is undesirable state of the natural environment being contaminated with harmful substances as a consequence of human activities so that the environment becomes harmful or unfit for living things especially applicable to the contamination of soil water or the atmosphere by the discharge of harmful substances In addition to the harm to living beings both present or future and known or unknown pollution cleanup and surveillance are enormous financial drains of the economies of the world This book focuses on issues and developments critical for the field

Water Quality Management Asit Biswas, Cecilia Tortajada, Rafael Izquierdo, 2014-06-03 The global attention in recent years has focused primarily on water quantity and allocation issues Water quality has received significantly less attention than water quantity Commendable progress has been made by the developed world to control point sources of pollution but commensurate progress in reducing non point sources has not been made In the third world countries both point and non point sources of pollution are becoming increasingly a serious concern Already nearly all water bodies in such countries near and around urban centres have been severely polluted with very high health and environmental costs The book assesses the current status of water quality management in both developed and developing worlds as well as analysing the effectiveness of economic instruments and legal and institutional frameworks to control water contamination It outlines the importance of building up social and political awareness to reverse the trend of continuing water quality deterioration which is likely to be a most challenging task in the coming years This book was published as a special issue of International Journal of Water Resources Development

Sustainable Agriculture Christine Jakobsson, 2012 *Water Policy and Management in Spain* Francisco González-Gómez, Miguel A. García-Rubio, Jorge Guardiola, 2016-04-08 Spain is facing an increasingly difficult situation in terms of water stress This is an issue that is due mostly to poor management practices in all sectors Large amounts of water have been used for agricultural purposes at very low prices for too long there is an uncontrolled use of most aquifers in rural areas which result from ineffective control by the public administration per capita consumption continues increasing as well as water used for industrial and energy generation the construction and tourism sectors and for recreation activities In fact they have all exerted additional pressure on available water resources In order to face the above challenges water policy has made a gradual shift towards more rational and sustainable management of water resources This has also been influenced by the European Water Framework Directive about which as the book discusses there are both myths and misunderstandings This book analyses the very complex position of all sectors in the country the alternatives available and the challenges ahead In so doing it makes an important contribution to the literature on water resources management This book was published as a special issue of the International Journal of Water Resources Development

The European Model of Agriculture Michael Cardwell, 2004 Michael Cardwell s study assesses whether

the EU can create a new legislative framework that is feasible and which will placate the WTO and its drive towards world domination

Agriculture, Trade and the Environment The Pig Sector OECD,2003-10-02 This OECD study takes an in depth look at the pig sector in OECD countries and draws some conclusions about the most appropriate forms of policy intervention It argues that liberalising trade is likely to generate some environmental benefits

Sustainable Water Quality Management Policy C. Pharino,2007-05-27 After the success of the Acid Rain Program pollution trading became a more acceptable policy in dealing with pollution problems Trading of pollution credits and allowances helps to achieve environmental goals faster and more co effectively Although for the past 20 years water pollution trading had been in effect for as long as air pollution trading many water quality trading programs as compared to air pollution trading programs lack success in the implementation of trading The motivation factor for my work came from an interest in learning and understanding what the differences were that culminated in different levels of success being achieved between water pollution trading programs and air pollution trading programs Moreover another incentive was not only to understand what the role of trading should be for managing water quality but also how to better improve the water quality trading programs in order to become successful This book focuses on the examination of problems existing within a mark based system for water pollution control policy in the United States and provides essential information for introducing market based instruments for water quality management presents general situations where trading may or may not work and offers a recommendation for those interested in developing new water trading programs as a suitable option for solving localized water pollution for ne tuning the system after implementation and for overcoming trading obstacles The book is divided into 5 chapters

Ecological Modernisation Around the World Arthur P.J. Mol,David A. Sonnenfeld,2014-04-08 The idea of ecological modernisation originated in Western Europe in the 1980s gaining attention around the world by the late 1990s At the core of this social scientific and policy oriented approach is the view that contemporary societies have the capability of dealing with their environmental crises Experiences in some countries demonstrate that modern institutions can incorporate environmental interests into their daily routines Elsewhere economic and political interests dominate development trajectories and environmental deterioration continues challenging the premises of ecological modernisation This volume brings together research on ecological modernisation practices around the world Studies on Western Central and Eastern Europe the USA and Southeast Asia examine the applicability of this approach to advanced industrial countries transitional economies and developing countries respectively Authors critically examine the premises of ecological modernisation theory assess its value for understanding past and present environmental transformations and outline paths for designing future sustainable development Taken together the studies in collected this volume offer significant refinements extensions and critiques of ecological modernisation theory and suggest important directions for future research on social and policy dimensions of environmental change
