Over the last forty years the field of public economics has emerged as a modern successor to public finance. It has gained importance on the research agenda of economists and in the curricula of economics departments. It has become a diversified field rich in theoretical developments and substantive applications. Beyond the traditional concerns with taxation or public goods, a number of new concerns have entered the scene concerning for instance public sector pricing, the management of public firms, social security or federalism. A comprehensive presentation of the field extends nowadays beyond the scope of textbooks and requires access to a growing specialised literature. The present volume, collecting 22 papers published by Henry Tulkens over the period 1978-2003, is offered as an illustration of these new developments. The illustration has three dimensions: approach, subject matters and methods. Coming from a single author, admittedly assisted by 18 co-authors, the different papers are illustrative of an underlying general approach which I like to label operational public economics. With these simple words I mean an approach under which issues in public economics are formulated so as to capture essential elements of actual situations. Typically, this leads to theoretical models more complex than standard textbook formulations. It is then up to the public economist to extend the theory as needed to fit the situation.

*Distributional Aspects of Energy and Climate Policies* Mark A. Cohen, Don Fullerton, Robert H. Topel, 2013-05-31

Governments around the globe have begun to implement various actions to limit carbon emissions and so combat climate change. This book brings together some of the leading scholars in environmental and climate economics to examine the distributional consequences of policies that are designed to reduce these carbon emissions. Whether through a carbon tax, cap and trade system or other mechanisms, most proposals to reduce carbon emissions include some kind of carbon pricing system, shifting the costs of emissions onto polluters and providing an incentive to find the least costly methods of abatement. This standard efficiency justification for pricing carbon also has important distributional consequences, a problem that is often ignored by economists while being a major focus of attention in the political arena. Leading scholars in environmental and climate economics take up these issues to examine such questions as: Will the costs fall on current or future generations? Will they fall on the rich, poor, middle class or on everyone proportionally? Which countries will benefit and which will suffer? Students and scholars interested in climate change along with policy makers will find this lively volume an invaluable addition to the quest for information on this globally important issue.
